BUREAU OF LABOR STATISTICS

Office of Prices and Living Conditions

Kenneth V. Dalton, *Associate Commissioner*

The *CPI Detailed Report*—(ISSN 0161-7311) is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Subscription price per year: \$26 domestic, \$32.50 foreign. Single copy domestic, \$7.00; foreign, \$8.75. Prices are subject to change by the U.S. Government Printing Office.

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or telephone (202) 512-2311. POSTMASTER: Send address changes to CPI Detailed Report, U.S. Government Printing Office, Washington, DC 20402.

For Technical information call the CPI Information and Analysis Office at (202) 606-7000, or write to Consumer Price Indexes, 2 Massachusetts Avenue, NE, Room 3615, Washington, DC 20212-0001.

CPI MAILGRAM provides selected U. S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Information in this publication will be made available to sensory impaired individuals upon request. Voice phone: (202) 606-STAT; TDD phone: (202) 606-5897; TDD message referral phone: 1-800-326-2577

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC and at additional mailing offices.

Price Movements February 1993

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.4 percent before seasonal adjustment in February to a level of 143.1 (1982-84=100). For the 12-month period ended in February, the CPI-U increased 3.2 percent.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) increased 0.3 percent in February prior to seasonal adjustment. The February 1993 CPI-W level of 140.7 was 3.2 percent higher than the index in February 1992.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.3 percent in February, following a 0.5-percent increase in January. The index for apparel and upkeep, which turned up in January after declining slightly in the second half of 1992, increased 1.5 percent in February and accounted for about one quarter of the advance in the overall CPI-U. Each of the six other major expenditure groups, however, rose less than in January. Energy costs fell in February as a decline in charges for energy services more than offset an increase in the index for petroleum-based energy. The food index, which increased 0.4 percent in January, rose 0.1 percent in February. The moderation was largely a result of a sharp downturn in prices for fresh fruits and vegetables. Excluding food and energy, the CPI-U rose 0.5 percent, the same

as in January. The February increase principally reflects the sharp jump in apparel prices.

The food and beverages index increased 0.1 percent in February. The index for grocery store foods rose 0.2 percent after advancing 0.4 percent in January, largely as a result of a sharp downturn in prices for fresh fruits and vegetables. After advancing by 1.0 percent or more in each of the 3 preceding months, the index for fresh fruits and vegetables declined 1.2 percent in February. A decrease in prices for dairy products and a slightly smaller increase in the index for meats, poultry, fish, and eggs also contributed to the deceleration in prices for grocery store foods. Within the latter category, the indexes for beef and pork rose 0.4 and 0.1 percent, respectively, while poultry prices fell 1.1 percent. Partially offsetting these movements were larger increases in the indexes for cereal and bakery products and other food at home. The 1.0-percent rise in the February index for cereal and bakery products was its largest advance since a similar increase in January 1992. The index for restaurant meals rose 0.1 percent, while the index for alcoholic beverages was unchanged in February.

The housing component, which increased 0.3 percent in January, rose 0.2 percent in February. The index for household fuels and utilities turned down in February, and shelter costs increased less than in January. The index for household fuels fell 1.3 percent in February, reflecting de-

clines in charges for gas and electricity—down 0.2 and and 2.1 percent, respectively. The index for fuel oil rose 1.2 percent. The index for other utilities and public services advanced 0.7 percent, largely as a result of a 3.1-percent increase in charges for cable television. Shelter costs rose 0.3 percent in February. Within shelter, renters' costs increased 0.4 percent; homeowners' costs, 0.3 percent; and maintenance and repair costs, 0.6 percent. The 0.3-percent rise in the index for household furnishings and operation was the largest increase in this component since June 1992.

Transportation costs rose 0.5 percent in February, following a 0.6-percent increase in January. As in January, advances in the indexes for motor fuels and airline fares were again largely responsible for the rise in this major group—accounting for more than half of the February increase. The index for gasoline again failed to decline as much as seasonally anticipated, increasing 0.6 percent in February after advancing 1.5 percent in January. (Prior to seasonal adjustment, these indexes fell 1.6 percent in January and 0.7 percent in February.) Automobile purchase costs, which turned up in January, also rose moderately in February. The new vehicle index increased 0.2 percent, reflecting a 1.0-percent rise in prices for new trucks, while the index for automobile finance charges was unchanged. The index for public transportation increased 1.5 percent, reflecting a 2.2-percent rise in airline fares.

The index for apparel and upkeep, which increased 0.8

percent in January, advanced 1.5 percent in February, largely as a result of higher prices for spring and summer clothing. (Prior to seasonal adjustment, clothing prices rose 3.2 percent in February.)

The medical care component rose 0.5 percent in February to a level of 6.3 percent above a year ago. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical care supplies—rose 0.4 percent. The index for medical care services increased 0.5 percent, with the cost of professional services and hospital and related services up 0.3 and 1.0 percent, respectively.

Entertainment costs increased 0.1 percent in February. Higher fees for club memberships and for participant sports—up 0.9 and 1.3 percent, respectively—were largely offset by a 1.2-percent drop in the index for admissions to movies, theaters, and concerts.

The index for other goods and services increased 0.4 percent in February, following a 0.8-percent advance in January. A substantially smaller increase in the index for tobacco and smoking products—up 0.6 percent in February after advancing 1.9 percent in January—was largely responsible for the moderation.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.4 percent in February.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986 = 100 base.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NA Data not adequate for publication.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, gasoline stations and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by personal visits of the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: The price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details see *BLS Handbook of Methods*, BLS Bulletin 2414, September 1992 and The *Consumer Price Index: 1987 Revision*, BLS Report 736, January 1987.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index Point Change</i>	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
<i>Percent Change</i>	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

Prices are usually available for the U.S. city average, 28 large urban areas, and 16 areas reflecting the four Census region cross-classified by four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average price is available, the designation NA will also appear if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban area priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average price per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy).
1 kwh = 3,412 BTU'S (Edison Electric Institute).
1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped however, that regional average prices will help satisfy the need for local area data. It should be noted that the average food prices in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA will appear. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price will not be published and NA will appear for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Adjustment of Shelter Indexes for Aging Effects

Beginning with January 1988 CPI, the Bureau of Labor Statistics adjust the monthly CPI shelter indexes for the change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the

chosen method is operationally feasible.¹ The adjustment affect CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing unit.²

The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation

purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

In most cases, seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, e.g., data from 1987 through 1991 were replaced at the end of 1991. The seasonal movement of all items and 47 other aggregations is derived by combining the seasonal movement of 60 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 60 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used for the last 5 years, but the seasonally adjusted indexes will be used before that period.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis in conjunction with X-11-ARIMA for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors in X-11-ARIMA.

For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars, new trucks, and new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. For the tobacco and smoking products index, this procedure was used to offset the effects of increases in excise taxes and wholesale tobacco prices. For some alcoholic beverage series, intervention was used to offset the effects of excise tax increases.

An alternative to the intervention-adjusted X-11-ARIMA procedure is the state space model-based seasonal adjustment method. This method adjusts simultaneously for interventions and seasonal effects, rather than sequentially as in the X-11-ARIMA methodology, using structural statistical models with explanatory variables. The state space structural model-based method of seasonal adjustment was introduced in 1992 for the adjustment of January 1991-December 1991 indexes for three women's apparel series: Dresses, Separates and sportswear, and Suits.

A description of intervention analysis, as well as a list of events treated as interventions and seasonal factors for

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, 162-78. These papers are available from the BLS on request.

CPI on Electronic Bulletin Board

A limited amount of CPI information is currently available via the Department of Labor's electronic bulletin board system (BBS). The data is accessible for downloading free of charge at virtually anytime to any person who has a personal computer with a modem and communications software. The phone number for the BBS is (202) 219-4784.

Included on the *Labor News* BBS are all items indexes for the CPI-U and CPI-W for both the U.S. city average and the Washington, D.C. area from 1980 to the present. Also included on the BBS are average prices for the U.S. from 1990 to the present for natural gas, electricity, fuel oil, and gasoline (all types, unleaded regular, and unleaded premium). More indexes or average prices may be added in the future.

The BBS is set to use the most common personal computer parameters. Users should set their communication software to the following:

BAUD RATE: 300-14,400 bps
DATA BITS: 8
STOP BITS: 1
PARITY: NONE
FULL DUPLEX
TERMINAL TYPE: ANSI, VT100, or ANSI-BBS

The *Labor News* BBS is divided into different sections, or "Libraries," with the one containing CPI information being CPIINFO.

"Labor News" is a menu-driven BBS. Users can select among choices presented on the screen to access the information desired. Typing a "?" will bring up a "Help" screen for on-line assistance. It is also possible to download a users manual for the BBS.

Please note that the BBS shuts down for maintenance every day from 3:00 A.M. to 3:15 A.M. (Eastern time), and Mondays from 7:30 A.M. to 8:00 A.M.

The system operator of the *Labor News* BBS, Don Berry, may be reached at (202) 219-7343. The system operator of the CPI Library, Joe Chelena, may be reached at (202) 606-6982 or via E-mail through the BBS under the name JOEC.
