OFFICE OF PRICES AND LIVING CONDITIONS

Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year \$21 domestic, and \$26.25 foreign. Single copy domestic, \$7; foreign, \$8.75. Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents; telephone (202) 275-3054.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Data in this periodical are based on prices collected during July, before the outbreak of the recent disturbances in the Middle East.

Price Movements

July 1990

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.4 percent before seasonal adjustment in July to a level of 130.4 (1982-84 = 100). For the 12-month period ended in July, the CPI-U increased 4.8 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.3 percent in July prior to seasonal adjustment. The July 1990 CPI-W level of 128.7 was 4.5 percent higher than the index in July 1989.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.4 percent in July. This compares with an average monthly increase of 0.5 percent in the first 6 months of 1990. Shelter costs advanced 0.9 percent in July, the same as in June, and accounted for over half of the increase in the overall CPI. Food prices—up 0.4 percent—increased for the second consecutive month, but by less than in June. Energy costs, which turned up in June after declining in each of the preceding 4 months, fell 0.7 percent in July, reflecting price declines in both household and motor fuels. Excluding food, shelter, and energy, the CPI-U rose 0.5 percent in July, following increases of 0.2 percent in both May and June.

During the first 7 months of 1990 the CPI-U rose at a 5.8-percent seasonally adjusted annual rate. This compares with a 5.5-percent rate in the first 7 months of 1989 and a 4.6-percent change for the 12 months ended in December.

The food and beverage index increased 0.4 percent in July. Grocery store food prices, which advanced 1.0 percent in June, rose 0.4 percent in July. While prices for most items moderated, the fruit and vegetable index rose 1.6 percent reflecting higher prices for bananas and lettuce—up 32.3 and 17.1 percent, respectively—and accounted for almost three-fourths of the advance in the grocery store food index. The index for meats, poultry, fish, and eggs, which increased 1.5 percent in June, decreased 0.4 percent in July. Declines in the indexes for pork, eggs, fish, and seafood more than offset increases in the prices for poultry and beef. The 0.2-percent drop in pork prices, after seasonal adjustment, was the first decline since last September, a period in which they rose 19.1 percent. Egg prices, which had risen sharply in each of the 2 preceding years, dropped 8.2 percent and as of July were 11.2 percent lower than at the end of 1989. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.4 and 0.5 percent, respectively.

The housing component rose 0.5 percent in July, following a 0.6-percent increase in June. Shelter costs advanced 0.9 percent in July, the same as in the preceding month. Within shelter, renters' costs rose 1.5 percent, homeowner's costs, 0.6 percent, and maintenance and repair costs, 0.2 percent. The large increase in renters' costs resulted from a 5.1-percent rise in lodging while out of

town. Residential rents rose 0.4 percent. The index for fuels and other utilities declined 0.8 percent in July. Fuel oil prices dropped for the sixth consecutive month—down 1.9 percent in July. Charges for gas and electricity declined 1.3 and 0.7 percent, respectively. Among other utilities and public services, the index for telephone services decreased 2.1 percent, reflecting declines in local service charges and interstate toll calls. These declines were partially offset by increases in the indexes for water and sewerage maintenance and cable television—up 1.0 and 1.4 percent, respectively. The index for cable television has risen 12.1 percent in the last 8 months. The index for household furnishings and operations turned back up in July, advancing 0.4 percent, largely as a result of an increase in prices for furniture and bedding.

Transportation costs, which rose 0.4 percent in June, increased 0.3 percent in July. Gasoline prices, which increased 2.5 percent in June, fell 0.3 percent. New car prices fell for the sixth consecutive month—down 0.3 percent in July. Automobile finance charges were up 0.1 percent. Used car prices rose 0.7 percent, their largest increase since January 1989. The index for automobile registration and license and inspection fees rose 10.5 percent in July. Public transportation costs increased 0.1 percent, as increases in other intercity and intracity public transportation costs offset a 0.1-percent decline in airline fares. The July decline in airline fares followed an increase of 11.4 percent in the preceding 9-month period.

The index for apparel and upkeep—down 0.2 percent in

July—declined for the third consecutive month. Price increases for some fall and winter merchandise introduced this month helped to partially offset further price discounting on spring and summer clothing.

The medical care component increased 0.9 percent in July to a level 9.2 percent above a year ago. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—advanced 0.4 percent. The index for medical services advanced 0.9 percent, with the cost of professional services and hospital and related services up 0.7 and 0.8 percent, respectively.

Entertainment costs advanced 0.6 percent in July, following increases of 0.2 percent in each of the preceding 2 months. Increases in the indexes for admissions (to movies, theaters, concerts, operas, other musical events, and sporting events) and pet supplies and expenses accounted for over half of the July increase in the entertainment index.

The index for other goods and services, which rose 0.9 percent in June, increased 1.1 percent in July. For the second consecutive month, about 60 percent of the increase was due to a sharp rise in prices for tobacco and smoking products; the 2.7-percent advance in July reflected increases in State excise taxes coupled with the residual effects of the sharp increase in wholesale prices introduced in May.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.3 percent in July.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986=100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions are defined as the four Census regions.

³ Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977 = 100 base except for the U.S. which is on a 1967 = 100 base.

³ Indexes on a December 1982 = 100 base.

⁴ Indexes on a December 1986 = 100 base.

NA Data not adequate for publication.

- Data not available.

¹ Regions are defined as the four Census regions.

² Indexes are on a December 1977 = 100 base except for the U.S. which is on a 1967 = 100 base.

³ Indexes on a December 1984 = 100 base.

⁴ Indexes on a December 1986 = 100 base.

NA Data not adequate for publication.

— Data not available.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details, see *BLS Handbook of Methods*, BLS Bulletin 2285, April 1988, and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are effected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

Price are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).

1 kwh = 3,412 BTU'S (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Reference Base Change

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967=100, or any other base through December 1981, have been rebased to 1982-84=100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in

February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics. For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. (*Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.² The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, pp. 162-78. These papers are available from the BLS on request.

² For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285).

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1985 through 1989 were replaced at the end of 1989. The seasonal movement of all items and 45 other aggregations is derived by combining the seasonal movement of 55 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 55 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years,

but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors. For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally

adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars and for new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw on (202)504-2051.
