Price Movements December 1985

The Consumer Price Index for All Urban Consumers (CPI-U) increased 0.2 percent before seasonal adjustment in December to a level of 327.4 (1967 = 100). For the 12-month period ended in December, the CPI-U increased 3.8 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) rose 0.2 percent in December, prior to seasonal adjustment. The December 1985 CPI-W level of 323.4 (1967 = 100) was 3.6 percent higher than the index in December 1984.

CPI for All Urban Consumers (CPI-U)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for All Urban Consumers rose 0.4 percent in December. This compares with a 0.6-percent increase in November and a 0.3-percent average monthly rate of advance for all of 1985. For the second consecutive month, substantial increases in food and energy prices were responsible for the larger-than-average monthly increase in the CPI. These components accounted for about one half of the overall December advance. Excluding the food and energy components, the CPI-U rose 0.3 percent in December, slightly less than in November.

For the 12-month period ended in December, the CPI-U advanced 3.8 percent, about the same as in each of the 3 preceding calendar years. Although the overall in-

creases in the past 4 years have been nearly the same, the composition of each has been somewhat different. The energy, shelter, and food components showed sharp deceleration beginning in late 1981.

Throughout the 1982-85 period, however, the moderation became more broadly based with price increases for all other items slowing steadily. This continued slowing has occurred primarily in the goods sector, as price increases in the service sector have remained around the 5 to 6 percent level since 1982. The rates for the groups during these periods are shown below.

meats, poultry, fish, and eggs and fresh fruits and vegetables. The index for fresh fruits and vegetables rose 7.0 percent in December and was 7.8 percent higher than in December 1984. Very large lettuce and tomato price increases were responsible for the December advance. Beef prices, which had declined in each of the first 8 months of 1985, have risen 9 percent in the last 4 months and are now slightly higher (0.6 percent) than at the end of 1984. Pork prices, which increased 2.8 percent in November, rose 0.8 percent in December and are now at virtually the same level as a year ago. Poultry prices advanced sharply for the second consecutive month—up 1.6 percent in December—and are 3.0 percent higher than 12 months ago. Among other major grocery store food groups, cereal and bakery products rose 0.6 percent in December and 3.6 percent over the year. The indexes for processed fruits and vegetables, dairy products, and other foods at home all declined in December. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—each increased 0.3 percent, the same as in November. The 12-month advances in these components—3.8 and 5.5 percent, respectively—compare with a 2.1-percent increase in grocery store food prices.

The housing component rose 0.3 percent in December, after advancing 0.5 percent in November, reflecting smaller increases in the cost of shelter and household furnishings and operations. Within the shelter component, renters' costs rose 0.1 percent, homeowners' costs rose 0.4 percent, and maintenance and repair costs—which pertain to both renters and homeowners—increased 0.3 percent. The index for household furnishings and operations rose 0.1 percent in December, following a 0.3-percent increase in November. The index for fuels and other utilities advanced 0.4 percent in December, the same as in November. Fuel oil prices—up 2.0 percent in December—have increased 11.0 percent in the last 4 months of 1985 and are now 5.5 percent above their level at the end of 1984. Despite these advances, fuel oil

prices in December were 8.0 percent below their peak level of April 1981. Charges for electricity rose 0.6 percent in December, after registering declines in each of the preceding 2 months, and are 2.7 percent higher than in December 1984. The index for natural gas registered its fifth consecutive monthly decline and has decreased 4.6 percent during 1985. Among other utilities, the cost of telephone services declined slightly in December, due to a 1.3-percent drop in charges for intrastate calls. During the past 12 months, the cost of telephone services has risen 4.7 percent with local charges advancing and interstate call charges declining.

The transportation component rose 0.5 percent in December, following an increase of 0.7 percent in November, largely as a result of a smaller but substantial increase in gasoline prices and a turnaround in the cost of automobile finance charges. Following the 1.0-percent increase in December, gasoline prices were 3.0 percent above their level at the end of 1984, but 11.4 percent below their peak level of March 1981. Automobile finance charges, which increased 5.4 percent in the 2-month period ended in November, declined 0.8 percent in December and are now 8.3 percent lower than in December 1984. New and used car prices, which were unchanged in November, rose 0.4 and 0.1 percent, respectively. During 1985, new car prices increased 3.5 percent, while used car prices declined 1.9 percent. Among other automobile expenses, insurance costs rose 1.1 percent in December and 12.0 percent during all of 1985. The index for public transportation was unchanged in December as a decline in airline fares offset increases in intercity bus and train fares and taxi fares. For the 12 months ended in December, public transportation costs rose 5.1 percent.

The medical care component rose 0.6 percent in December, following increases of 0.5 percent in each of the preceding 5 months. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—rose 0.3 percent. The index for medical care services rose 0.6 percent, with the

cost of physicians' services and hospital rooms each up 0.7 percent. During 1985, the cost of physician's services and hospital rooms advanced 6.9 and 4.8 percent, respectively. The over-the-year increase in the cost of hospital rooms was the smallest December-to-December rise since a 4.4-percent rise in 1964.

The index for apparel and upkeep declined 0.2-percent in December, following a 0.2-percent increase in November. Widespread sale prices, with larger than usual seasonal price reductions in women's and girls' clothing, were only partially offset by a 0.4-percent rise in charges for apparel services. During the past 12 months, prices for apparel commodities rose 2.4 percent, and charges for apparel services advanced 4.9 percent.

The index for entertainment declined 0.1 percent in December, following a 0.3-percent rise in November. Declines in all major entertainment commodity groups—reading materials, sporting goods and equipment, and toys, hobbies, and other entertainment commodities—more than offset a small increase in entertainment services.

The other goods and services component advanced 0.6 percent in December, after increasing 0.4 percent in November, largely as a result of a 0.9-percent increase in cigarette prices.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)—seasonally adjusted changes

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.4 percent in December, the same as in the CPI-U. (The rental equivalence approach to homeownership has been used in the CPI-W since January 1985. The methodology and samples of areas, items, outlets, and prices are identical in both the CPI-W and the CPI-U, and differences in monthly changes result only from different expenditure patterns and seasonal adjustment factors.)

Homeownership changes

As announced in October 1981, the Bureau of Labor Statistics has changed the treatment of homeownership costs in the CPI for Urban Wage Earners and Clerical Workers (CPI-W) effective with release of data for January 1985. See the last page of the Technical Notes for additional detail.

Local area CPI changes

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently. See the last page of the Technical Notes for additional detail.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

NOTE: Local area CPI indexes are by-products of the national CPI program. Because each local index is a small subset of the national index, it has a smaller sample size and is, therefore, subject to substantially more sampling and other measurement error than the national index. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in escalator clauses.

¹ Index is on an April 1967=100 base in Northeastern Pennsylvania and Portland, Oreg.-Wash.

² Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

³ Regions are defined as the four Census regions. The population size classes are aggregations of areas which have urban population as defined:

B - 385,000 to 1,250,000.
C - 75,000 to 385,000.
D - Less than 75,000.
Population size class A is the aggregation of population size classes A-1 and A-2.

¹ Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

² Honolulu not included for utility (piped) gas.

³ Prices are for synthetic natural gas and propane only.

⁴ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

A-1 - More than 4,000,000.

A-2 - 1,250,000 to 4,000,000.

B - 385,000 to 1,250,000.

C - 75,000 to 385,000.

D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

³ Area is generally the Standard Metropolitan Statistical Area (SMSA), exclusive of farms. L.A.-Long Beach, Anaheim, Calif. is a combination of two SMSA's, and N.Y., N.Y.-Northeastern N.J. and Chicago, Ill.-Northwestern Ind. are the more extensive Standard Consolidated Areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Denver-Boulder, Colo. which does not include Douglas County. Definitions do not include revisions made since 1973.

⁴ Regions are defined as the four Census regions.

The population size classes are aggregations of areas which have urban population as defined below:

- A-1 - More than 4,000,000.
- A-2 - 1,250,000 to 4,000,000.
- B - 385,000 to 1,250,000.
- C - 75,000 to 385,000.
- D - Less than 75,000.

Population size class A is the aggregation of population size classes A-1 and A-2.

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total noninstitutional civilian population; and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by the CPI-U. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 4,000 food stores, 24,000 rental units, and 28,000 establishments—department stores, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Mail questionnaires are used to obtain public utility rates, some fuel prices, and certain other items.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 28 local areas. Area indexes do not measure differences in the level of prices

among cities, they only measure the average change in prices for each area since the base period.

The index measures price changes from a designated reference date—1967—which equals 100.0. An increase of 203 percent, for example, is shown as 303.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$10 in 1967 to \$30.30.

For further details see *BLS Handbook of Methods*, Vol. II, "The Consumer Price Index," Bulletin 2134-2, April 1984.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

| Index Point Change | |
|-----------------------------------|-------------|
| CPI | 315.5 |
| Less previous index | 303.5 |
| Equals index point change | 12.0 |
| Percent Change | |
| Index point difference | 12.0 |
| Divided by the previous index | 303.5 |
| Equals | 0.040 |
| Results multiplied by one hundred | 0.040 x 100 |
| Equals percent change | 4.0 |

Homeownership Changes

The Consumer Price Index (CPI) has been changed to incorporate a rental equivalence measure of homeowners' costs in accordance with plans announced by the Bureau of Labor Statistics (BLS) on October 27, 1981. For the CPI for All Urban Consumers (CPI-U), this change was effective with release of the index for January 1983 and for the CPI for Urban Wage Earners and Clerical Workers (CPI-W), it was effective with the release of the January 1985 index. The rental equivalence approach calculates shelter costs of homeowners based on the implicit rent owners would have to pay to rent homes that they own. The old method calculated homeownership as home purchase, mortgage interest costs, property taxes, property insurance, and maintenance and repairs. The new homeownership component was introduced into both the CPI-U and the CPI-W in such a manner that in each case the indexes using the old and new methodologies were equal in the so-called "link month"—December 1982 for the CPI-U and December 1984 for the CPI-W. For more information, see the *CPI Detailed Report* for January 1983, pp. 7-13.

Changes in Frequency of Publication for Local Area CPI's

The Bureau of Labor Statistics will improve the sample of urban areas in which it gathers prices for monthly preparation of the Consumer Price Index beginning in 1987. At the same time, the Bureau will publish a number of local area CPI's less frequently.

The changes in publication frequency arise from the requirement to allocate the sample to reflect population shifts in the 1980 census so as to provide the most accurate national CPI possible with the funds available. As a result, some local areas will no longer have samples sufficient to permit more frequent publication.

In addition to the national index for all cities, the Bureau now publishes indexes for 28 urban areas. In 1987, it will continue to publish indexes for all but one of these areas—Northeast Pennsylvania (Scranton—Wilkes-Barre).

Of the remaining 27 published urban areas, 13 will have a reduction in frequency beginning in 1987. The index for Detroit, currently published monthly, will be published only in the even numbered months. Twelve areas now published bimonthly will be compiled on a semiannual average basis. These areas are: Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Kansas City, MO-Kansas City, KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Atlanta, GA; Anchorage, AK; Denver-Boulder, CO; Honolulu, HI; Portland-Vancouver, OR-WA; San Diego, CA; and

Seattle-Tacoma, WA. These semi-annual average indexes, which refer to the arithmetic averages of the 6-month periods from January through June and July through December, will be published with release of the CPI for July and January, respectively, i.e., in the months of August and February. These series will be compiled and published on their present reference bases, 1967 = 100 for all areas other than Anchorage, which is on an October 1967 reference base. Also, the Cleveland-Akron-Lorain, OH, indexes will be published in odd-numbered rather than even-numbered months.

Further details are available from BLS.

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will appear. NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices, except for electricity, are collected monthly by BLS representatives in the urban areas priced for the CPI. Electricity prices are collected monthly on mail questionnaires by the Department of Energy for BLS. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P-2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas and for 500 kilowatt hours of electricity (table P-1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since

heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, to provide data for place-to-place price comparisons, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a per gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

- 1 therm = 100,000 BTU'S (U.S. Department of Energy).
- 1 kwh = 3,412 BTU'S (Edison Electric Institute)
- 1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted, however, that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where

the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from BLS Regional Offices or from the Washington Office upon request.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

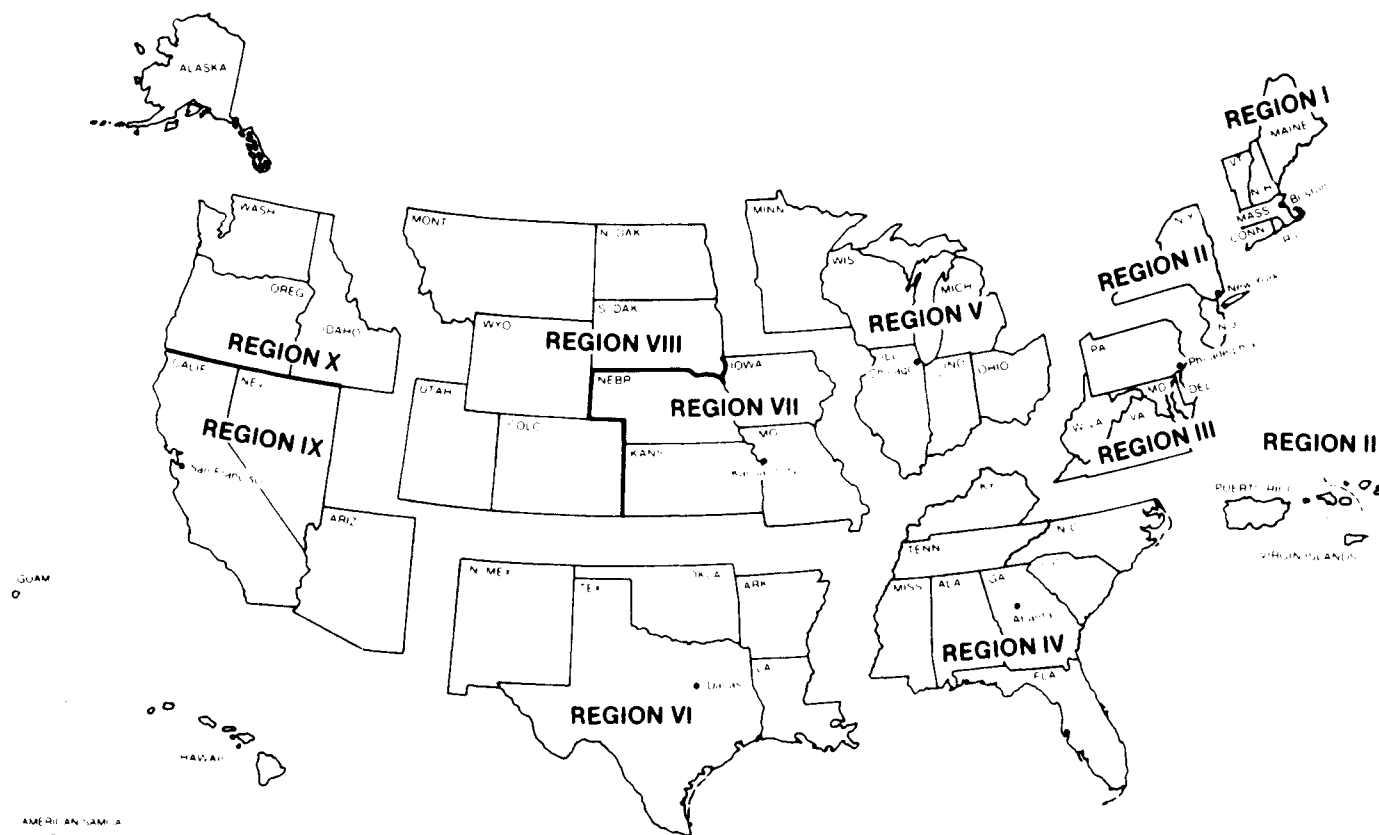

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11 Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1980 through 1984 were replaced at the end of 1984. The seasonal movement of all items and 44 other aggregations is derived by combining the seasonal movement of 51 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 51 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period. If any of the 51 components change their status from not seasonally adjusted to seasonally adjusted, seasonally adjusted data will be used for the last 5 years, but not seasonally adjusted indexes will be used before that period.
