OFFICE OF PRICES AND LIVING CONDITIONS
W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$18 domestic, and \$22.50 foreign. Single copy \$3.00. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$95 in contiguous U.S. and Hawaii; \$110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 1.1 percent before seasonal adjustment in July to 274.4 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 1.2 percent before seasonal adjustment in July to 274.6 (1967 = 100). Both the CPI-U and the CPI-W were 10.7 percent higher than in July 1980.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers advanced 1.2 percent in July, following increases of 0.7 percent in each of the preceding 2 months. The acceleration largely reflects increases in the housing, food and beverages, and transportation components. The housing component, primarily due to higher prices and mortgage interest rates, rose 1.6 percent. The index for food and beverages, which had increased at an average monthly rate of 0.1 percent during the first 6 months of 1981, advanced 0.8 percent in July. The transportation index also rose 0.8 percent in July, following a comparatively moderate increase in the second quarter. The medical care component increased substantially for the seventh consecutive month. The rise in the index for apparel and upkeep was larger than in recent months. On the other hand, both the entertainment and other goods and services components registered smaller increases than in the two preceding months.

A 2.1 percent increase in homeownership costs

accounted for about three-fourths of the 1.6 percent increase in the housing index in July. Home financing costs rose 3.2 percent, reflecting a 1.8 percent increase in house prices and a 1.3 percent increase in mortgage interest rates. The index for household maintenance and repairs rose 1.1 percent. Prices for fuel and other utilities advanced 1.5 percent, as charges for electricity, telephone services, and water and sewerage rose substantially. Charges for natural gas rose moderately, while prices for fuel oil declined for the fourth consecutive month. The index for household furnishings and operations rose 0.9 percent in July.

Grocery store food prices increased 0.9 percent in July, following a 0.1 percent rise in June and declines in the 2 preceding months. Substantial increases in the prices for beef, pork, poultry, and fresh fruits and vegetables were largely responsible for the acceleration. Egg prices declined, following a sharp increase in June. All other major grocery store food groups recorded either moderate increases or declines in July. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.7 and 0.6 percent, respectively.

Substantial increases in the indexes for public transportation and used cars coupled with a smaller decline in gasoline prices were largely responsible for the acceleration in the transportation component. A 14.7 percent advance in intracity mass transit fares and large increases in airline, intercity bus, and taxi fares resulted in a 6.3 percent increase in the public transportation

Other goods and services6	.6	.7	.6	1.2	.6	.6	10.0	9.2

component. Used car prices rose 2.0 percent in July, following a 1.2 percent increase in June. Both the indexes for new cars and automobile finance charges continued to increase, but not by as much as in recent months. Gasoline prices, on the other hand, continued to decline—down 1.0 percent in July—but by less than in each of the preceding 3 months.

The medical care index increased 1.3 percent in July. Professional service charges—physicians', dental, and other professional services—rose 1.7 percent. The index for hospital rooms increased 1.2 percent in July, following a 1.4 percent increase in June. The index for medical care commodities, which includes prescription and non-prescription drugs and medical supplies, advanced 0.9 percent, the same as in June.

The index for apparel and upkeep rose 0.5 percent in July. Seasonal sales were prevalent, but most clothing items registered small increases, following seasonal adjustment. Charges for apparel services rose 0.9 percent in July.

The indexes for entertainment and other goods and services rose 0.2 and 0.6 percent, respectively, in July, following increases of 0.4 and 0.7 percent in June.

CPI-U Experimental Measures

BLS publishes in each release experimental CPI-U measures using alternative homeownership approaches. (See table C for monthly data on all alternative measures of homeownership.) July increases in these indexes ranged from 0.8 to 1.1 percent, after seasonal adjustment. The most closely watched experimental measures—the CPI-U All Items using rent substitution (X-1) and the CPI-U All Items using outlays with average interest costs (X-5)—both increased 0.8 percent in July. The 12-month changes in the CPI-U All Items from July 1980 were 9.6 percent for X-1 and 10.3 percent for X-5. The official CPI-U rose 10.7 percent over this period.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.2 percent. The housing component rose 1.8 percent and accounted for about two-thirds of the July increase. Homeownership costs advanced 2.4 percent, reflecting a 1.9 percent increase in house prices and a 1.4 percent increase in mortgage interest rates. The index for fuel and other utilities advanced 1.6 percent. Charges for electricity, telephone, and water and sewerage services rose sharply. The food and beverage component, which had increased 0.5 percent throughout the first 6 months of 1981, advanced 0.8 percent in July. Grocery store foods rose 0.9 percent primarily due to sharp increases in beef, pork, poultry, and fresh fruits and vegetables. The transportation component increased 0.9 percent as increases in public transportation, new and used car prices, and automobile finance charges offset a 0.9 percent decline in gasoline prices. Apparel prices rose 0.9 percent in July, following seasonal adjustment, and the index for medical care increased 0.7 percent. The indexes for entertainment and other goods and services rose 0.4 and 0.6 percent, respectively, in July, about the same as in June.

Conversion of the Consumer Price Index to 1977 = 100 Standard Reference Base

Background

Effective with release of the January 1982 index, the standard reference base period for both the Consumer Price index for All Urban Consumers (CPI-U) and Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) will be 1977 = 100. Rebasings of the CPI and other Federal indexes to 1977 is mandated by the Office of Federal Statistical Policy and Standards

Table C. Official CPI-U and experimental measures using alternative approaches to homeownership costs

NOTE: See Technical Notes for explanation of homeownership measures.

(OFSPS). The base period for general-purpose Federal index series is revised approximately every 10 years. In announcing the latest rebasing, OFSPS noted that base periods are changed in order to "facilitate the visual comprehension of rates of change from a base period that is not too distant in time."

ferences due to rounding, regardless of whether the 1967 = 100 or 1977 = 100 series is used. For example:

Base Period	Annual Average 1977 index	June 1981 index	Increase in index points	Percent increase
CPI-U (1967 = 100)	181.5	271.3	89.8	49.5
CPI-U (1977 = 100)	100.0	149.5	49.5	49.5

Effect of Conversion

Rebasing of the CPI is a straightforward arithmetic operation which does not alter the picture of economic events which it provides. Percent changes computed from the CPI will be the same, except for small dif-

ferences due to rounding, regardless of whether the 1967 = 100 or 1977 = 100 series is used. For example:

1977 = 100 reference base does not affect the continuity or statistical comparability of the index series.

Scope of conversion

All Consumer Price Index series which currently have a base period of January 1977 or earlier will be rebased. Historical data for rebased series will be available from the Bureau of Labor Statistics in machine-readable as well as hard-copy form. As a convenience to users, BLS will continue to publish all items indexes, for the U.S. city average and for the 28 local areas for which CPI's are available, on their current reference base, i.e., 1967 = 100, in most cases. Publication of index series on the 1957-59 = 100 reference base will be discontinued effective with release of data for January 1982.

Method of conversion

In practice, the BLS will convert the 1967 = 100 base CPI series to the 1977 = 100 base by dividing each value in the 1967 base series by its 1977 annual average, multiplying the result by 100, and rounding that product to one decimal place. For example, the U.S. city average all items CPI for June 1981 is 271.3 on the 1967 = 100 reference base. The 1977 annual average value for this series, again on the 1967 = 100 base, is 181.5. The June 1981 value for the CPI-U on the 1977 = 100 reference base is thus:

$$271.3/181.5 \times 100 = 149.5$$

From the equation, it can be seen that a 1967 base series can be derived from the 1977 based series:

$$149.5 \times 181.5/100 = 271.3$$

For users who wish to maintain a 1967 based series after introduction of the new reference base, BLS will publish a set of conversion factors, based upon the above relationship, which can be used to make the conversion from a 1977 base to a 1967 base. BLS will also publish conversion factors which will enable users to convert all items indexes on the 1977 base to the 1957-59 = 100 base.

Notes to Index Users

As noted earlier, percent changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1977 or 1967 base series. The same is not true, however, for changes measured in terms of index points. This can be seen clearly from the example given in the section "Effect of Conversion." Some escalator agreements, such as in wage or rental contracts, employ index point changes in CPI series for adjusting payments. Users who choose to switch from the old to the new reference base in such situations should be aware that doing so could have a substantial effect on their adjustments.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas priced on pricing schedule 2 (See table 13) will appear next month.

² Indexes on an October 1967 = 100 base unless otherwise indicated.

³ Indexes on a November 1977 = 100 base unless otherwise indicated.

⁴ The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

⁵ Indexes on a January 1981 = 100 base.

⁶ Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

⁷ Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978 = 100 base in Denver-Boulder, Col.

⁸ Indexes are on the bases listed:

Anchorage, Alaska.....January 1978 = 100.
Baltimore, Md.....March 1978 = 100.
Boston, Mass.....January 1978 = 100.

Cincinnati, Ohio-Ky.-Ind.....March 1978 = 100.

Denver-Boulder, Colo.....January 1978 = 100.

Miami, Fla.....November 1977 = 100.

Milwaukee, Wis.....November 1977 = 100.

Northeastern Pennsylvania.....November 1977 = 100.

Portland, Oreg.-Wash.....January 1978 = 100.

St. Louis, Mo.-Ill.....March 1978 = 100.

San Diego, Calif.....November 1977 = 100.

Seattle-Everett, Wash.....November 1977 = 100.

Washington, D.C.-Md.-Va.....November 1977 = 100.

⁹ Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 8.

¹⁰ The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

¹¹ Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

¹² Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas priced on pricing schedule 2 (See table 18) will appear next month.

² Indexes on an October 1967 = 100 base unless otherwise indicated.

³ Indexes on a November 1977 = 100 base unless otherwise indicated.

⁴ The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

⁵ Indexes on a January 1981 = 100 base.

⁶ Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

⁷ Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 8. Index on a January 1978 = 100 base in Denver-Boulder, Col.

⁸ Indexes are on the bases listed:

Anchorage, Alaska.....January 1978 = 100.
Baltimore, Md.....March 1978 = 100.
Boston, Mass.....January 1978 = 100.

Cincinnati, Ohio-Ky.-Ind.....March 1978 = 100.

Denver-Boulder, Colo.....January 1978 = 100.

Miami, Fla.....November 1977 = 100.

Milwaukee, Wis.....November 1977 = 100.

Northeastern Pennsylvania.....November 1977 = 100.

Portland, Oreg.-Wash.....January 1978 = 100.

St. Louis, Mo.-Ill.....March 1978 = 100.

San Diego, Calif.....November 1977 = 100.

Seattle-Everett, Wash.....November 1977 = 100.

Washington, D.C.-Md.-Va.....November 1977 = 100.

⁹ Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 8.

¹⁰ The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

¹¹ Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

¹² Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014×100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing

units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

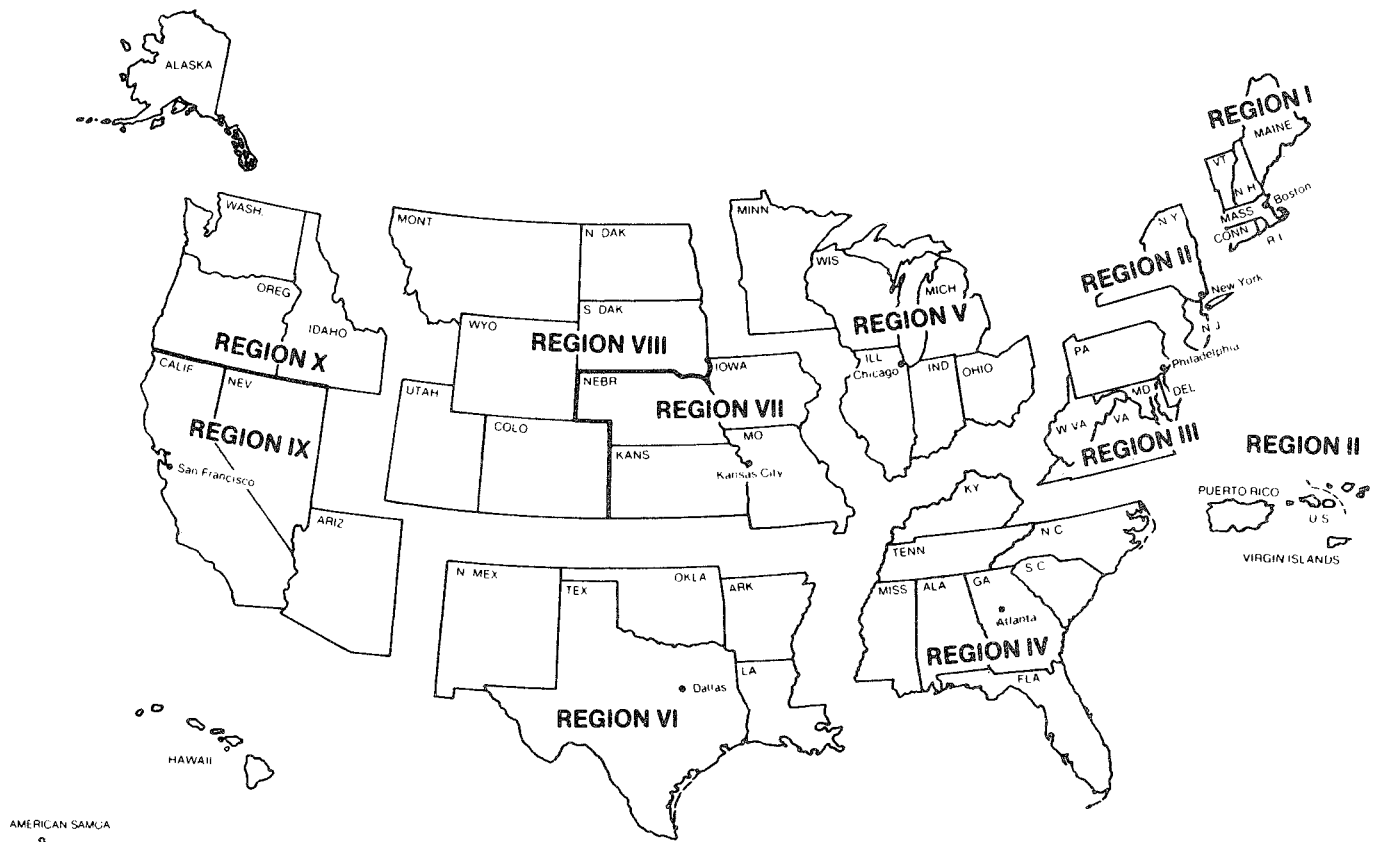

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowner population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: (1) The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.
