OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, Associate Commissioner
The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year $\$ 25$ domestic, and $\$ 31.25$ foreign. Single copy domestic, $\$ 4$; foreign, $\$ 5$. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $\$ 125$ in contiguous U.S. and Hawaii; $\$ 135$ in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Washington, D.C. and at additional mailing offices.

# CPI Detailed Report Data for June 1985 

## Contents

## Price Movements June 1985

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.3 percent before seasonal adjustment in June to a level of $322.3 \quad(1967=100)$. For the 12-month period ended in June, the CPI-U increased 3.7 percent.
The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.3 percent in June, prior to seasonal adjustment. The June 1985 CPI-W level of 318.7 was 4.1-percent higher than the index in June 1984. The CPI-w is used for indexing Social Security and some other Federal payments. It is also commonly used as an escalator in collective bargaining agreements.

## CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.2 percent in June, the same as in May. The housing component, which accounted for virtually all of the May increase, rose only half as much in June. This slowdown was offset by the modest accelerations in all other major groups.

During the first 6 months of 1985, the CPI-U rose at a seasonally adjusted annual rate of 3.7 percent-increasing at a 4.1-percent rate in the first quarter and a 3.3-percent rate in the second quarter. The 3.7-percent rate during the first half of 1985 compares with a 3.9-percent annual rate over the period of relatively constant overall price change from September 1981 to

December 1984. About two-thirds of the increase in the overall CPI in the first half of 1985 was accounted for by the housing and transportation components-largely due to higher prices for shelter and gasoline. These groups and the apparel and upkeep component advanced at slightly faster rates in the first half of 1985 than during the preceding September 1981 to December 1984 period. Other major groups rose more slowly in the first half of 1985.

The June advance of 0.3 percent in the housing component, followed a 0.6 -percent rise in May. A smaller increase in shelter costs-up 0.4 percent in June after advancing 1.0 percent in May-and a decline in the index for household furnishings and operations were responsible for the moderation. Within the shelter component, renters', homeowners', and maintenance and repair costs, each advanced 0.4 percent. The index for fuels and utilities rose 0.6 percent in June, after increasing 0.2 percent in May. Sharp increases in charges for electricity-up 1.3 percent-and local telephone serv-ices-up 4.6 percent-were primarily responsible. The rise in local telephone service charges was primarily the result of the $\$ 1$ access charge which was added to most local service bills in June. On the other hand, the interstate long distance index declined 2.8 percent in June. (Local telephone charges are priced monthly in all areas; long distance charges are priced every other month in most areas.) The indexes for fuel oil and natural gas

declined in June. Despite increases earlier this year, fuel oil prices declined 2.8 percent during the first half of 1985 and are 15.3 percent below their peak level of April 1981.

The 0.1 -percent rise in the food and beverage component was the first increase since February. Grocery store food prices declined for the fourth consecutive month, but by less than in May. In June, the index for meats, poultry, fish, and eggs registered its first increase since December 1984. Increases in prices for poultry, fish, and eggs were only partially offset by the declines in beef and pork prices. During the first 6 months of 1985, beef prices have declined 6.7 percent, while pork prices have been virtually unchanged. The index for fruits and vegetables declined for the fourth consecutive month. These declines have now more than offset the sharp increases recorded earlier this year. Prices for dairy products declined 0.2 percent, and the index for cereal and bakery products rose 0.4 percent. The other two components of the food and beverage index-restaurant meals and alcoholic beverages-were up 0.6 percent and unchanged, respectively.

The transportation component declined for the second consecutive month, following large increases in March and April. Used car and gasoline prices have been primarily responsible for this slowdown. After advancing substantially in the first quarter, used car prices declined in the second quarter, with large decreases in both May and June. Gasoline prices, following declines in January and February, turned sharply upward in March and April, before moderating substantially in the past 2 months. With a 0.2-percent increase in June, gasoline prices have risen 7.6 percent in the past 4 months. Despite this recent advance, gasoline prices are 11.0 percent below their peak level of March 1981. On the other hand, new car prices-up 0.3 percent-registered their first increase since March. Automobile finance charges declined for the seventh consecutive month, but by less than in May. The index for public transportation increased 0.2 percent in June, slightly more than in May.

The medical care component rose 0.7 percent in June, following increases of 0.6 percent in each of the preceding 2 months. The index for medical care com-modities-prescription drugs, nonprescription drugs, and medical supplies-rose 0.9 percent. The cost of medical care services advanced 0.6 percent with professional services and hospital rooms up 0.4 and 0.8 percent, respectively.

The 0.5 -percent rise in the entertainment index was attributable to sharp increases in prices for magazines, periodicals, and books, for admissions to movies, sporting events, theaters, and musical events, and for fees for participant sports. The index for other goods and services also increased 0.5 percent in June.

## CPI for Urban Wage Earners and Clerical Workers (CPI-W)-seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in June, the same increase as in the CPI-U. (The rental equivalence approach to homeownership has been used in the CPI-W since January 1985. The methodology and samples of areas, items, outlets, and prices are identical in both the CPI-W and the CPI-U, and differences in monthly changes result only from different expenditure patterns and seasonal adjustment factors.)

## Changes in frequency of publication for local area CPI's to begin in 1987

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently.

The changes in publication frequency arise from the requirement to allocate the sample to reflect population shifts in the 1980 Census so as to provide the most accurate national CPI possible with the funds available. As a result, some local areas will no longer have samples sufficient to permit more frequent publication.

In addition to the national index for all cities, the Bureau now publishes indexes for 28 urban areas. In 1987, it will continue to publish indexes for all but one of these areas-Northeast Pennsylvania (Scranton-Wilkes-Barre).

Of the remaining 27 published urban areas, 13 will have a reduction in frequency beginning in 1987. The index for Detroit, currently published monthly, will be published only in the even-numbered months. Twelve areas now published bimonthly will be compiled on a semiannual average basis. These areas are: BuffaloNiagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Kansas City, MO-Kansas City, KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Atlanta, GA; Anchorage, AK; Denver-Boulder, CO; Honolulu, HI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA. These semiannual average indexes, which refer to the arithmetic averages of the 6 month periods from January through June and July through December, will be published with release of the CPI for July and January, respectively, i.e., in the months of August and February. These series will be compiled and published on their present reference base $1967=100$, for all areas other than Anchorage,
which is on an October 1967 reference base. Also, the Cleveland-Akron-Lorain, OH , indexes will be published in odd-numbered rather then even-numbered months.
Further details are available from BLS.

## Homeownership changes

As announced in October 1981, the Bureau of Labor Statistics has changed the treatment of homeownership costs in the CPI for Urban Wage Earners and Clerical Workers (CPI-W) effective with release of data for January 1985. See the last page of the Technical Notes for additional detail.

## Relative Importance tables

Data are now available from the Bureau's annual publication, Relative Importance of Components in the Consumer Price Indexes, 1984, Bulletin 2233. The relative importance (value weights) data in the bulletin can be used in conjunction with the CPI Detailed Report. The bulletin may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402; Price, \$1.75; GPO Stock Number, 029-001-02844-0.

[^7]A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D . Less than 75,000.
Population size class $A$ is the aggregation of population size classes A-1 and A-2.
NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

1 Index is on an April $1967=100$ base in Northeastern Pennsylvania and Portland, Oreg.Wash.
${ }_{2}$ Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.
${ }^{3}$ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$
C - 75,000 to 385,000 .
D - Less than 75,000
Population size class $A$ is the aggregation of population size classes A-1 and A-2.

Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.
1- January, March, May, July, September, and November.
2 - February, April, June, August, October, and December
Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, III.-
Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A- 2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000
Population size class $A$ is the aggregation of population size classes $\mathrm{A}-1$ and $\mathrm{A}-2$.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

1 The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000. A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000 .

Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }_{2}$ Indexes on a December 1982=100 base.
${ }^{3}$ Indexes on a June $1978=100$ base.
${ }^{4}$ Indexes on an August 1981=100 base.

- Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

| A-1 - | More than $4,000,000$. |
| :--- | ---: |
| A-2 $-1,250,000$ to $4,000,000$. |  |
| B $-\quad 385,000$ to $1,250,000$. |  |
| C $-r$ | 75,000 to $385,000$. |

Population size class $A$ is the aggregation of population size classes A-1 and A-2.
${ }_{2}$ Indexes on a December $1984=100$ base.
${ }^{3}$ Indexes on a June 1978=100 base.
4 Indexes on an August 1981=100 base.

I The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000 .

Population size class $A$ is the aggregation of population
size classes A-1 and A-2.
${ }^{2}$ Indexes on a December $1984=100$ base.
${ }^{3}$ Indexes on a June 1978 = 100 base.
4. Indexes on an August $1981=100$ base.

Foods, fuels, and several other items priced every month in all areas most other goods and services priced as indicated:

M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.
Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, III.-
Northwestern Ind. are the more extensive Standard Consolidated Areas.
Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.
${ }_{3}$ Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 . More than $4,000,000$
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000.
Population size class $A$ is the aggregation of population size classes A-1 and A-2.
NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

${ }^{1}$ Index is on an April $1967=100$ base in Northeastern Pennsylvania and Portland, Oreg.Wash.
${ }_{2}$ Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.Northeastern N.J. and Chicago, III.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

3 Regions are defined as the four Census regions.
The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than $4,000,000$.
A-2 - $1,250,000$ to $4,000,000$.
B - 385,000 to $1,250,000$.
C - 75,000 to 385,000 .
D - Less than 75,000.
Population size class $A$ is the aggregation of population size classes A-1 and A-2.

${ }^{1}$ Areas on pricing schedule 1 (See footnote 1, Table 18) will appear next month.
${ }^{2}$ For the following areas the $1957-59=100$ base is not available; indexes are on the bases listed below:

> s are on the bases listed below: Buffalo, N. Y....................................................................................................... $1963=100$. Dallas-For Worth, $1963=100$. Honolulu, Hawaii..........

3 Indexes on a January 1981 = 100 base.
4 Indexes on a June $1978=100$ base, except in Buffalo, N.Y. where $1967=100$.
5 Indexes are on the bases listed below:
Atlanta, Ga...................................December 1977=100.
Buffalo, N. Y..................................................February $1978=100$.

Cleveland, Ohio...........................February 1978 $=100$
Dallas-Fort Worth, Tex.................February $1978=100$
Honolulu, Hawaii..........................December 1977=100
Houston, Tex................................April $1978=100$.
Kansas City, Mo.-Kans................................................. $1977=100$
Minneapolis-St. Paul, Minn.-Wis..April 1978 $=100$
Pittsburgh, Pa..............................April $1978=100$.
San Francisco-Oakland, Calif......December 1977=100
6 Indexes on a June 1978=100 base
Indexes on a June $1978=100$ base, except in Minneapolis-St. Paul, Minn.-Wis. where $1967==100$

Table 28(OS). Consumer Price Index for Urban Wage Earners and Clerical Workers (Old Series): Cross classification of region and population size class,' by expenditure category and commodity and service group-Continued

## Technical Notes

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPIU . The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments-grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the
average change in prices for each area since the base period.

The index measures price changes from a designated reference date-1967-which equals 100.0 . An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period"market basket" of goods and services in the CPI has risen from $\$ 10$ in 1967 to $\$ 22.20$.

For further details see the following: The Consumer Price Index: Concepts and Content Over the Years, Report 517, revised edition (Bureau of Labor Statistics, May 1978); "The Revision of the Consumer Price Index," by W. John Layng, reprinted from the Statistical Reporter, February 1978, No. 78-5 (U.S. Dept. of Commerce), "Revisions in the Medical Care Service Component of the Consumer Price Index," by Daniel H. Ginsburg, Monthly Labor Review, August 1978; and CPI Issues, Report 593, (Bureau of Labor Statistics, February 1980).

## Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12 -month period.

| $\quad$ Index Point Change |  |
| :--- | ---: |
|  |  |
| CPI | 236.4 |
| Less previous index | 233.2 |
| Equals index point change | 3.2 |
| Percent Change |  |
|  |  |
|  |  |
| Index point difference | 3.2 |
| Divided by the previous index | 233.2 |
| Equals | 0.014 |
| Results multiplied by one hundred | $0.014 \times 100$ |
| Equals percent change | 1.4 |

## Homeownership Changes

Effective with data for January 1985, the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-w) has been changed to incorporate a rental equivalence measure of homeownership costs. The Bureau of Labor Statistics announced plans to change the treatment of homeownership costs on October 27, 1981. Effective with release of the index for January 1983, the BLS had made the same changes in the way in which homeownership costs were measured in the CPI for All Urban Consumers (CPI-U).

The rental equivalence approach calculates shelter cost of homeownership based on the implicit rent owners would have to pay to rent the homes they own. The old method calculated homeownership costs as home purchase, mortgage interest costs, property taxes, property insurance, and maintenance and repair. As with the CPI-U, the new homeownership component has been introduced into the CPI-W in such a manner that the indexes using the old and new methods were equal in the socalled link month-December 1984 for the CPI-W. BLS calculated and has available the CPI-W using the old homeownership approach for the 6 -month period from January to June 1985. For more information, see the CPI Detailed Report for January 1983, pp. 7-13.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics
publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year-such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1980 through 1984 were replaced at the end of 1984 . The seasonal movement of all items and 44 other aggregations is derived by combining the seasonal movement of 51 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 51 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period. If any of the 51 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted data will be used for the last 5 years, but not seasonally adjusted indexes will be used before that period.

## Bureau of Labor Statistics Regional Offices

## Region I

Suite 1603
John F. Kennedy Federal Building
Government Center
Boston, Mass. 02203
Phone: (617) 223-6761

## Region II

Suite 3400
1515 Broadway
New York, N.Y. 10036
Phone: (212) 944-3121

## Region III

3535 Market Street
P.O. Box 13309

Philadelphia, Pa. 19101
Phone: (215) 596-1154

Region IV
1371 Peachtree Street, N.E. Atlanta, Ga. 30367
Phone: (404) 881-4418
Region $V$
9th Floor
Federal Office Building 230 S. Dearborn Street Chicago, III. 60604
Phone: (312) 353-1880

## Region VI

U.S. Department of Labor

Bureau of Labor Statistics
Federal Building
525 Griffin St., Rm. 221
Dallas, Tex. 75202
Phone: (214) 767-6971
