

CPI Detailed Report July 1983

U.S. Department of Labor
Bureau of Labor Statistics

U.S. DEPARTMENT OF LABOR
Raymond J. Donovan, *Secretary*

BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, *Associate Commissioner*

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$28 domestic, and \$35 foreign. Single copy \$5. Send correspondence on circulation and subscription matters (including addresses changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$125 in contiguous U.S. and Hawaii; \$135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Laurel, Md.

Price Movements

July 1983

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.4 percent before seasonal adjustment in July. The July level of 299.3 (1967 = 100) was 2.4 percent higher than the index in July 1982.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.3 percent in July, prior to seasonal adjustment, to a level of 298.2 (1967 = 100). For the 12-month period ended in July, the CPI-W has increased 2.2 percent. The CPI-W is used for indexing Social Security and some other Federal payments. It is also commonly used as an escalator in collective bargaining agreements.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.4 percent in July, following a 0.2 percent rise in June. For the first 7 months of 1983, the CPI-U rose at a seasonally adjusted rate of 3.2 percent. All major categories of consumer spending—other than entertainment—contributed to the modest acceleration in the overall CPI. The index for food and beverages declined, but by less than in the preceding month. All other major expenditure categories recorded moderate increases in July, except for the other goods and services index which registered a large gain.

The index for food and beverages recorded its second consecutive monthly decline. Grocery store food prices, which declined 0.6 percent in June, were down 0.1 percent in July. Continuing sharp drops in the indexes for beef, pork, and fish more than offset the small increases

in most other grocery store foods. Prices for all these items were below their levels of a year ago. Poultry prices were sharply higher in July, but remained below their July 1982 level. On the other hand, egg prices were down in July, although over the year they increased 2.5 percent. The index for fruits and vegetables rose 0.3 percent in July, but also remained below its level a year ago. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.1 and 0.2 percent in July, respectively.

The housing component rose 0.4 percent in July, following a 0.2 percent increase in June. All three major housing groups—shelter, fuel and other utilities, and household furnishings and operations—registered larger increases in July than in the preceding month. Shelter costs increased 0.5 percent, with renters' costs up 0.6 percent and homeowners' costs 0.5 percent higher. The 0.3 percent rise in the index for fuel and other utilities derives from small increases in prices for fuel oil and natural gas, a large rise in water and sewerage costs, and a slight drop in electricity charges. The index for household furnishings and operations increased 0.3 percent in July.

The transportation component advanced 0.5 percent in July, following a 0.4 percent increase in June. Used car prices rose 1.5 percent, following increases of 1.0 percent in each of the 2 preceding months. The acceleration in used car prices was partially offset by the moderation in prices for motor fuels and new vehicles. Gasoline prices rose 0.4 percent, following a 0.7 percent

increase in June and substantially larger increases in April and May. As of July, however, gasoline prices were still 9.4 percent below their peak level in March 1981. New car prices were unchanged in July, after registering a slight increase in June. On the other hand, the 0.3 percent decline in the automobile finance charge index—its 12th consecutive monthly decrease—was substantially less than the average monthly decline during the preceding 11 months. The index for public transportation rose 0.6 percent, the same as in June, reflecting increases in fares for airlines and intercity trains.

The July increase of 0.6 percent in the medical care component was somewhat more than the increases in each of the previous 4 months, though significantly less than the double-digit rates that prevailed during the past 4 years. The index for medical care commodities, which includes prescription and non-prescription drugs and medical supplies, increased 0.7 percent. Within medical care services, charges for professional services and hospital rooms rose 0.7 and 1.2 percent, respectively.

The index for apparel and upkeep advanced 0.6 percent in July, following a 0.4 percent increase in June. Seasonal July price reductions were, on average, less than during recent years. Charges for apparel services rose 0.6 percent.

The index for other goods and services registered an increase of 1.3 percent in July compared with 0.6 percent in June. A 3.3 percent rise in cigarette prices accounted for most of the increase. Since July 1982, cigarette prices have increased 25 percent, due in part to an increased Federal excise tax in January. The entertainment index rose 0.4 percent in July, the same as in June.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.3 percent in July, following a 0.2 percent increase in June. Most major categories of consumer spending contributed to the modest acceleration.

The 0.3 percent rise in the CPI-W compares with an increase of 0.4 percent in the CPI-U. The CPI-U uses a rental equivalence measure, which rose 0.5 percent in July, to measure shelter costs of homeowners. Homeownership in the CPI-W, which uses house prices, mortgage interest rates, property taxes, property insurance, and maintenance and repair costs, rose 0.1 percent in July. Small increases in mortgage interest rates, property taxes, and maintenance and repair costs offset a small decline in house prices. Property insurance costs were unchanged.

Announcement to Users: Homeownership Changes

Effective with release of the index for January 1983, the Bureau of Labor Statistics changed the way homeowner costs are measured in the CPI-U to rental equivalence. The rental equivalence approach calculates homeowner costs of the shelter based on the implicit rent owners would have to pay to rent the homes they own. The old method calculated homeowner costs as home purchase, mortgage interest costs, property taxes, property insurance and maintenance and repair.

As previously announced, the CPI-W will be changed to rental equivalence effective with data for January 1985. The CPI experimental measures, known as the CPI-U, X-1 through CPI-U, X-5 are no longer being published.

The new homeowners' cost component was introduced into the CPI-U in such a manner that the indexes using the old and new methodologies were equal in the so-called link month—December 1982. A similar technique will be employed for the CPI-W in December 1984. This technical procedure has been used in previous revisions of the CPI. In accordance with historical practice, the BLS made available calculations for the CPI-U from January to June 1983 based on the old method of homeownership. A 6-month overlap period for the CPI-W will also be made available to users; it will run from January to June 1985.

The new homeowners' cost component is similar to the one used in the CPI-U, X-1, with 4 important

refinements. First, BLS has calculated a set of owner weights for the individual units in the CPI rent sample. These new weights make the rent sample represent owner-occupied housing and permit the calculation of a rent change estimate for homeowners.

Second, the Bureau has augmented the rent sample in order to enhance the rental equivalence measure. This new sampling is concentrated in areas where the housing is predominantly owner occupied in order to increase the proportion of rental units that have characteristics similar to owner-occupied units.

Third, the expenditure weight for rental equivalence, which for the experimental index, X-1, was calculated by means of a short-cut method, has been recalculated using the complex statistical estimating procedure used for weights in the official CPI. In addition, the weights

associated with other homeowner expenditures for such things as insurance, appliances, and maintenance and repairs have been modified to be consistent with the rental equivalence concept. This enhancement has improved the quality of the national CPI's rental equivalence weight and provides weights for computation of local area CPI-U's using the rental equivalence approach.

Finally, the computer system which produces the CPI each month has been expanded to accommodate the calculation, with complete item and geographic detail, and with proper geographic weighting for the rental equivalence approach. BLS will continue to work on other refinements in the statistical estimating techniques used in the rental equivalence measure. A more detailed description of the methods employed is available from BLS on request.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas.

Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar.

Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

West/D	-9	1.4	-1.1	-1.4	-3.7	-3

¹ Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas on pricing schedule 2 (See table 13) will appear next month.
² Indexes on an October 1967=100 base unless otherwise indicated.
³ Indexes on a November 1977=100 base unless otherwise indicated.
⁴ The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1960=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.
⁵ Indexes on a November 1982=100 base.
⁶ Index on a June 1978=100 base in Miami, Fla.
⁷ Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla. Index on a January 1978=100 base in Denver-Boulder, Col.
⁸ Indexes are on the bases listed:
 Anchorage, Alaska.....January 1978=100.
 Baltimore, Md.....March 1978=100.
 Boston, Mass.....January 1978=100.
 Cincinnati, Ohio-Ky.-Ind.....March 1978=100.
 Denver-Boulder, Colo.....January 1978=100.
 Miami, Fla.....November 1977=100.
 Milwaukee, Wis.....November 1977=100.
 Northeastern Pennsylvania.....November 1977=100.
 Portland, Oreg.-Wash.....January 1978=100.
 St. Louis, Mo.-Ill.....March 1978=100.
 San Diego, Calif.....November 1977=100.
 Seattle-Everett, Wash.....November 1977=100.
 Washington, D.C.-Md.-Va.....November 1977=100.
⁹ Indexes on a June 1978=100 base.
¹⁰ Excludes motor oil, coolant, and other products as of January 1983.
¹¹ The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.
¹² Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.
¹³ Index on a June 1978=100 base in San Diego, Calif.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas.

Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar.

Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
 A-1 - More than 4,000,000.
 A-2 - 1,250,000 to 4,000,000.
 B - 385,000 to 1,250,000.
 C - 75,000 to 385,000.
 D - Less than 75,000.
 Population size class A is the aggregation of population size classes A-1 and A-2.

¹⁰ Excludes motor oil, coolant, and other products as of January 1963.
¹¹ The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.
¹² Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.
¹³ Index on a June 1978=100 base in San Diego, Calif.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 122 percent, for example, is shown as 222.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$22.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), *Revisions in the Medical Care Service Component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978; and *CPI Issues*, Report 593, (Bureau of Labor Statistics, February 1980).

A Note About Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	<u>3.2</u>
Divided by the previous index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changes, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation

purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1977 through 1981 were replaced at the end of 1981. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 45 selected components changes its seasonal status, seasonal data from 1967 forward for the all-items and for any of the 35 other aggregations that have that series as a component, are replaced.
