

CPI Detailed Report September 1985

U.S. Department of Labor
Bureau of Labor Statistics

U.S. DEPARTMENT OF LABOR
William E. Brock, *Secretary*

BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, *Associate Commissioner*

The CPI Detailed Report is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

This publication may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington D.C. 20402. Subscription price per year \$25 domestic, and \$31.25 foreign. Single copy domestic, \$4; foreign, \$5. Send correspondence on circulation and subscription matters (including address changes) to the Superintendent of Documents.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$125 in contiguous U.S. and Hawaii; \$135 in Alaska and Canada.

Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics. Second-class postage paid at Washington, D.C., and at additional mailing offices.

Price Movements September 1985

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.3 percent before seasonal adjustment in September to a level of 324.5 (1967 = 100). For the 12-month period ended in September, the CPI-U increased 3.2 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also rose 0.3 percent in September, prior to seasonal adjustment. The September 1985 CPI-W level of 320.5 was 2.7 percent higher than the index in September 1984.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.2 percent in September, the same as in each of the preceding 4 months. Shelter costs, which rose at an average monthly rate of 0.7 percent during the May-August period, rose only 0.2 percent in September. On the other hand, grocery store food prices increased in September after declining in the preceding 4-month period. Energy and used car prices, however, continued to decline in September. Prices for items other than grocery store foods, shelter, energy, and used cars rose at virtually the same rate in September as throughout the preceding 4 months.

During the first 9 months of 1985, the CPI-U rose at a seasonally adjusted annual rate of 3.2 percent—increasing at a 4.1 percent rate in the first quarter, a 3.3 percent rate in the second, and a 2.3 percent rate in the third.

The slowdown in consumer prices this year began in

May and during the 5-month period ended in September, the CPI increased at an annual rate of 2.4 percent. This compares with a 4.0 percent annual rate over the preceding 43-month period of relatively constant overall price change beginning in October 1981. This deceleration was largely a result of declines in prices for used cars, energy, and grocery store foods. Partially offsetting the effect of these declines was an acceleration in the shelter component. The rates for the CPI for these groups in the two periods are shown below:

	Seasonally adjusted annual rate	
	From September 1981 to April 1985	From April 1985 to September 1985
All items.....	4.0	2.4
Food at home.....	2.4	-1.0
Shelter.....	4.0	7.0
Energy.....	1.1	-1.5
Used cars.....	11.0	-12.8
All other items.....	4.3	3.7

In September, the transportation component was down 0.2 percent, the fifth consecutive monthly decline. Used car and gasoline prices continued to be largely responsible for the transportation slowdown. Used car prices, which declined 0.2 percent in September, have decreased 5.5 percent since April. Gasoline prices—down 0.8 percent in September—were also lower than their level in April and were 12.8 percent below their peak level of March 1981. Automobile

Other goods and services3	.4	.3	.4	.9	.4	.2	6.5	5.7

finance charges dropped 4.6 percent in September, the tenth consecutive monthly decline. On the other hand, new car prices rose 0.3 percent after seasonal adjustment. The index for public transportation advanced 1.1 percent, largely due to a 1.7-percent increase in airline fares.

The food and beverage index rose 0.3 percent in September. Grocery store food prices also increased 0.3 percent. This advance follows generally declining prices in the preceding 6 months. Turnarounds in the indexes for meats, poultry, fish, and eggs and for fruits and vegetables were largely responsible for the September increase. Within the meats, poultry, fish, and eggs category, the index for beef and veal products rose 0.5 percent, following seasonal adjustment, its first increase in 1985. Increases in prices for poultry—up 0.9 percent—and eggs—up 3.5 percent—also contributed to the advance. Pork prices, however, continued to decline, dropping 1.9 percent. The index for fresh vegetables rose 0.7 percent in September, following seasonal adjustment, primarily as the result of higher lettuce prices. The indexes for cereal and bakery products, dairy products, and other foods at home each increased 0.2 percent in September. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.5 and 0.3 percent, respectively.

The housing component rose 0.2 percent in September, following a 0.5-percent increase in August. A much smaller increase in shelter costs—up 0.2 percent in September—and a turnaround in the index for household furnishings and operations more than offset an increase in the index for fuel and other utilities. Within the shelter component, renters' and homeowners' costs each rose 0.3 percent, while maintenance and repair costs declined 0.5 percent. A turnaround in prices for fuel oil was primarily responsible for the increase in the fuel and other utilities component. Despite a 1.6-percent increase in September, fuel oil prices remained below their level a year ago and were

15.8 percent lower than their peak level of April 1981. The index for electricity rose 0.6 percent in September and was 1.5 percent above its level a year ago. Charges for natural gas continued to decline—down 0.3 percent in September—and were 1.9 percent lower than in September 1984.

The medical care component rose 0.5 percent in September, the same as in the preceding 2 months. The indexes for both medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—and medical care services also increased 0.5 percent. Within medical care services, physicians' fees and hospital rooms were up 0.5 and 0.3 percent, respectively.

The index for apparel and upkeep rose 0.5 percent in September, following an increase of 0.3 percent in August.

The index for entertainment rose 0.5 percent in September, after declining 0.1 percent in August. Increases in prices for entertainment commodities—up 0.9 percent—more than offset the slight decline in entertainment services.

The other goods and services component increased 0.2 percent in September. This compares with an average monthly increase of about 0.6 percent for the first 8 months of 1985. A decline of 0.3 percent in the index for tuition and school fees following seasonal adjustment, was responsible for the slowdown. (These costs rose 7.1 percent, prior to seasonal adjustment.)

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.2 percent in September, the same as in the CPI-U. (The rental equivalence approach to homeownership has been used in the CPI-W since January 1985. The methodology and samples of areas, items, outlets, and prices are identical in both the CPI-W and the CPI-U, and differences in monthly changes result only from different expenditure patterns and seasonal adjustment factors.)

Local area CPI changes

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently. See the last page of the Technical Notes for additional detail.

Homeownership changes

As announced in October 1981, the Bureau of Labor Statistics has changed the treatment of homeownership costs in the CPI for Urban Wage Earners and Clerical Workers (CPI-W) effective with release of data for January 1985. See the last page of the Technical Notes for additional detail.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

West/D	1.6	.3	2.2	.9	-.1	3.0

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:
A-1 - More than 4,000,000.
A-2 - 1,250,000 to 4,000,000.
B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Areas on pricing schedule 2 (See footnote 1 table 18) will appear next month.

² Indexes on an October 1967 = 100 base unless otherwise indicated.

³ Indexes on a November 1977 = 100 base unless otherwise indicated.

⁴ The 1957-59 = 100 base is not available for Anchorage, Alaska and Denver-Boulder, Colo.; index for Anchorage, Alaska is on a May-October 1960 = 100 base; index for Denver-Boulder, Colo. is on a January 1964 = 100 base.

⁵ Indexes on a November 1984 = 100 base.

⁶ Index on a June 1978 = 100 base in Miami, Fla.

⁷ Indexes on a June 1978 = 100 base in Cincinnati, Ohio-Ky.-Ind.; Denver-Boulder, Col.; and Miami, Fla.

⁸ Indexes on a June 1978 = 100 base.

⁹ Indexes on a June 1978 = 100 base in Anchorage, Alaska; Denver-Boulder, Col.; and Miami, Fla.

¹⁰ Indexes on a June 1978 = 100 base in Anchorage, Alaska; Denver-Boulder, Col.; and Miami, Fla. Indexes on a January 1976 = 100 base in Baltimore, Md.; Boston, Mass.; Cincinnati, Ohio-Ky.-Ind.; and Milwaukee, Wis.

¹¹ Indexes on an August 1981 = 100 base.

¹² Indexes are on the bases listed:

Anchorage, Alaska.....January 1978 = 100.

Baltimore, Md.....March 1978 = 100.

Boston, Mass.....January 1978 = 100.

Cincinnati, Ohio-Ky.-Ind.....March 1978 = 100.

Denver-Boulder, Colo.....January 1978 = 100.

Miami, Fla.....November 1977 = 100.

Milwaukee, Wis.....November 1977 = 100.

Northeastern Pennsylvania.....November 1977 = 100.

Portland, Oreg.-Wash.....January 1978 = 100.

St. Louis, Mo.-Ill.....March 1978 = 100.

San Diego, Calif.....November 1977 = 100.

Seattle-Everett, Wash.....November 1977 = 100.

Washington, D.C.-Md.-Va.....November 1977 = 100.

¹³ The 1957-59 = 100 base is not available for San Diego, Calif.; index is on a February 1965 = 100 base.

¹⁴ Index is on an April 1967 = 100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

¹⁵ Index on a June 1978 = 100 base in San Diego, Calif.

¹⁶ Indexes on a June 1978 = 100 base in Northeast, Pa.; and Portland, Oreg.-Wash.

¹⁷ Indexes on a June 1978 = 100 base in Northeast, Pa.; and Portland, Oreg.-Wash. Indexes on a January 1976 = 100 base in St. Louis, Mo.-Ill.; San Diego, Calif.; Seattle-Everett, Wash.; and Washington, D.C.-Md.-Va.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 4,000 food stores, 24,000 rental units, and 28,000 establishments—department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices

among cities, they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 203 percent, for example, is shown as 303.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$30.30.

For further details see *BLS Handbook of Methods*, Vol. I, "The Consumer Price Index," Bulletin 2134-2, April 1984.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	315.5
Less previous index	303.5
Equals index point change	12.0
Percent Change	
Index point difference	12.0
Divided by the previous index	303.5
Equals	0.040
Results multiplied by one hundred	0.040 x 100
Equals percent change	4.0

Homeownership Changes

The Consumer Price Index (CPI) has been changed to incorporate a rental equivalence measure of homeowners' costs in accordance with plans announced by the Bureau of Labor Statistics (BLS) on October 27, 1981. For the CPI for All Urban Consumers (CPI-U), this change was effective with release of the index for January 1983 and for the CPI for Urban Wage Earners and Clerical Workers (CPI-W), it was effective with the release of the January 1985 index. The rental equivalence approach calculates shelter costs of homeowners based on the implicit rent owners would have to pay to rent homes that they own. The old method calculated homeownership as home purchase, mortgage interest costs, property taxes, property insurance, and maintenance and repairs. The new homeownership component was introduced into both the CPI-U and the CPI-W in such a manner that in each case the indexes using the old and new methodologies were equal in the so-called "link month"—December 1982 for the CPI-U and December 1984 for the CPI-W. For more information, see the *CPI Detailed Report* for January 1983, pp. 7-13.

Changes in Frequency of Publication for Local Area CPI's

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently.

The changes in publication frequency arise from the requirement to allocate the sample to reflect population shifts in the 1980 census so as to provide the most accurate national CPI possible with the funds available. As a result, some local areas will no longer have samples sufficient to permit more frequent publication.

In addition to the national index for all cities, the Bureau now publishes indexes for 28 urban areas. In 1987, it will continue to publish indexes for all but one of these areas—Northeast Pennsylvania (Scranton—Wilkes-Barre).

Of the remaining 27 published urban areas, 13 will have a reduction in frequency beginning in 1987. The index for Detroit, currently published monthly, will be published only in the even numbered months. Twelve areas now published bimonthly will be compiled on a semiannual average basis. These areas are: Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Kansas City, MO-Kansas City, KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Atlanta, GA; Anchorage, AK; Denver-Boulder, CO; Honolulu, HI; Portland-Vancouver, OR-WA; San Diego, CA; and

Seattle-Tacoma, WA. These semi-annual average indexes, which refer to the arithmetic averages of the 6-month periods from January through June and July through December, will be published with release of the CPI for July and January, respectively, i.e., in the months of August and February. These series will be compiled and published on their present reference bases, 1967 = 100 for all areas other than Anchorage, which is on an October 1967 reference base. Also, the Cleveland-Akron-Lorain, OH, indexes will be published in odd-numbered rather than even-numbered months.

Further details are available from BLS.

Seasonally Adjusted and Unadjusted Data

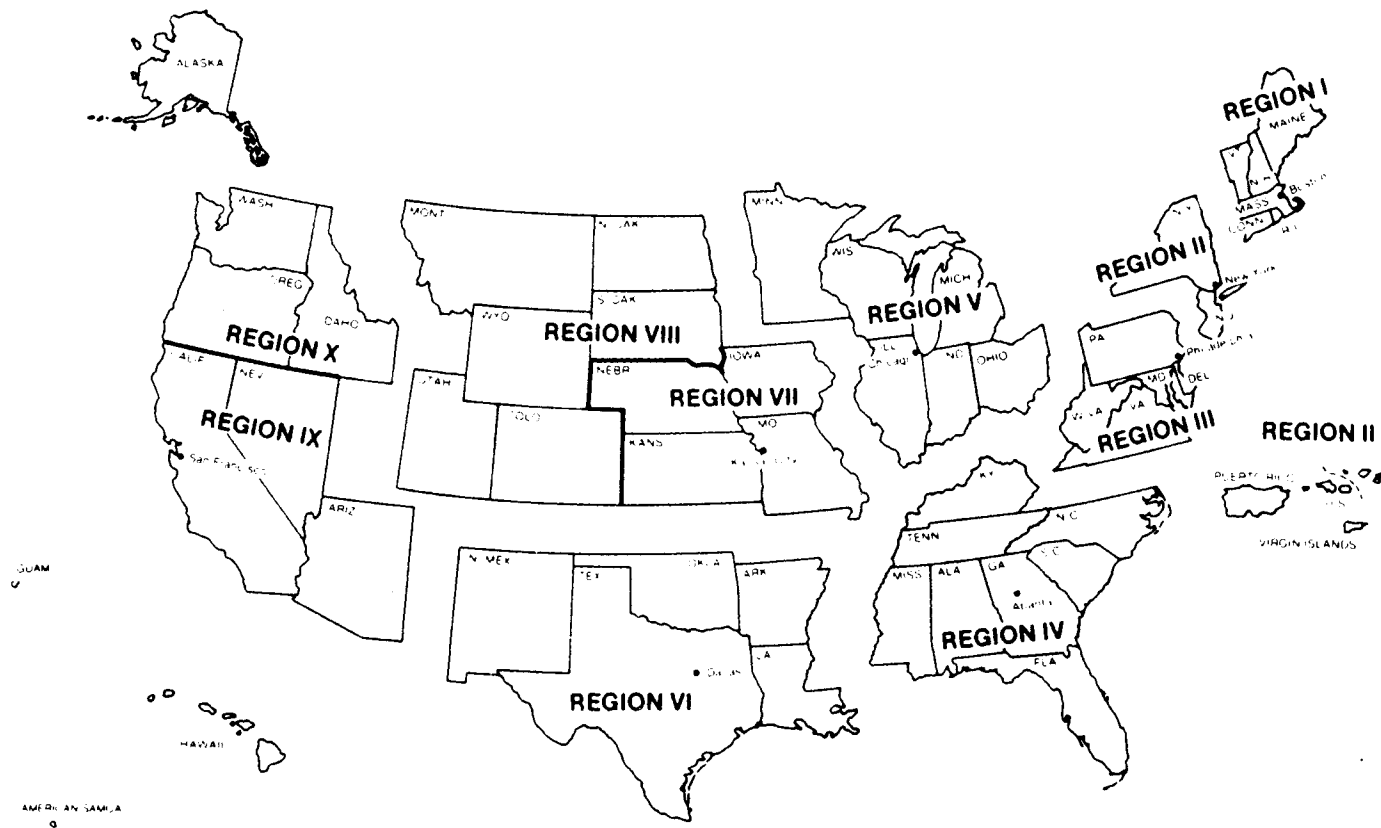

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11 Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1980 through 1984 were replaced at the end of 1984. The seasonal movement of all items and 44 other aggregations is derived by combining the seasonal movement of 51 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 51 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period. If any of the 51 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted data will be used for the last 5 years, but not seasonally adjusted indexes will be used before that period.
