W. John Layng, Associate Commissioner

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscription price per year \$15 domestic, and \$18.75 foreign. Single copy \$2.25. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Fort Royal Road, Springfield, Virginia 22161. Subscription rates: \$95 in contiguous U.S. and Hawaii; \$110 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Controlled circulation postage paid at Riverdale, Md.

Price Movements

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in September to 251.7 (1967 = 100). The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent before seasonal adjustment in September to 251.9 (1967 = 100). The CPI-U was 12.7 percent higher and the CPI-W was 12.6 percent higher than in September 1979.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 1.0 percent in September. This compares with an increase of 0.7 percent in August, no change in July, and was about the same as during the second quarter this year. The food and beverage index rose 1.6 percent, the second consecutive large monthly increase. The housing component, which had been the major moderating influence on the CPI during the two previous months rose 0.7 percent in September. Mortgage interest rates continued to decline in September but by substantially less than in July and August. Increases in other categories of consumer spending, particularly apparel and upkeep, transportation, and other goods and services, were larger than in August.

For the 3 months ended in September, the CPI-U rose at a seasonally adjusted annual rate of 7.0 percent. This compares with increases of 18.1 percent during the first quarter and 11.6 percent during the second quarter. The housing component accounted for the slowdown in the third quarter. During the first 9 months

of 1980, the CPI-U increased at a seasonally adjusted annual rate of 12.1 percent.

Prices for grocery store foods advanced 1.9 percent in September, following increases of 1.2 and 2.3 percent in July and August, respectively. The index for meats, poultry, fish, and eggs rose 3.5 percent and accounted for about three-fifths of the increase. Beef, pork, and poultry prices all advanced sharply for the third consecutive month. Prices for fresh vegetables and sugar and sweets also rose sharply in September. On the other hand, most other food categories registered smaller increases in September than in August, and the index for dairy products declined 0.1 percent. Prices of the other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.9 and 0.5 percent, respectively.

The housing index rose 0.7 percent in September, largely because of higher shelter costs. The homeownership component advanced in September, following 2 months of declines. Home financing costs continued to decline, but by substantially less than in July and August, as a 1.6 percent drop in mortgage interest rates more than offset a 1.3 percent increase in house prices. (In August, mortgage interest rates dropped 4.3 percent and house prices rose 1.7 percent.) Charges for both property insurance and household maintenance and repairs accelerated in September, following moderate increases in July and August. The index for rent rose 1.0 percent. The index for household furnishings and operations registered the largest increase since March. Prices for household fuels, however, rose moderately

Other goods and services4	.5	.8	.8	.5	.6	1.6	11.2	9.2

for the second consecutive month. Fuel oil prices declined 0.1 percent, and charges for gas and electricity rose 0.7 percent.

The transportation component increased 1.2 percent in September, the largest monthly increase since March. Used car prices, which had been running below year earlier levels during most of this year, rose a sharp 5.6 percent. New car prices rose less in September than in August, 1.0 percent as compared with 1.7 percent. The index for public transportation rose 3.6 percent, reflecting large increases in airline and intercity bus fares. Gasoline prices declined for the fifth consecutive month.

The index for apparel and upkeep rose 1.3 percent in September, following substantially smaller increases in the preceding 5 months. Prices of most apparel commodities increased substantially in September, reflecting the continued introduction of fall and winter wear. The index for apparel services advanced 0.8 percent in September as charges for laundry and dry cleaning rose 1.2 percent.

The medical care index advanced 0.8 percent in September. Charges for hospital and other medical care services rose 1.3 percent, following increases of 1.5 percent in both July and August, while charges for professional services rose 1.0 percent. The index for medical care commodities registered its smallest increase this year—0.6 percent.

The index for entertainment rose 1.0 percent in September, largely due to a 4.3 percent increase in the index for magazines, periodicals, and books. The index for other goods and services registered a 1.9 percent increase. Higher prices for school tuition—up 10.2 percent—and school books and supplies accounted for most of the increase.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 1.0 percent

in September, following an increase of 0.7 percent in August and no change in July. A 1.7 percent rise in the food and beverage index was the second consecutive large increase. The housing component, which had been the major moderating influence on the CPI during the previous 2 months, rose 0.6 percent in September. Mortgage interest rates continued to decline in September but by substantially less than in July and August. Increases in other categories of consumer spending, particularly apparel and upkeep, transportation, and other goods and services, were larger than in August.

Prices for grocery store foods advanced 2.0 percent in September, following increases of 1.1 and 2.2 percent in July and August, respectively. The index for meats, poultry, fish, and eggs rose 3.8 percent and accounted for about three-fifths of the increase. Beef, pork, and poultry prices all advanced sharply for the third consecutive month. Prices for fresh vegetables and sugar and sweets also rose sharply in September. On the other hand, most other food categories registered smaller increases in September than in August, and the index for dairy products declined 0.3 percent.

The housing index rose 0.6 percent in September, largely because of higher shelter costs. The homeownership component advanced in September, following 2 months of declines. Home financing costs continued to decline as a 1.5 percent drop in mortgage interest rates more than offset a 1.4 percent increase in house prices. Property insurance costs accelerated in September, following moderate increases in July and August. The index for rent—up 0.9 percent—registered the largest monthly increase this quarter. Prices for household fuels, however, rose moderately for the second consecutive month. Fuel oil prices declined 0.1 percent and charges for gas and electricity rose 0.6 percent.

The transportation component increased 1.1 percent in September, the largest monthly increase since March. Used car prices, which had been running below year earlier levels during most of this year, rose 5.6 percent. New car prices rose less in September than in August,

1.0 percent as compared with 1.7 percent. The index for public transportation rose 2.9 percent, reflecting large increases in airline and intercity bus fares. Gasoline prices declined for the sixth consecutive month.

The index for apparel and upkeep rose 1.1 percent in September, following substantially smaller increases in the preceding 5 months. Prices of most apparel commodities increased substantially in September, reflecting the continued introduction of fall and winter wear.

The medical care index advanced 0.9 percent in September. Charges for hospital and other medical care

services rose 1.1 percent, following increases of 1.8 and 1.7 percent in July and August, respectively. Charges for professional services rose 1.0 percent. The index for medical care commodities increased 0.7 percent.

The index for entertainment rose 1.2 percent in September, largely due to a 4.5 percent increase in the index for magazines, periodicals, and books. The index for other goods and services registered a 1.6 percent increase. Higher prices for school tuition—up 10.3 percent—and school books and supplies accounted for most of the increase.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas priced on pricing schedule 2 (See table 13) will appear next month.

² Indexes on an October 1967 = 100 base unless otherwise indicated.

³ Indexes on a November 1977 = 100 base unless otherwise indicated.

⁴ The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

⁵ Index on a June 1978 = 100 base in Miami, Fla.; formerly on a November 1977 = 100 base.

⁶ Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978 = 100 base in Denver-Boulder, Col.

⁷ Indexes are on the bases listed:

Anchorage, Alaska.....January 1978 = 100.
Baltimore, Md.....March 1978 = 100.
Boston, Mass.....January 1978 = 100.
Cincinnati, Ohio-Ky.-Ind.....March 1978 = 100.

Denver-Boulder, Colo.....January 1978 = 100.

Miami, Fla.....November 1977 = 100.

Milwaukee, Wis.....November 1977 = 100.

Northeastern Pennsylvania.....November 1977 = 100.

Portland, Oreg.-Wash.....January 1978 = 100.

St. Louis, Mo.-Ill.....March 1978 = 100.

San Diego, Calif.....November 1977 = 100.

Seattle-Everett, Wash.....November 1977 = 100.

Washington, D.C.-Md.-Va.....November 1977 = 100.

⁸ Indexes on a June 1978 = 100 base; formerly on the bases listed in footnote 6.

⁹ The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

¹⁰ Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

¹¹ Index on a June 1978 = 100 base in San Diego, Calif.; formerly on a November 1977 = 100 base.

^{NA} Data not adequate for publication.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Price changes within areas are found in the Consumer Price Index; differences in living costs among areas are found in Family Budgets.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas priced on pricing schedule 2 (See table 18) will appear next month.

² Indexes on an October 1967=100 base unless otherwise indicated.

³ Indexes on a November 1977=100 base unless otherwise indicated.

⁴ The 1957-59=100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1969=100 base; index for Denver-Boulder, Colo. is on a January 1964=100 base.

⁵ Index on a June 1978=100 base in Miami, Fla.; formerly on a November 1977=100 base.

⁶ Indexes on a June 1978=100 base in Cincinnati, Ohio-Ky.-Ind. and Miami, Fla.; formerly on the bases listed in footnote 6. Index on a January 1978=100 base in Denver-Boulder, Col.

⁷ Indexes are on the bases listed:

Anchorage, Alaska.....January 1978=100.
Baltimore, Md.....March 1978=100.
Boston, Mass.....January 1978=100.
Cincinnati, Ohio-Ky.-Ind.....March 1978=100.

Denver-Boulder, Colo.....January 1978=100.

Miami, Fla.....November 1977=100.

Milwaukee, Wis.....November 1977=100.

Northeastern Pennsylvania.....November 1977=100.

Portland, Oreg.-Wash.....January 1978=100.

St. Louis, Mo.-Ill.....March 1978=100.

San Diego, Calif.....November 1977=100.

Seattle-Everett, Wash.....November 1977=100.

Washington, D.C.-Md.-Va.....November 1977=100.

⁸ Indexes on a June 1978=100 base; formerly on the bases listed in footnote 6.

⁹ The 1957-59=100 base is not available for San Diego, Calif.; index is on a February 1965=100 base.

¹⁰ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

¹¹ Index on a June 1978=100 base in San Diego, Calif.; formerly on a November 1977=100 base.

^{NA} Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. Effective with the January 1978 index, the Bureau of Labor Statistics began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from over 18,000 tenants, 18,000 housing units for property taxes, and about 24,000 establishments—grocery and department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for 28 local areas. Area indexes do not measure differences in the level of prices among cities; they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 22 percent, for example, is shown as 122.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$12.20.

For further details see the following: *The Consumer Price Index: Concepts and Content Over the Years*, Report 517, revised edition (Bureau of Labor Statistics, May 1978); *The Revision of the Consumer Price Index*, by W. John Layng, reprinted from the *Statistical Reporter*, February 1978, No. 78-5 (U.S. Dept. of Commerce), and *Revisions in the Medical Care Service component of the Consumer Price Index*, by Daniel H. Ginsburg, *Monthly Labor Review*, August 1978.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	236.4
Less previous Index	233.2
Equals index point change:	3.2
Percent Change	
Index point difference	3.2
Divided by the previous Index	233.2
Equals:	0.014
Results multiplied by one hundred	0.014x100
Equals percent change:	1.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used to compute the seasonally adjusted indexes are derived by the X-11 Variant of the Census Method II Seasonal Adjustment Program. Annual updates replace 5 years of seasonal data, e.g., data from 1976 through 1980 will be replaced at the end of 1980. The seasonal movement of all items and 35 other aggregations is derived by combining the seasonal movement of 45 selected components.

Explanation of Homeownership Measures

Official CPI-U includes five components. (1) The weights for property taxes, property insurance, and home maintenance and repairs represent expenditures of all homeowners in the base period. The weights for house prices and contracted mortgage interest cost represent only those homeowners who actually purchased a home in the base period. Included are the total price paid for the home, and the total amount of interest expected to be paid over half the stated life of the mortgage. (2) Current monthly prices are used for each of these components.

Experimental Measure X-1: (1) The weight for this rental equivalence measure is the estimate of the rental value of all owner-occupied homes in the base period compiled from a specific question asked on the 1972-73 Consumer Expenditure Survey. This covers the entire stock of owned homes. (2) Prices used are the current rents collected for the residential rent component of the CPI. The CPI rent component is designed to represent changes in residential rents for all types of housing

units, not just changes in rents for units that are typically owner occupied. The CPI rent component is, therefore, not appropriate for this measure.

Experimental Measure X-2: (1) The weight for this user cost method includes expenditures for mortgage interest, property taxes, property insurance, maintenance and repairs, the estimated base-period cost of homeowners' equity in their houses, and the offset to shelter costs resulting from the estimated appreciation of house values in the base period. This measure covers the entire stock of owned houses. To derive the weights for mortgage interest costs and equity costs, the total value of the housing stock in the base period was apportioned into its debt and equity components. The debt component equals the amount owed and the equity component is the amount owned, i.e., payments on principal plus appreciation from the time of purchase to the base period. Each component was subsequently multiplied by the average mortgage interest rate in the base period to determine its cost. (2) Prices used are current ones except for the appreciation term which uses a 5-year moving average of the changes in appreciation rates.

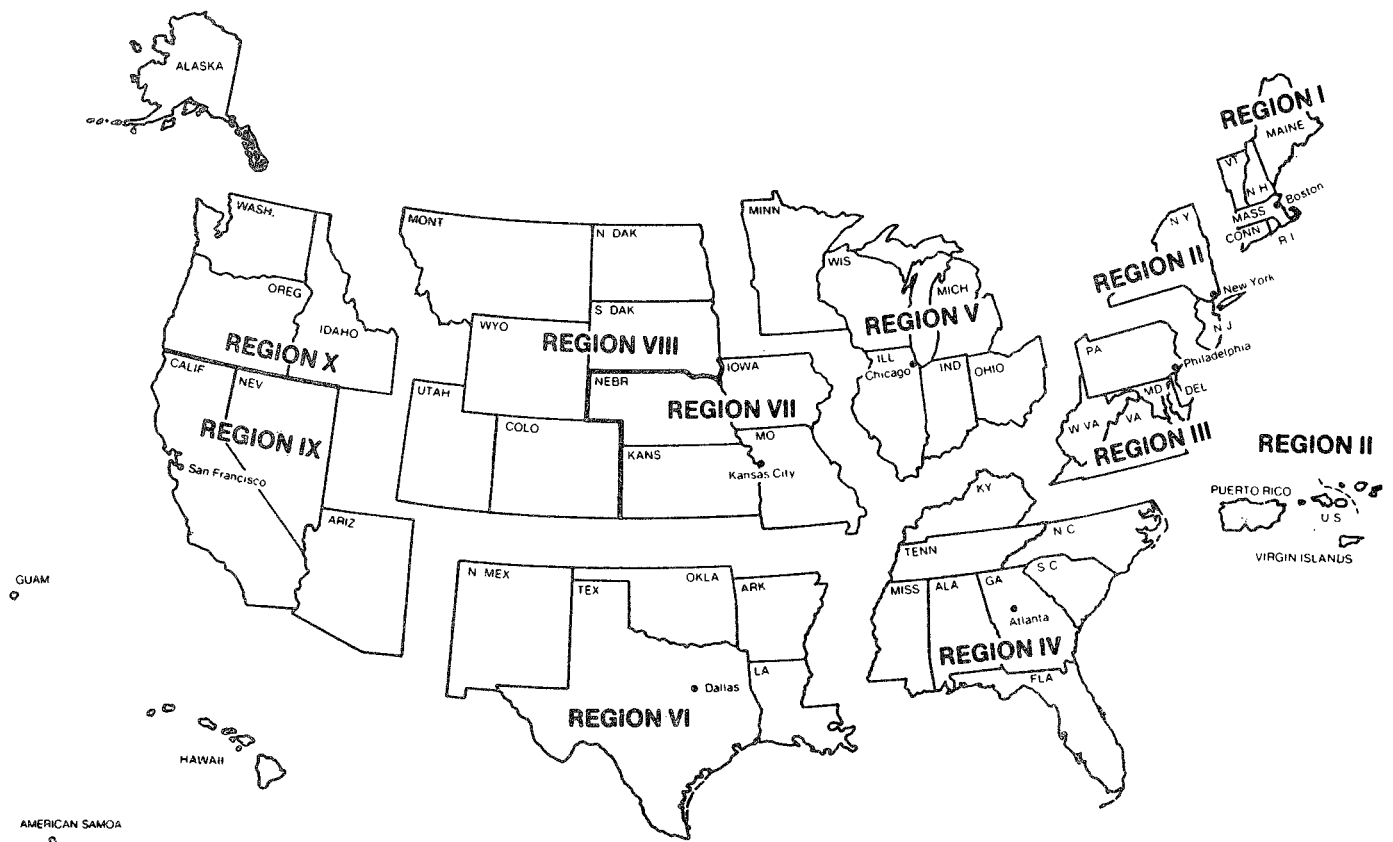

Experimental Measure X-3: (1) The weights are the same as in Experimental Measure X-2, except that mortgage interest costs are calculated as the total interest amount *paid out* by homeowners in the base period. As in X-1 and in X-2, this measure covers the entire homeowners population. (2) The prices for all components except mortgage interest costs and appreciation are current monthly prices. As in X-2, appreciation is represented by a 5-year moving average of the changes in house prices. However, X-3, uses past and current mortgage interest costs in a 15-year weighted moving average, which reflects the base period age distribution of mortgage loans.

Experimental Measure X-4: The weights for this outlays approach include expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest term is calculated in the same manner as in X-2. However, no appreciation or equity terms are included. Not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) The prices used for each of these items are current ones.

Experimental Measure X-5: (1) The weights for this outlays approach include, as in X-4, expenditures actually made in the base period for property taxes, property insurance, maintenance, and repairs. The weight for the mortgage interest cost term is the same as for the X-3. No appreciation or equity elements are used. As in X-4, not all homeowners are represented in this measure because those who made no mortgage debt payment in the base period are excluded. (2) Current prices are used in X-5 except for mortgage interest which uses the 15-year moving average also used in the X-3.
