BUREAU OF LABOR STATISTICS
Janet L. Norwood, *Commissioner*

OFFICE OF PRICES AND LIVING CONDITIONS
Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report* is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Subscription price per year $21 domestic, and $26.25 foreign. Single copy domestic, $7; foreign, $8.75. Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents; telephone (202) 275-3054.

CPI MAILGRAM provides selected U.S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: $145 in contiguous U.S. and Hawaii; $160 in Alaska and Canada.

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC, and at additional mailing offices.

Price Movements
August 1990

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.9 percent before seasonal adjustment in August to a level of 131.6 (1982-84=100). For the 12-month period ended in August, the CPI-U increased 5.6 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.9 percent in August prior to seasonal adjustment. The August 1990 CPI-W level of 129.9 was 5.4 percent higher than the index in August 1989.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.8 percent in August, following a 0.4-percent increase increase in July. A sharp upturn in petroleum-based energy prices was responsible for the acceleration and accounted for over two-fifths of the advance in the August CPI-U. Gasoline and fuel oil prices rose 7.6 and 15.4 percent, respectively. Excluding energy, the CPI rose 0.4 percent in August after increasing 0.5 percent in July. Shelter costs continued to advance—up 0.7 percent in August—but by less than in each of the preceding 2 months. Food prices also rose less than in each of the preceding months, largely as a result of a downturn in prices for fruits and vegetables. The CPI-U excluding food, shelter, and energy, which advanced 0.5 percent in July, increased 0.4 percent in August.

During the first 8 months of 1990, the CPI-U rose at a 6.2-percent seasonally adjusted annual rate. This compares with a 4.8-percent rate in the first 8 months of 1989. The indexes for food, shelter, and particularly energy have each risen more during the first 8 months of 1990 than during the corresponding period last year. Excluding food, shelter, and energy, the CPI-U has also accelerated, advancing at a 5.4-percent seasonally adjusted annual rate in 1990 compared with a 3.9-percent rate during the 8-month period ended in August 1989. This increase reflects a sharp upturn in apparel prices.

The food and beverage index rose 0.3 percent in August. Grocery store food prices also increased 0.3 percent after advancing 0.4 percent in July. A sharp downturn in the index for fruits and vegetables—down 1.4 percent in August, following a 1.6-percent increase in July—more than offset the advances in the other four major grocery store food groups. Prices for fresh fruits fell 4.0 percent in August. The index for meats, poultry, fish, and eggs, which declined 0.4 percent in July, increased 0.5 percent in August, largely as a result of a sharp turnaround in egg prices—up 9.9 percent in August. Beef and poultry prices declined 0.5 and 1.3 percent, respectively, while pork prices rose 0.7 percent. The 1.3-percent increase in prices for dairy products was the largest for this group since January. The indexes for cereal and bakery products and other food at home each rose 0.6 percent in August, following increases in July of 0.3 and 0.5 percent, respectively. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—rose 0.3 and 0.2 percent, respectively, in August.

The housing component rose 0.7 percent in August, following a 0.5-percent increase in July. The index for household

fuels and other utilities, which declined 0.8 percent in July, advanced 1.3 percent in August, largely as a result of the upturn in fuel oil prices. After registering declines in each of the preceding 6 months, fuel oil prices rose 15.4 percent in August. Prices for the other two major household fuels—natural gas and electricity—were each unchanged in August. Among other utilities and public services, the index for telephone services rose 1.9 percent, reflecting an increase in local service charges. The index for cable television rose 1.1 percent in August and has advanced 13.3 percent in the last 9 months. Shelter costs increased 0.7 percent in August. Within shelter, renters' and homeowners'costs rose 1.0 and 0.6 percent, respectively, while maintenance and repair costs declined 0.7 percent. The large increase in renters' costs resulted from a 3.1-percent increase in lodging while out of town. Residential rents rose 0.4 percent. The index for household furnishings and operations declined 0.2 percent.

Transportation costs, which rose 0.3 percent in July, advanced 1.8 percent in August. A sharp increase in the index for motor fuels—up 8.1 percent in August following a 0.4-percent decline in July—was responsible for the acceleration and accounted for nearly 90 percent of the August transportation increase. As of August, gasoline prices were 16.1 percent higher than at the end of 1989 but 11.5 percent lower than their peak level of March 1981. New vehicle prices were unchanged in August and have increased only 1.9 percent in the past 12 months. Automobile finance charges declined 1.0 percent in August. Used car prices rose 0.3 percent in August, but are 1.7 percent lower than a year ago. Public transportation increased 0.2 percent, reflecting small increases in both intercity and intracity transportation costs.

The index for apparel and upkeep turned up in August—advancing 0.1 percent—after registering declines in each of the 3 preceding months. Prices increases for fall and winter merchandise introduced in August were about the same magnitude as seasonally anticipated.

The medical care component increased 0.9 percent in August to a level 9.5 percent above a year ago. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—advanced 0.5 percent. The index for medical services advanced 1.0 percent, with the cost of professional services and hospital and related services up 0.8 and 1.4 percent, respectively.

Entertainment costs advanced 0.2 percent in August to a level 4.5 percent above a year ago, the smallest 12-month change of the seven major expenditure groups. Increases in fees for club memberships and prices for sporting goods and equipment accounted for about two-thirds of the August entertainment advance.

The index for other goods and services rose 0.6 percent in August, its smallest increase since April. Advances in the indexes for school books and supplies and for tutition and other school fees accounted for almost three-fourths of the August increase in this major group.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.8 percent in August.

Consumer Price Movements, First 6 Months 1990

Thomas J. Mosimann

The Consumer Price Index for All Urban Consumers rose at a seasonally adjusted annual rate of 5.9 percent for the first 6 months of 1990. This compares with a rate of 5.7 percent for the first half of 1989, and a calendar year increase of 4.6 percent for all of 1989. Although the increases for energy and food items were more dramatic than for other components of the CPI, higher rates of increase were widespread throughout the index. The progression of prices was not steady in the first 6 months of 1990, but varied by quarter. (See table C.)

During the first 3 months of 1990, prices rose at an annual rate of 8.5 percent, nearly twice the rise in 1989. The bulk of this increase occurred in January, and was led by weather-related jumps in food and energy costs stemming from the extreme cold which much of the Nation endured during December. The increase in January alone was 1.1 percent, the largest monthly rise since June of 1982. While February and March price movements slowed from January's pace, the CPI still rose 0.5 percent each month.

The months of April, May, and June reflected a slower growth in prices across the board, moderating the effects of the first quarter. For the 3 months ended in June, the CPI rose at an annual rate of 3.5 percent. The CPI in April and May increased just 0.2 percent each month while the June rise was 0.5 percent.

A measure of the underlying rate of inflation, the index for all items less food, shelter, and energy, rose at a rate of 5.5 percent during the first half of 1990. During the first 3 months of the year this index rose at a rate of 7.9 percent, compared with 3.1 percent for the 3 months ended in June.

The indexes for energy and for food were more volatile than the rest of the CPI and exerted a strong influence on the movement of the total CPI during the first half of 1990. Much of the fluctuation of energy and food can be attributed to the supply and demand effects of cold winter weather.

Energy

Energy costs rose 3.0 percent, or at a 6.0-percent rate in the first half of 1990. It was not the magnitude of the 6-month rise in energy costs that was most significant, but rather the timing and compressed nature of the increase. Accounting for most of the first-half increase was a 5.1-percent jump in January, equaling the rise for all of 1989. During the following 5 months, energy costs fell 2.0 percent.

The main cause for the dramatic increases in energy costs was the severe cold weather the Nation faced in the early part of this past winter. The extreme low temperatures, especially in the Northeast, caused a sharp increase in the demand for fuel oil for home heating. As refiners attempted to meet the demand for fuel oil, they shifted their production capabilities from motor fuel to fuel oil. This caused the supply of gasoline and diesel fuel to fall. The result was a large price increase for both motor fuel and home heating

Thomas J. Mosimann is an economist in the Division of Consumer Prices and Price Indexes.

Table C. Percent changes and seasonally adjusted annual rates in the CPI-U for the first half of 1990

Index	SAAR 6 months ended June 1989	Percent change 12 months ended Dec. 1989	SAAR 3 months ended March 1990	SAAR 3 months ended June 1990	SAAR 6 months ended June 1990

Federal Reserve Bank of St. Louis

oil. Fuel oil costs surged 26.3 percent in January, the largest rise since 1935, when records were first kept. Motor fuel prices jumped 8.2 percent in January.

The index for energy decreased each month after January until June, when it turned up again with an increase of 0.6 percent. Leading the June turnaround were increased costs of motor fuel, which had either decreased or shown slight rises from February through May. Motor fuel prices rose 2.2 percent in June reflecting increased demand. Fuel oil prices, following January's huge increase, declined in each of the next 5 months.

Prices for electricity and natural gas did not move in concert with petroleum-based energy prices. For the 6 months ended in June, electricity rose at a rate of 1.4 percent while gas decreased at an annual rate of 5.6 percent. Both of these items increased in the first 3 months of 1990, only to decline in the 3 months ended in June. Charges for natural gas decreased at a rate of 11.9 percent from March to June primarily due to utility refunds and rate declines in the Midwest, after having risen at a 1.2-percent rate for the 3 months ended in March. Charges for electricity, which increased at a rate of 4.5 percent in the first 3 months, declined at a 1.7-percent rate for the 3 months ended in June. In June, electricity costs declined 1.6 percent as summer rate increases were not as large as seasonally expected.

Food

Food and beverage prices rose at a rate of 6.7 percent in the first half of 1990, with the largest increase occurring in January—up 1.8 percent—mainly reflecting supply shortages caused by extreme cold weather. Since January, these food costs have increased at a lesser rate, averaging 3.5 percent over the 5 months.

Accounting for 57 percent of the January increase was a 16.0-percent rise in the prices of fresh fruits and vegetables caused by freezing temperatures in winter crop-growing regions of the United States. A 75.6-percent rise in tomato prices was the most dramatic increase for the month but was assisted by double-digit increases in the indexes for other fresh vegetables (beans, peppers, broccoli, onions, cabbage, mushrooms, and carrots), oranges, lettuce, and other fresh fruits (grapes, peaches, plums, cherries, grapefruits, and berries). Another factor contributing to the steep January rise was an increase in the price of dairy products, which were up 2.4 percent. Strong demand helped push fresh milk and cream prices up 3.2 percent. Also, the index for meats, poultry, fish, and eggs increased 1.9 percent in the first month of 1990.

Prices for eggs rose 9.1 percent in January as the laying flock shortage led to a smaller supply. Beef and veal costs rose 2.0 percent while pork prices increased 1.3 percent as strong demand, especially for export, supported price rises. The indexes for food away from home and alcoholic beverages both increased moderately in January, 0.4 and 0.5 percent, respectively.

After January, food and beverage prices returned to more moderate levels, and even declined in April. Dairy products and fruits and vegetables both increased 0.9 percent in February before turning around and decreasing in March, April, and May. Dairy prices continued to be affected by heavy demand and fruits and vegetables showed the continued effects of weather-related supply reductions. Tomato prices rose 30.7 percent in February, dropped 22.8 percent in March, fell a tremendous 52.7 percent in April, and dropped 7.7 percent in May. In June, the food and beverage index rose 0.7 percent, the largest increase since January. Prices for dairy products rose 1.6 percent during the first half of the year while the more volatile fruits and vegetables index increased 4.4 percent. June saw large increases for pork, tomatoes, other fresh fruit, and carbonated beverages which pushed the index for food and beverages up 0.7 percent. Food away from home and alcoholic beverages continued to move up moderately through the first 6 months, ending the period with annual rate increases of 5.6 and 6.0 percent, respectively.

Housing

The housing index rose at a rate of 4.5 percent in the first half of 1990, compared with an increase of 3.9 percent in 1989. In the first 3 months the rate of increase in housing costs was 5.5 percent; it then slowed to 3.5 percent in the 3 months ended in June. Costs for fuel oil, gas, and electricity, all mentioned earlier, are components of housing and make up nearly 10 percent of this index.

Shelter costs rose at a rate of 5.8 percent in the first 6 months of 1990, with the increase split fairly evenly between the first and second quarters. The owners' equivalent rent index jumped 1.0 percent in March and 1.1 percent in June. The index for lodging while out of town fluctuated from month to month and ended the first 6 months with an annual rate of increase of 6.6 percent. It increased rapidly in January and February, as price pressures increased for the winter vacation season. For the 3 months ended in March, it rose at a rate of 24.3 percent. As the winter season ended, the index for lodging while out of town decreased for 3 months, and finally turned slightly up in June with the beginning of the summer vacation season.

The index for other utilities and public services rose 8.0 percent in the first 3 months of the year, more than twice the annual rate of in the second 3 months, when it rose at a rate of 3.6 percent. Charges for local telephone service, cable television, and refuse collection (which comprise the other utilities and public services component along with long-distance telephone services and water and sewerage maintenance) all rose at double-digit annual rates in the first quarter. Local telephone service was affected by rate increases, rental increases, and an end to overpayment refunds in the first quarter. Local service actually declined slightly in the second quarter. Throughout the first half of 1990, cable television increases were led by higher installation rates,

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

resulting especially from the discontinuance of many new subscriber promotions, bringing its 6-month annual rate to 18.2 percent. Refuse collection costs continued to increase rapidly, as growing regulations and a diminishing landfill capacity led to a first-half annual increase of 12.2 percent.

Costs for household furnishings and operation increased at a moderate rate of 2.3 percent in the first half of 1990. This index had risen 1.0 percent in 1989. Textile housefurnishings increased at a rate of 9.3 percent in the 3 months ended in March and fluctuated throughout the second quarter, resulting in no net change for the quarter. Furniture and bedding prices rose at a 9.5-percent rate through March, only to fall at a rate of 5.4 percent between April and June due to weak demand for new furniture. Bedroom furniture alone decreased at a rate of 10.8 percent in the second quarter. Television prices continued their generally downward trend, falling in 4 of the first 6 months. They showed an annual rate of -4.2 percent for the first half of 1990 after having decreased 1.3 percent in all of 1989. Major household appliance prices rose at a rate of 0.8 percent, as small increases for laundry equipment and for stoves, ovens, dishwashers, and air conditioners were largely offset by decreases for refrigerators and home freezers.

Apparel and upkeep

Apparel and upkeep prices rose at a rate of 9.5 percent in the first half of 1990. In the first 3 months of 1990, the index for apparel and upkeep advanced at an annual rate of 21.4 percent. This reflected the introduction of higher priced spring and summer clothing in February and March—up 3.3 and 1.6 percent, respectively. Due to an improvement in CPI pricing methodology, prices for newly arrived spring and summer fashions were collected earlier than they had been in previous years. This contributed to the large increases that seasonal adjustment could not account for early in the year. Whereas in 1989, large increases for apparel due to higher-priced seasonal clothing were reflected in March and April, in 1990 these increases occurred in February and March. February price increases were widespread across nearly all apparel items and included a 35.0-percent rise in women's suits and a 10.3-percent jump in infants' and toddlers' clothing.

Through the first 6 months, women's apparel rose at a rate of 12.7 percent, compared to 8.7 percent for girls', 4.2 percent for men's, and 6.0 percent for boys' clothing. Women's suit prices increased at an annual rate of 64.3 percent for the first half of the year. Apparel prices for infants and toddlers grew at a rate of 22.9 percent. The footwear index increased more slowly, rising at a rate of 5.3 percent with most of that increase occurring in the first quarter. Prices for apparel services rose at a rate of 7.8 percent in the first half of 1990 after rising 3.6 percent in 1989.

Transportation

The behavior of the transportation component during the first 6 months of 1990 was dominated by the movement in prices for motor fuels. During the first 6 months of the year, transportation costs rose at a 5.3-percent annual rate, after having risen 4.0 percent in 1989. Aside from the large increases in motor fuel prices, components of the private transportation index moved at a more moderate pace. Resulting from a decline in the second quarter due to rebates and price concessions, new vehicle prices showed a slight decline in the first half of 1990. Auto maintenance and repair costs rose at a rate of 4.3 percent. Other private transportation costs (for the components of the other private transportation index, see table 4) increased just 3.5 percent, annualized, and both tires and automobile finance charges declined. Public transportation costs, led by heavy increases in airline fares and intracity public transportation charges, rose at a rate of 15.4 percent in the 6 months ended in June.

Medical care

Medical care costs continued to increase more rapidly than the rest of the CPI, rising at a rate of 9.2 percent in the first half of 1990. Medical care had risen 8.5 percent in 1989, its largest advance since 1982. Large increases were spread throughout the components of the medical care index, with the biggest increases occurring for prescription drugs and outpatient services. Led by increases in brand-name drugs, prescription drug prices rose at a 10.6-percent rate, compared with nonprescription drugs and medical supplies, which rose at a rate of 6.1 percent in the first half of the year. Outpatient services rose at a rate of 10.0 percent.

Entertainment

Entertainment costs, following a 5.1-percent increase in 1989, rose at a rate of 4.4 percent in the first half of 1990. Prices for magazines, periodicals, and books, and club memberships increased at double-digit rates in the first quarter and ended the first half with rates of 7.2 percent and 5.2 percent, respectively. After increasing at a rate of 4.1 percent in the first quarter, prices for photographic supplies and equipment declined in the second quarter resulting in no change in the index for the first 6 months.

Other goods and services

The index for other goods and services rose at a rate of 8.5 percent in the first half of 1990, slightly higher than the annual increase of 8.2 percent for 1989. In the first 6 months of 1990, prices for tobacco and smoking products advanced at a 10.7-percent rate, reflecting a passthrough of wholesale price jumps and increases in local and State taxes. Other large price increases were recorded in the indexes for legal service fees, personal financial services, and school books and supplies. Charges for tuition and other school fees rose at a rate of 8.2 percent in the first half of 1990 reflecting increases at both the college level and the elementary and high school levels.

Pittsburgh-Beaver Valley, PA	2	-	125.0	-	127.1	5.2	1.7	-	-	-	-

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Regions are defined as the four Census regions.

[3] Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

[1] Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:
M - Every month.
1 - January, March, May, July, September, and November.
2 - February, April, June, August, October, and December.

[2] Regions are defined as the four Census regions.

[3] Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Seperate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from $100 in 1982-84 to $107.

For further details, see *BLS Handbook of Methods*, BLS Bulletin 2285, April 1988, and *The Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are effected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Index Point Change	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
Percent Change	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037 × 100
Equals percent change	3.7

Energy Prices

Price are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census regions cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area wiil be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU'S (U.S. Department of Energy).
1 kwh = 3,412 BTU'S (Edison Electric Institute)
1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped, however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commoditites are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Reference Base Change

Beginning with the release of data for January 1988 in February 1988, most Consumer Price Indexes have shifted to a new reference base year. All indexes previously expressed on a base of 1967 = 100, or any other base through December 1981, have been rebased to 1982-84 = 100. Only indexes with a base later than December 1981 have maintained their bases. This base change was reviewed by the Office of Federal Statistical Policy and Standards, Office of Management and Budget, and is in keeping with the Government's longstanding policy to update index bases periodically. Selection of the 1982-84 period was made to coincide with the updated expenditure weights, which are based upon data tabulated from the Consumer Expenditure Surveys for 1982, 1983, and 1984. The last rebasing of CPI data occurred in

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

February 1971, when the 1967 base was substituted for the former 1957-59 base.

Historical data for each CPI series on the new base are available from the Bureau of Labor Statistics. For the convenience of users, the BLS will continue to publish all-items indexes for the U.S. city average, and for the individual local areas for which CPI's are published, on their former official reference base (1967=100 in most cases).

Conversion factors and an accompanying fact sheet on rebasing are available from BLS. Dividing by one of these factors will rebase the related index series from its current 1982-84 base to its previous reference base. *(Users should note:* Because of rounding effects, there may be occasional minor differences between the final rebased index and the result obtained using the conversion factor.)

Adjustment of Shelter Indexes for Aging Effects

Beginning with the January 1988 CPI, the Bureau of Labor Statistics adjusted the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.[1] The adjustment affects CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of a housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing units.[2] The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect. The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

[1] A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Buisness and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, pp. 162-78. These papers are available from the BLS on request.

[2] For details on existing quality adjustment methods, see, *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2285).

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data are also used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1985 through 1989 were replaced at the end of 1989. The seasonal movement of all items and 45 other aggregations is derived by combining the seasonal movement of 55 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 55 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years,

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors. For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For some women's apparel indexes and the girls'apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars and for new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Washington, DC 20212 or by calling Claire McAnaw on (202)504-2051.
