BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year \$16 domestic, and \$20 foreign. Single copy domestic, \$6; foreign, \$7.50. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Scheduled Release Dates			
Consumer Price Index data are scheduled for initial release on the following dates:			
<i>Index month</i>	<i>Release date</i>	<i>Index month</i>	<i>Release date</i>
July	August 21	October	November 20
August	September 23	November	December 18
September	October 23	December	January 20

NOTE: Effective with the release of the January 1988 CPI, the official reference base will be changed from 1967=100 to 1982-84=100. See page 6.

As noted earlier, since release of the January 1987 index, the Consumer Price Indexes have been calculated on a revised basis, using 1982-84 expenditure patterns and updated population weights. In addition, a number of technical improvements have been made. Over the next 2 years, additional improvements also will be introduced. See page 5 for more revision information.

Price Movements

June 1987

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.4 percent before seasonal adjustment in June to a level of 340.1 (1967=100). For the 12-month period ended in June, the CPI-U has increased 3.7 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.4 percent in June, prior to seasonal adjustment. The June 1987 CPI-W level of 334.9 (1967=100) was 3.7 percent higher than the index in June 1986.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.4 percent in June, about the same as in each of the preceding 4 months. Advances in food and energy prices accounted for more than 60 percent of the increase in the overall June CPI. The 0.7-percent rise in the food index was largely due to further increases in prices for beef, pork, and fresh fruits and vegetables. Energy costs, which had risen substantially in each of the first 3 months of 1987 before subsiding in April and May, rose 1.5 percent in June, primarily reflecting increases in the indexes for electricity and gasoline. Excluding food and energy, the CPI-U increased 0.2 percent in June. This compares with an average monthly increase of 0.4 percent in the first 5 months of the year.

During the first 6 months of 1987, the CPI-U rose at a seasonally adjusted annual rate (SAAR) of 5.4 percent. The rate of increase slowed from 6.2 percent in the first quarter to 4.6 percent in the second quarter. The 5.4-percent rate during the first half of 1987 compares with a 1.1-percent increase in 1986 and advances of about 4 percent in each

of the preceding 4 years. The sharp turnaround in energy prices—up at an annual rate of 16.7 percent in the first half of 1987 after declining 19.7 percent in 1986—was the primary factor in the larger increase in the overall index in the first half. The CPI excluding energy also rose at a more rapid pace in the first 6 months of 1987. Prices for nonfood-nonenergy commodities picked up quite rapidly with the largest advances being for clothing and used cars. The indexes for food and shelter each advanced at a somewhat faster rate during the first half of 1987 than in the preceding year. Charges for other services, however, slowed down in the first half of the year. The annual rates for these groups during the last several years and the first half of 1987 are shown below.

	Percent changes 12 months ended December					SAAR 6 months ended June

The food and beverage index rose 0.7 percent in June following a 0.6-percent increase in May. Grocery store food prices advanced 0.8 percent in June, reflecting sharp increases in the indexes for meat, poultry, fish, and eggs and fruits and vegetables. Beef and pork prices advanced 2.1 and 2.3 percent, respectively. In the past 12 months, beef prices have risen 12.3 percent and pork prices, 15.8 percent. On the other hand, poultry prices—down 1.0 percent in June—declined for the tenth consecutive month. Prices for fresh fruits and vegetables, on average, rose 3.9 percent in June and 19.5 percent in the past 12 months. Prices for other grocery store food groups were, on average, unchanged in June with a slight increase in prices for cereal and bakery products offset by a 0.2-percent decline in the index for dairy products. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—both increased 0.5 percent.

Housing costs rose 0.3 percent in June following a 0.2-percent increase in May. The indexes for fuel and other utilities and household furnishings and operations, which were unchanged in May, advanced 0.8 and 0.2 percent, respectively, in June. The index for electricity rose 2.5 percent. Charges for natural gas increased 0.4 percent following seasonal adjustment. Despite the June advances, the indexes for electricity and natural gas were both lower than in June 1986. Fuel oil prices declined 0.3 percent in June, but have increased 17.9 percent in the first 6 months of 1987. However, as of June these prices were 31.6 percent lower than their peak level of April 1981. Among other utilities, the index for telephone services declined 0.7 percent in June, reflecting declines in charges for local and intrastate toll calls. Shelter costs continued to slow in June, increasing 0.2 percent. Within shelter, renters' costs rose 0.4 percent; homeowners' costs, 0.1 percent; and maintenance and repair costs, 0.8 percent.

The transportation index rose 0.5 percent in June following a 0.3-percent increase in May. Prices for motor fuels advanced 1.3 percent in June, after registering their smallest increase this year in May. Gasoline prices have increased 16.4 percent in the first 6 months of 1987, but remain well

below—29.2 percent as of June—their peak level of March 1981. Used car prices continued to advance, increasing 1.1 percent in June and 8.3 percent in the first 6 months of 1987. New car prices rose 0.4 percent in June and 0.5 percent so far in 1987. The index for automobile finance charges registered its second consecutive increase—up 1.3 percent in June—after declining sharply earlier this year. The cost of automobile insurance, after advancing at double-digit rates in 1985 and 1986, continued its more moderate behavior in 1987, increasing 0.6 percent in June and at a 6.8-percent annual rate in the first 6 months. The index for public transportation recorded its third consecutive decline, again due to a drop in airline fares.

The index for apparel and upkeep declined 0.8 percent in June after advancing 4.6 percent in the first 5 months of 1987. Larger than usual end-of-season price reductions, particularly for women's and girls' apparel, were responsible for the June decline.

The medical care component advanced 0.7 percent in June to a level 6.8 percent above a year ago. In June, the index for medical care commodities—prescription drugs, non-prescription drugs, and medical supplies—increased 0.9 percent. The index for medical care services rose 0.6 percent, with the cost of professional services up 0.7 percent and hospital and related services up 0.8 percent.

Entertainment costs continued to advance moderately, increasing 0.1 percent in June and at a 3.3-percent annual rate in the first 6 months of 1987.

The index for other goods and services rose 0.6 percent in June, the same as in May, and has increased at an 8.0-percent annual rate so far this year. Prices for tobacco and smoking products increased 0.5 percent in June and at an 8.6-percent annual rate in 1987.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.4 percent in June.

CPI (old series)

For the first 6 months of 1987, BLS has continued to calculate the old series CPI-U and old series CPI-W based on the 1972-73 expenditure patterns used in the CPI from 1978

through 1986. This will be the last month for which these data are published. The latest old series data are contained in tables OS-1 through OS-4. In June, the old series CPI-U and the old series CPI-W both increased 0.6 percent. (These series are not seasonally adjusted.)

Consumer Price Index Revision

The Bureau of Labor Statistics introduced a revised Consumer Price Index (CPI) with the release of the January 1987 index in February 1987. As a result of the revision, both the CPI-U and the CPI-W now use updated expenditure weights based upon data tabulated from 3 years (1982, 1983 and 1984) of the Consumer Expenditure Surveys, replacing the old expenditure weights based on 1972-73 data. The Bureau periodically revises the expenditure weights so that the CPI reflects price changes of items currently being purchased by consumers.

A greatly enhanced housing survey designed to improve the rental equivalence measure of homeownership costs in both the CPI-U and CPI-W was introduced with release of the January 1987 CPI. The selection of the new housing sample is structured to represent optimally both owners and renters in the estimation of shelter costs.

In addition, a number of methodological and sampling advances first introduced in the 1978 revision were enhanced and incorporated into the CPI for January 1987. For example, the selection of the urban areas and the allocation of outlet samples in which prices are collected for the CPI were done by the Bureau with the primary objective of producing the most accurate national CPI possible with the funds available. The CPI revision was begun as a 5-year project in 1984. In addition to the new expenditure weights and enhancements introduced with the January 1987 CPI, other technical improvements will be introduced over the next 2 years. (See, for example, "Adjustment of Shelter Indexes for Aging Effects," page 5.)

Also, the January 1987 index was based for the first time on the geographic distribution of consumers as of the 1980 Census of Population. The previous CPI used the 1970 Census of Population. The requirement to allocate the sample so as to provide the most accurate national CPI has resulted in some local areas not having samples sufficient to permit frequent publication. Therefore, effective with release of the data for January 1987, a number of local area CPI's are now published less frequently. The areas affected by the changes in publication are identified later in this article.

Both of the CPI's are linked to the indexes for December 1986 to provide a continuous series. The linking was accomplished by setting the index levels of the revised CPI, with the updated expenditure weights and samples, equal to the index levels published for the previous series in December 1986. Each index has been moved upward or downward from the December 1986 level in accordance with subsequent changes in prices.

As in the past, the Bureau is publishing selected indexes using the old expenditure weights for 6 months after the issuance of the revised CPI. In order to conserve resources,

the overlap indexes will differ from the revised indexes only in their expenditure weights. Unlike earlier revisions, the overlap indexes are not based on the old sample of items and outlets. The reference base period for revised CPI indexes issued for January 1987 is 1967=100, the same as for the previous indexes: As described below, this reference base period will be changed to 1982-84=100 effective with the CPI for January 1988.

In addition to the national all-city average CPI-U and CPI-W indexes, the Bureau previously published indexes for 28 local areas. In 1987, the Bureau is publishing indexes for all but one of these areas—Northeast Pennsylvania (Scranton-Wilkes-Barre). Because of the requirement to allocate the sample to provide the most accurate national CPI possible, however, 14 of the remaining 27 published areas have had a change in the frequency of their publication.

Based on population growth since 1970 and the expanded definitions of the Consolidated Metropolitan Statistical Areas issued by the Office of Management and Budget, the San Francisco-Oakland-San Jose area has replaced the Detroit-Ann Arbor area as the fifth largest area covered by CPI indexes. For that reason, the San Francisco area is now published monthly while the Detroit area is published only for even-numbered months rather than monthly.

Indexes for 12 areas previously published bimonthly are now compiled on a semiannual average basis. These areas are: Buffalo-Niagara Falls, N.Y.; Cincinnati-Hamilton, Ohio-Ky.-Ind; Kansas City, Mo.-Kansas City, Kan.; Milwaukee, Wis.; Minneapolis-St. Paul, Minn.-Wis.; Atlanta, Ga.; Anchorage, Alaska; Denver-Boulder, Colo.; Honolulu, Hawaii; Portland-Vancouver, Ore.-Wash.; San Diego, Calif.; and Seattle-Tacoma, Wash.

The semiannual average indexes, which refer to the arithmetic averages of the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, i.e., in the months of August and February. These series are compiled and published on their previous reference bases, 1967=100 for all areas other than Anchorage, which is on an October 1967 reference base. Also, the Cleveland-Akron-Lorain, Ohio, indexes are now published for odd-numbered rather than even-numbered months.

Indexes were previously published bimonthly for 4 regions, 5 size classes, and 16 region-by-size groups. Beginning with January 1987, publication of these indexes is monthly; two of the size classes have been combined and two of the region-by-size groups (nonmetropolitan areas in the West and in the East) were eliminated.

Additional details on the revision are available from BLS.

Adjustment of Shelter Indexes for Aging Effects

Recent Bureau of Labor Statistics research demonstrates that the CPI's for residential rent and owners' equivalent rent should be adjusted for the effects of the aging of the housing units. Currently the BLS does not adjust for the fact that, on average, houses and apartments depreciate slowly through time. If the results from the revised shelter survey confirm

this initial result, then an aging adjustment will be introduced with the CPI for January 1988. (The research results indicate that annual changes for the residential rent and owners' equivalent rent indexes would be about 0.3 percent larger if aging adjustments were included.) The basic research papers on this topic are available from the BLS.

Consumer Price Indexes Will Shift to New Reference Base in 1988

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes will shift to a new reference base year. All indexes currently expressed on a base of 1967=100, or any other base through December 1981, will be rebased to 1982-84=100. Only indexes with a base later than December 1981 will keep their current bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with its longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in February 1971, when the current 1967 base was substituted for the former 1957-59 base. Historical data for each CPI series on the new base will be available from the Bureau of Labor Statistics. For the convenience of users, BLS will continue

to publish all items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors will also be available from BLS. Multiplication by one of these factors will rebase the related index series from its current base to a 1982-84 reference base. To help users in planning for this change, BLS is supplying the conversion factors for the U.S. City Average All Items CPI-U and CPI-W at this time; they are .3338279 and .3357176, respectively. As an example, the 1967=100-based U.S. City Average All Items CPI-U and CPI-W for January 1987 are 333.1 and 327.7 respectively. When multiplied by the appropriate rebasing factor, these indexes become 111.2 and 110.0, respectively, on a 1982-84=100 base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor).

Chart 1: CPI-U: All items, food and beverages, 1976-87

* Percent changes over 12-month spans are calculated from unadjusted data. Percent changes over 1-month spans are annual rates calculated from seasonally adjusted data.

Houston, Tex.	2		-	341.1	-	341.5	2.5	.1	-	-	-	-
Pittsburgh, Pa.	2		-	338.2	-	338.9	3.1	.2	-	-	-	-

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.
² Regions are defined as the four Census regions.
- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Pittsburgh, Pa.	2		-	316.6	-	317.8	3.1	.4	-	-	-	-

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 91 urban areas across the country from about 60,000 housing units and approximately 21,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 91 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross calculations of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1967, which equals 100.0. An increase of 203 percent, for example, is shown as 303.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$30.30.

For further details see BLS Handbook of Methods, Vol. II, "The Consumer Price Index," Bulletin 2134-2, April 1984 and "The Consumer Price Index: 1987 Revision," BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	315.5
Less previous index	303.5
Equals index point change	12.0
Percent Change	
Index point difference	12.0
Divided by the previous index	303.5
Equals	0.040
Results multiplied by one hundred	0.040 x 100
Equals percent change	4.0

Homeownership Changes

The Consumer Price Index (CPI) has been changed to incorporate a rental equivalence measure of homeowners' costs in accordance with plans announced by the Bureau of Labor Statistics (BLS) on October 27, 1981. For the CPI for All Urban Consumers (CPI-U), this change was effective with release of the index for January 1983 and for the CPI for Urban Wage Earners and Clerical Workers (CPI-W), it was effective with the release of the January 1985 index. The rental equivalence approach calculates shelter costs of homeowners based on the implicit rent owners would have to pay to rent homes that they own. The old method calculated homeownership as home purchase, mortgage interest costs, property taxes, property insurance, and maintenance and repairs. The new homeownership component was introduced into both the CPI-U and the CPI-W in such a manner that in each case the indexes using the old and new methodologies were equal in the so-called "link month"—December 1982 for the CPI-U and December 1984 for the CPI-W. For more information, see the *CPI Detailed Report* for January 1983, pp. 7-13.

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will appear. NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices, except for electricity, are collected monthly by BLS representatives in the urban areas priced for the CPI. Electricity prices are collected monthly on mail questionnaires by the Department of Energy for BLS. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P-2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are

calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas and for 500 kilowatt hours of electricity (table P-1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, to provide data for place-to-place price comparisons, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a per gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).

1 kwh = 3,412 BTU'S (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted, however, that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will

not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from BLS Regional Offices or from the Washington Office upon request.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11 ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1982 through 1986 were replaced at the end of 1986. The seasonal movement of all items and 43 other aggregations is derived by combining the seasonal movement of 50 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 50 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted indexes will be used before the period.
