The *CPI Detailed Report*—(ISSN 0161-7311) is a monthly report on consumer price movements, including statistical tables and technical notes. The report covers two indexes, the Consumer Price Index for All Urban Consumers (CPI-U) and the Consumer Price Index for Wage Earners and Clerical Workers (CPI-W). The indexes reflect data for the U.S. city average and selected areas.

A subscription may be ordered for 1 or 2 years from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or by calling (202) 783-3238, Visa or Mastercard accepted. FAX (202) 512-2233. Subscription price per year: \$23 domestic, \$28.75 foreign. Single copy domestic, \$7.50; foreign, \$9.38. Prices are subject to change by the U.S. Government Printing Office.

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or telephone (202) 512-1806. POSTMASTER: Send address changes to *CPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402.

For Technical information call the CPI Information and Analysis Office at (202) 606-7000, or write to Consumer Price Indexes, 2 Massachusetts Avenue, NE, Room 3615, Washington, DC 20212-0001.

CPI MAILGRAM provides selected U. S. City Average data for CPI-U and CPI-W within 24 hours of release. Order from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161. Subscription rates: \$145 in contiguous U.S. and Hawaii; \$160 in Alaska and Canada.

Information in this publication will be made available to sensory impaired individuals upon request. Voice phone: (202) 606-STAT; TDD phone: (202) 606-5897; TDD message referral phone: 1-800-326-2577. This material is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC and at additional mailing offices.

Price Movements

June 1995

The Consumer Price Index for All Urban Consumers (CPI-U) rose 0.2 percent before seasonal adjustment in June to a level of 152.5 (1982-84=100). For the 12-month period ended in June, the CPI-U increased 3.0 percent. (See table A.)

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) also increased 0.2 percent in June, prior to seasonal adjustment. The June 1995 CPI-W level of 149.9 was 3.1 percent higher than the index in June 1994.

CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U rose 0.1 percent in June. The food index rose 0.1 percent in June, the same as in May. Energy costs advanced for the third consecutive month—up 0.5 percent in June. Excluding food and energy, the CPI-U advanced 0.2 percent for the second consecutive month, after registering an increase of either 0.3 and 0.4 percent in each of the first 4 months of 1995. (See table A.) The moderation in the last 2 months resulted, in part, from a downturn in the indexes for used cars and automobile finance charges, each of which had risen sharply during the first 4 months of 1995.

Consumer prices rose at a seasonally adjusted annual

rate (SAAR) of 3.2 percent in the second quarter, the same as in the first quarter of 1995. The 3.2-percent annual rate during the first 6 months of 1995 compares with an increase of 2.7 percent for all of 1994. Thus far in 1995, as throughout most of the preceding 4 years, the food and energy components have continued to act as moderating influences on consumer price movements. Through the first 6 months of 1995, the food index increased at a 1.8-percent annual rate and energy costs have risen at a 2.1-percent rate. A 0.3-percent decrease at an annual rate in the index for energy services partially offset a rise at a 4.7-percent rate in the index for petroleum-based energy goods.

Excluding food and energy, the CPI-U has advanced at a 3.6-percent annual rate thus far in 1995. This follows a 2.6-percent increase in all of 1994. The acceleration in 1995 thus far reflects an increase in charges for services, particularly those for shelter and transportation. The index for services less energy, which increased 3.2 percent in 1994, has risen at a 4.5-percent rate in 1995. The index for commodities less food and energy has risen at a 1.6-percent annual rate, following a 1.4-percent increase in all of 1994. The rates for selected groups during the past 8½ years are shown below.

The food and beverage index rose 0.1 percent in June, the same as in May. Grocery store food prices were unchanged on average in June. The index for fruits and vegetables rose 0.7 percent as a 4.5-percent increase in the index for fresh fruits more than offset a 3.0-percent drop in fresh vegetable prices. (Prior to seasonal adjustment, fresh fruit prices fell 1.5 percent.) The index for processed fruits and vegetables increased 0.4 percent. Among other major grocery store food groups, the index for cereal and bakery products rose 0.2 percent; the indexes for dairy products and for meats, poultry, fish, and eggs each declined; and the index for other food at home was unchanged. Within the index for meats, poultry, fish, and eggs, the indexes for beef and pork fell again in June and each was lower than a year ago. Poultry prices rose 0.9 percent in June, but were still lower than a year earlier. The other two components of the food and beverage index—restaurant meals and alcoholic beverages—each rose 0.1 percent in June.

The housing component rose 0.2 percent in June. Shelter costs increased 0.2 percent, following advances of 0.4 percent in each of the 2 preceding months. Within shelter, renters' costs increased 0.1 percent; homeowners' costs, 0.2 percent; and maintenance and repair costs, 0.3 percent. The index for fuel and utilities, which declined 0.4 percent in May, rose 0.4 percent in June. The index for household fuels increased 0.5 percent, as a 1.1-percent decrease in charges for natural gas partially offset increases in the indexes for fuel oil and electricity of 0.9 and 1.1 percent, respectively. (Prior to seasonal adjustment, charges for electricity rose 6.6 percent, reflecting the switch to higher summer rates in some areas.) The index for other utilities and public services rose 0.3 percent, reflecting moderate increases in the indexes for water and sewerage maintenance, refuse collection, and local telephone service charges. The index for household furnishings and operation declined 0.2 percent in June.

The transportation index rose 0.4 percent in June and has risen at a 6.4-percent annual rate during the first 6 months of 1995. A sharp advance in airline fares was responsible for the June increase in the transportation index. The index for airline fares rose 8.4 percent in June and has increased 20.4 percent in the first half of 1995 after registering a 9.5-percent decline in all of 1994. The index for gasoline increased for the third consecutive month—up 0.4 percent in June—but by substantially less than in May. (Prior to seasonal adjustment, gasoline prices rose 2.0 percent.) The index for new vehicles continued to increase moderately, advancing 0.2 percent in June and at a 2.7-percent annual rate in the first half of 1995. Automobile finance charges, which turned down in May after increasing by 1.0 percent or more in each of the preceding 13 months, fell 2.4 percent in June. The index for used cars also declined for the second consecutive month—down 1.1 percent in June—after increasing 15.8 percent in the 12-month period ended in April.

The index for apparel and upkeep declined 0.3 percent in June, reflecting somewhat larger than usual seasonal price declines for most clothing items. (Prior to seasonal adjustment, clothing prices fell 2.4 percent.)

Medical care costs have increased 0.3 percent in each of the first 6 months of 1995. As of June, the index was 4.5 percent higher than a year earlier. The index for medical care commodities—prescription drugs, nonprescription drugs, and medical supplies—registered its first monthly increase in 1995, up 0.3 percent in June. The index for medical care services rose 0.3 percent. Charges for professional services and hospital and related services each increased 0.3 percent.

Entertainment costs declined 0.2 percent in June. A 2.3-percent decrease in the index for fees for participant sports was largely responsible for the June decrease.

The index for other goods and services increased 0.4

percent in June, the same as in May. The index for tobacco and smoking products rose 0.9 percent in June, following a 0.5-percent increase in May. These advances follow an increase in wholesale prices announced in early May, the first since November 1993.

CPI for Urban Wage Earners and Clerical Workers (CPI-W)

On a seasonally adjusted basis, the CPI for Urban Wage Earners and Clerical Workers rose 0.1 percent in June.

CPI-U 12-month changes, 1987 to present

Understanding the Consumer Price Index: Answers to Some Questions

The continually growing uses and users of the Consumer Price Index (CPI) have generated an increasing number of questions about the CPI. Although the Bureau of Labor Statistics (BLS) has provided extensive material to the public describing the CPI since its 1987 revision, much of this material has been quite technical. BLS has developed this article, therefore, to 1) answer 22 frequently asked questions about the CPI, 2) familiarize users of the CPI with some of the most important of the procedures introduced with the 1987 CPI revision, and 3) help users of the CPI better understand its uses and limitations.

(1) What is the CPI?

The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a fixed market basket of consumer goods and services from A to Z. The CPI provides a way for consumers to compare what the market basket of goods and services costs this month with what the same market basket cost a month or a year ago.

(2) How is the CPI used?

The Consumer Price Index affects nearly all Americans because of the many ways it is used. Three major uses are:

1. *As an economic indicator.* The CPI is the most widely used measure of inflation and is sometimes viewed as an indicator of the effectiveness of government economic policy. It provides information about price changes in the Nation's economy to government, business, labor, and other private citizens, and is used by them as a guide to making economic decisions. In addition, the President, Congress, and the Federal Reserve Board use trends in the CPI to aid in formulating fiscal and monetary policies.

2. *As a deflator of other economic series.* The CPI and its components are used to adjust other economic series for price changes and to translate these series into inflation-free dollars. Examples of series adjusted by the CPI include retail sales, hourly and weekly earnings, and components of the national income and product accounts.

An interesting example of this is the use of the CPI as a deflator of the value of the consumer's dollar to find its purchasing power. The purchasing power of the

consumer's dollar measures the change in the quantity of goods and services a dollar will buy at different dates. In other words, as prices increase, the purchasing power of the consumer's dollar declines.

3. *As a means of adjusting dollar values.* As inflation erodes consumers' purchasing power, the CPI is often used to adjust consumers' income payments, for example, Social Security; to adjust income eligibility levels for government assistance; and to automatically provide cost-of-living wage adjustments to millions of American workers.

The CPI affects the income of almost 70 million persons as a result of statutory action: 43.1 million Social Security beneficiaries, about 22.6 million food stamp recipients, and about 3.9 million military and Federal Civil Service retirees and survivors. Changes in the CPI also affect the cost of lunches for 24.2 million children who eat lunch at school, while collective bargaining agreements that tie wages to the CPI cover about 2.8 million workers.

Another example of how dollar values may be adjusted, is the use of the CPI to adjust the Federal income tax structure. These adjustments prevent inflation-induced increases in tax rates, an effect called "bracket creep."

(3) Is the CPI a cost-of-living index?

No, although it frequently and mistakenly is called a cost-of-living index. *The CPI is an index of price change only.* It does not reflect the changes in buying or consumption *patterns* that consumers probably would make to adjust to relative price changes. For example, if the price of beef increases more rapidly than other meats, shoppers may shift their purchases away from beef to pork, poultry, or fish. If the charges for household energy increase more rapidly than for other items, households may buy more insulation and consume less fuel. The CPI does not reflect this substitution among items as a cost-of-living index would. Rather, the CPI assumes the purchase of the same market basket, in the same fixed proportion (or weight) month after month. About every 10 years the market basket is thoroughly updated to allow for the introduction of new products and services and to reflect more current spending patterns. (See question 6.) In addition, the CPI does not reflect taxes that are not directly associated with the purchase of specific goods and services.

In other words, the CPI excludes taxes such as income and Social Security taxes.

It is important to note that local area CPI's cannot be used to compare levels of living costs or prices between areas. (See answer to question 17: "Can the CPI's for individual areas be used to compare living costs among the areas?")

(4) Whose buying habits does the CPI reflect?

The CPI reflects spending patterns for each of two population groups: *All Urban Consumers (CPI-U)* and *Urban Wage Earners and Clerical Workers (CPI-W)*. The CPI-U represents about 80 percent of the total U.S. population. It is based on the expenditures reported by almost all urban residents, including professional employees, the self-employed, the poor, the unemployed, and retired persons as well as urban wage earners and clerical workers. Not included in the index are the spending patterns of persons living outside urban areas, farm families, persons in the Armed Forces, and those in institutions (such as prisons and mental hospitals).

The CPI-W is based on the expenditures of urban households that meet additional requirements: More than one-half of the household's income must come from clerical or wage occupations and at least one of the household's earners must have been employed for at least 37 weeks during the previous 12 months. The CPI-W's population represents about 32 percent of the total U.S. population and is a subset, or part, of the CPI-U's population.

(5) Does the CPI measure my experience with price change?

Not necessarily. It is important to understand that BLS bases the market baskets and pricing procedures for the CPI-U and CPI-W on the experience of the relevant average household, not of any specific family or individual. It is unlikely that your experience will correspond precisely with either the national indexes or those for specific cities or regions.

For example, if you or your family spend a larger than average share of your budget on medical expenses, and medical care costs are increasing more rapidly than other items in the CPI market basket, your personal rate of inflation (or experience with price change) may exceed the CPI. Conversely, if you heat your home with solar energy, and fuel prices are rising more rapidly than other items, you may experience less inflation than the general population.

This phenomenon explains why people sometimes question the accuracy of the published indexes. A national average reflects all the ups and downs of millions of individual price experiences. It seldom mirrors a particular consumer's experience.

(6) How is the CPI market basket chosen?

The CPI market basket is developed from detailed expenditure information provided by families and individuals on what they actually bought. For the current CPI, this information was collected from the Consumer Expenditure Sur-

vey over the 3 years 1982, 1983, and 1984. In each of the 3 years, about 4,800 families, from around the country, provided information on their spending habits in a series of quarterly interviews. To collect information on frequently purchased items, such as food and personal care products, another 4,800 families in each of the 3 years kept diaries listing everything they bought during a 2-week period.

Altogether, about 29,000 individuals and families provided expenditure information for use in determining the importance, or weight, of each item in the index structure.

Due to time constraints, we used data from only the first 2 years of the Consumer Expenditure Survey to select the items to be priced. In addition, we update the sample of stores and service outlets in roughly 20 percent of the urban areas priced for the CPI each year. New items are introduced with these new samples.

(7) What goods and services does the CPI cover?

The CPI represents all goods and services purchased for consumption by urban households. We have classified all expenditure items into over 200 categories, arranged into 7 major groups. Major groups and examples of categories in each are as follows:

- Food and beverages (cookies, cereals, cheese, coffee, chicken, beer and ale, restaurant meals);
- Housing (residential rent, homeowners' costs, fuel oil, soaps and detergents, televisions, local telephone service);
- Apparel and its upkeep (men's shirts, women's dresses, jewelry);
- Transportation (airline fares, new and used cars, gasoline, car insurance);
- Medical care (prescription drugs, eye care, physicians' services, hospital rooms);
- Entertainment (newspapers, toys, musical instruments, admissions); and
- Other goods and services (haircuts, college tuition, bank fees).

In addition, the CPI includes various user fees such as water and sewerage charges, auto registration fees, vehicle tolls, and so forth. Taxes that are directly associated with the prices of specific goods and services (such as sales and excise taxes) are also included. But, the CPI excludes taxes not directly associated with the purchase of consumer goods and services (such as income and Social Security taxes).

The CPI does not include investment items (such as stocks, bonds, real estate, and life insurance). These items relate to savings and not day-to-day living expenses.

For each of the over 200 item categories, the Bureau has chosen samples of several hundred specific items within selected business establishments, using scientific statistical procedures, to represent the thousands of varieties available in the marketplace. For example, in a given supermarket,

the Bureau may choose a plastic bag of golden delicious apples, U.S. extra fancy grade, weighing 4.4 pounds to represent the "Apples" category.

(8) How are CPI prices collected and reviewed?

Each month, Bureau of Labor Statistics (BLS) field representatives visit or call thousands of retail stores, service establishments, rental units, and doctors' offices, all over the United States to obtain price information on thousands of items in the CPI market basket. For the entire month they record the prices of about 90,000 items. These 90,000 prices represent a scientifically-selected sample of the prices of goods and services sold to urban consumers throughout the country.

During each call or visit, the field representative collects price data on a specific good or service that was precisely defined during an earlier visit. If the selected item is available, the field representative records its price. If the selected item is no longer available or if there have been changes in the quality or quantity (for example, eggs sold in packages of 8 when previously they had been sold by the dozen) of the good or service since the last time prices had been collected, the field representative selects a new item or records the quality change in the current item.

The recorded information is sent to the national office of BLS where commodity specialists, who have detailed knowledge about the particular goods or services priced, review the data. The specialists check the data for accuracy and consistency and make any necessary corrections or adjustments. These can range from an adjustment for a change in the size or quantity of a packaged item to more complex adjustments based upon statistical analysis of the value of an item's features or quality. Thus, the commodity specialists strive to keep changes in the quality of items from affecting the CPI's measurement of price change.

(9) How is the CPI calculated?

The CPI is a product of a series of interrelated samples. First, using data from the 1980 Census of Population, BLS selects the urban areas from which prices are to be collected and chooses the housing units within each area that are eligible for use in the shelter component of the CPI. The Census of Population also provides the data which allows the assigning of the number of consumers represented by each area priced for the CPI. Next, another sample of about 24,000 families serves as the basis for a Point-of-Purchase survey that identifies the places where households purchase various types of goods and services.

Data from the Consumer Expenditure Survey conducted from 1982 through 1984, involving a national sample of almost 29,000 families, provided detailed information on their spending habits. This enabled BLS to construct the CPI market basket of goods and services and to assign each item in the market basket a weight or importance based on total family expenditures. The final stage in the sampling process is the selection of the specific detailed item to be

priced in each outlet. This is done using a method called "disaggregation." For example, BLS field representatives may be directed to price "fresh whole milk." Through the disaggregation process, the field representative selects the specific kind of fresh whole milk that will be priced over time in the outlet. By this process, each kind of whole milk is assigned a probability, or weight, based on the quantity of it the store sells. If, for example, Vitamin D, homogenized milk in half-gallon containers makes up 70 percent of the sales of fresh whole milk, and the same milk in quart containers accounts for 10 percent of all whole milk sales, then the half-gallon container will be seven times more likely to be chosen than the quart container. After probabilities are assigned, one kind of milk is chosen by an objective selection process based on the theory of random sampling. The particular kind of milk that is selected by disaggregation will continue to be priced each month in that outlet.

To sum up, the price movement measurement (see question 8) is weighted by the importance of the item in the spending patterns of the appropriate population group. The combination of all these factors gives a weighted measurement of price change for all the items in all the outlets, in all the areas priced for the CPI.

(10) How do I read or interpret an index?

An index is a tool that simplifies the measurement of movements in a numerical series. Most of the specific CPI indexes have a 1982-84 reference base. That is, we set the average index level (representing the average price level)—for the 36-month period covering the years 1982, 1983, and 1984—equal to 100. We measure changes in relation to that figure. An index of 110, for example, means there has been a 10-percent increase in price since the base period; similarly an index of 90 means a 10-percent decrease. Movements of the index from one date to another can be expressed as changes in index points (simply, the difference between index levels), but it is more useful to express the movements as percent changes. This is because index points are affected by the level of the index in relation to its base period, while percent changes are not.

In the following table, item A increased by half as many index points as item B. Yet, because of the different starting figures, both had the same percent change; that is, prices advanced at the same rate. On the other hand, items B and C show the same change in index points, but the percent change is much greater for item C because of its lower starting value.

	Item A	Item B	Item C
Year I	112.5	225.0	110.0
Year II	121.5	243.0	128.0
Change in index points	9.0	18.0	18.0
Percent change	9.0/112.5 x 100 = 8.0	18.0/225.0 x 100 = 8.0	18.0/110.0 x 100 = 16.4

We usually update reference base periods every 10 years

or so to make it easier for people to relate changes in the CPI to other economic and cultural changes. We chose the 1982-84 period because it coincided with the time period of the CPI's expenditure weights.

(11) Is the CPI the best measure of inflation?

Inflation is the widespread and persistent increase in costs and prices over the Nation's entire price and cost structure, with expectations that the increase will continue to occur in the future.

Various techniques have been devised to measure different aspects of inflation. The CPI measures inflation as experienced by consumers in their day-to-day living expenses; the Producer Price Index (PPI) captures it at earlier stages of the production and marketing process; the Employment Cost Index (ECI) measures it in the labor market; the BLS' International Price Program measures it for imports and exports; and the Gross Domestic Product Deflator (GDP-Deflator) measures combine the experience with inflation of governments (Federal, State, and local), businesses, and consumers. Finally, there are more specialized measures, such as measures of interest rates and measures of consumers' and business executives' expectations.

The "best" measure of inflation for a given application depends on the intended use of the data. The CPI is generally the best measure for adjusting payments to consumers when the intent is to allow them to purchase, at today's prices, the same market basket of consumer goods and services that they could purchase in an earlier reference period. It is also the best measure to use to translate retail sales and hourly or weekly earnings into real or inflation-free dollars.

(12) Which index is the "Official CPI" reported in the media?

Each month, BLS releases thousands of detailed CPI numbers to the press. However the press generally focuses on the broadest, most comprehensive CPI. This is known as "The Consumer Price Index for All Urban Consumers (CPI-U) for the U.S. City Average for All Items, 1982-84 = 100." Often, the media will report some or all of the following:

- a. The index level (for example, July 1992 = 140.5)
- b. The 12-month percent change (for example, July 1991 to July 1992 = 3.2 percent).
- c. The 1-month percent change on a seasonally adjusted basis (for example, from June 1992 to July 1992 = 0.1 percent).
- d. The annual rate of percent change so far this year (for example, from December 1991 to July 1992 if the rate of increase over the first 7 months of the year continued for the full year, after the removal of seasonal influences, the rise would be 2.9 percent).
- e. The annual rate based on the latest seasonally adjusted 1-month change. For example, if the June 1992 to July 1992 rate continued for a full 12 months, the rise, compounded, would be 1.7 percent.

(13) What index should I use for escalation?

The decision to employ an escalation mechanism, as well as the choice of the most suitable index, is up to the user. When drafting the terms of an escalation provision for use in a contract to adjust future payments, both legal and statistical questions can arise. While BLS cannot help in any matters relating to legal questions, it does provide basic technical and statistical assistance to users who are developing indexing procedures.

Some examples of technical or statistical guidelines from BLS follow:

- BLS strongly recommends using indexes unadjusted for seasonal variation (i.e., not seasonally adjusted indexes) for escalation. (See answer to question 14 for a further explanation of seasonally adjusted indexes and why we don't recommend seasonally adjusted indexes for use in escalation).
- BLS recommends using national or regional indexes for escalation due to the volatility of the local indexes. (See answer to question 15 for an explanation of this point).

If you have further questions, the Bureau has prepared a detailed report, *Using the Consumer Price Index for Escalation*. For copies, write or call the nearest BLS regional office listed at the end of this report, or call (202) 606-7000.

(14) When should I use seasonally adjusted data?

By using seasonally adjusted data, economic analysts and the media find it easier to see the underlying trend in short-term price change. It is often difficult to tell from raw (unadjusted) statistics whether developments between any 2 months reflect changing economic conditions or only normal seasonal patterns. Therefore, many economic series, including the CPI, are seasonally adjusted to remove the effect of seasonal influences on the changes, thereby revealing the underlying trend. Seasonal influences are those that normally occur at the same time and in about the same magnitude every year. They include price movements resulting from changing climatic conditions, production cycles, model changeovers, and holidays. We re-estimate or revise seasonally adjusted indexes annually.

The unadjusted data reflect the actual prices consumers pay. Therefore, unadjusted data are appropriate for escalation purposes.

(15) What area indexes are published, and how often?

Besides monthly publication of the national (or U.S. City Average) CPI-U and CPI-W, monthly indexes are also published for the four regions—Northeast, North Central, South, and West. Monthly indexes are also published for urban areas classified by population size—all metropolitan areas over 1.2 million, mid-sized metropolitan areas, small metropolitan areas, and all nonmetropolitan urban areas. Indexes also

are available within each region cross-classified by area size. For the Northeast and West, however, some of the population-size classes are not available. BLS also publishes indexes for 29 local areas. These local area indexes are byproducts of the national CPI program. Each local index has a much smaller sample size than the national or regional indexes and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes are more volatile than the national or regional indexes, even though their long-term trends are similar. Therefore, BLS strongly urges users to consider adopting the national average (or regional) CPI's for use in their escalator clauses. If used with caution, local area CPI data can be used to illustrate and explain the effect of local economic conditions on consumers' experience with price change. Local area data are available on the following schedule.

We publish five major metropolitan areas monthly:

Chicago-Gary-Lake County, IL-IN-WI
 Los Angeles-Anaheim-Riverside, CA
 New York-Northern NJ-Long Island, NY-NJ-CT
 Philadelphia-Wilmington-Trenton, PA-NJ-DE-MD
 San Francisco-Oakland-San Jose, CA

Data for an additional 10 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April, etc.) month schedule] for the following areas:

Baltimore, MD	-odd
Houston, TX	-even
Boston-Lawrence-Salem, MA-NH	-odd
Miami-Fort Lauderdale, FL	-odd
Cleveland-Akron-Lorain, OH	-odd
Pittsburgh-Beaver Valley, PA	-even
Dallas-Fort Worth, TX	-even
St. Louis-East St. Louis, MO-IL	-odd
Detroit-Ann Arbor, MI	-even
Washington, DC-MD-VA	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks into the following month.)

Data are published for another group of 12 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for:

Anchorage, AK	Kansas City, MO-KS
Atlanta, GA	Milwaukee, WI
Buffalo-Niagara Falls, NY	Minneapolis-St. Paul, MN-WI
Cincinnati-Hamilton, OH-KY-IN	Portland-Vancouver, OR-WA
Denver-Boulder, CO	San Diego, CA
Honolulu, HI	Seattle-Tacoma, WA

Finally, BLS recently began publication of CPI's for two metropolitan areas on an annual basis. These indexes represent the arithmetic averages for the 12-month period from January through December of each year. They are published

with the release of the CPI for January, i.e., in February. These areas are:

New Orleans, LA
 Tampa-St. Petersburg-Clearwater, FL

(16) What area CPI should I use if there is no CPI for the area I live in?

Although the BLS can provide some guidance on this question, users must make the final decision.

As noted in the answers to Questions 13 and 15, BLS strongly urges the use of national or at least regional CPI's for use in escalator clauses. These indexes are more stable and subject to less sampling and other measurement error than local area indexes. They are, therefore, more statistically reliable.

(17) Can the CPI's for individual areas be used to compare living costs among the areas?

No, an individual area index measures how much prices have changed in that particular area over a specific time period. It does not show whether prices or living costs are higher or lower in that area relative to another. In general, both the market basket and relative prices of goods and services in the base period vary substantially across areas.

The following illustration shows that while Area B has higher prices than Area A, the price change in Area A has been greater than in Area B. The CPI measures the rates of change in prices rather than the level of prices.

	<i>Base Period</i>		<i>Current Period</i>	
	<i>Price</i>	<i>Index</i>	<i>Price</i>	<i>Index</i>
Area A	\$0.30	100	\$0.55	183
Area B	.60	100	.90	150

(18) What types of data are published?

There are many types of data published as outputs from the CPI program. The most popular are indexes and percent changes. Requested less often are relative importance (or relative expenditure weight) data, base conversion factors (to convert from one CPI reference base to another), seasonal factors (the monthly factors used to convert unadjusted indexes into seasonally adjusted indexes), and average food and energy prices. Index and price change data are available for the U.S. City Average (or national average), for various geographic areas (regions and metropolitan areas), for size classes of urban areas, and for cross-classifications of regions and size classes. Indexes for various groupings of items are available for all geographic areas and size classes.

There are individual indexes available for over 200 items (e.g., apples, men's shirts, airline fares), and over 120 different combinations of items (e.g., fruits and vegetables, food at home, Food and beverages, and all items), at the national or U.S. City Average level. BLS classifies consumer items into seven major groups: Food and beverages, housing, apparel and upkeep, transportation, medical care, entertain-

ment, and other goods and services. Some indexes are available as far back as 1913.

Each month, indexes are published along with short-term percent changes, the latest 12-month change and, at the national item and group level, unadjusted and (where appropriate) seasonally adjusted percent changes (and seasonal factors), together with annualized rates of change. These annualized rates indicate what the rate of change would be for a 12-month period, if a price change measured for a shorter period continued for a full 12 months.

The answer to question 15 provides information about the areas and size classes for which indexes are published. For areas, we publish less detailed groupings of items than we do for the national level. The following table illustrates this point:

Baltimore, MD	U.S. City Average
All items	All items
Food and beverages	Food and beverages
Food	Food
Food at home	Food at home
Cereals and bakery products	Cereals and bakery products
	Cereals and cereal products
	Flour and prepared flour mixes
	Cereal
	Rice, pasta, and corn meal
	Bakery products
	White bread
	Fresh other bread, biscuits, rolls, and muffins
	Cookies, fresh cakes, and cupcakes
	Other bakery products

Annual average indexes and percent changes for these groupings are published at the national and local levels.

Semiannual average indexes and percent changes for some of these groupings are also published.

Each month, we publish average price data for some food items (for the U.S. and 4 regions) and for some energy items (for the U.S., 4 regions, 4 size-classes, 13 cross-classifications of regions and size-classes, and for 15 metropolitan areas).

(19) What are some limitations of the index?

The CPI is subject to both limitations in application and limitations in measurement.

Limitations of application

The CPI may not be applicable to all population groups. For example, it is designed to measure the experience with average price change of the U.S. urban population and, thus, may not accurately reflect the experience of rural residents. Also, the CPI does not provide data separately for the rate of inflation experienced by subgroups of the population, such as the elderly or the poor.

As noted in the answer to question 17, the CPI cannot be used to measure differences in price levels or living costs between one place and another; it measures only time-to-

time changes in each place. A higher index for one area does not necessarily mean that prices are higher there than in another area with a lower index, it merely means that they have risen faster since their common base period.

The CPI cannot be used as a measure of total change in living costs because changes in these costs are affected by such factors as changes in consumers' market baskets, social and environmental changes, and changes in income taxes, which the CPI does not include.

Limitations in measurement

Limitations in measurement can be grouped into two basic types, sampling errors and nonsampling errors.

Sampling errors. Because the CPI measures price change based on only a sample of items, the published indexes differ somewhat from what the results would be if actual records of all retail purchases by everyone in the index population could be used to compile the index. These estimating or sampling errors are limitations on the precise accuracy of the index, not mistakes in index calculation. The accuracy could be increased by using much larger samples, but the cost would be multiplied. Most of those who have examined the index have found it to be sufficiently accurate for most of the practical uses made of it. The CPI program has developed measurements of sampling error.

Nonsampling errors. These errors occur from a variety of sources. Unlike sampling errors, they can cause persistent bias in the index measurement. They are caused by problems of price data collection, logistical lags in conducting surveys, difficulties in defining basic concepts and their operational implementation, and difficulties in handling the problems of quality change. Nonsampling errors can be far more hazardous to the accuracy of a price index than sampling error, per se. BLS expends much effort to minimize these errors. Highly trained personnel are relied on to insure comparability of quality of items compared from period to period (see answer to question 8.); collection procedures are extensively documented and recurring audits are conducted. The CPI program has started a program of continuous evaluation to identify needed improvements and has introduced improvements as their benefits were proven and as our budget permitted.

(20) Will the CPI be updated or revised in the future?

Yes. The CPI will need revisions as long as there are significant changes in consumer buying habits or shifts in population distribution or demographics. The Bureau, by developing annual Consumer Expenditure Surveys and Point-of-Purchase Surveys, has the flexibility to monitor changing buying habits in a timely and cost-efficient manner. In addition, the censuses conducted by the Department of Commerce provide information that permits us to adapt to shifts in the population distribution and other demographic factors at 10-

year intervals.

As a matter of policy, BLS is continually researching improved statistical methods. Thus, even between major revisions, we are making further improvements to the CPI. For example, changes in children's day care and nursery school expenses, until recently, had been represented by changes in State and local minimum wages. The development of an adequate sample of day care providers and nursery school reporters enabled us to obtain prices for day care and nursery school services directly.

(21) How can I get CPI information?

BLS furnishes CPI data to the public in a variety of methods and formats.

The Electronic News Release. This is the quickest. It is reachable electronically immediately at release time (which is 2-3 weeks after the reference month) through the BLS News Release Service. A fee is charged for this service. Write to the Office of Publications and Special Studies, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 2850 Washington, DC 20212-0001, or call (202) 606-5888.

FAXSTAT—fax-on-demand service. Beginning this fall, the Bureau will have CPI data on a fax-on-demand service available 24-hours a day. FAXSTAT will include the monthly press release, selected regional and metropolitan information, and some technical information. Call (202) 606-6FAX. Each regional office will also have the system in place and will include additional regional CPI information.

Telephone. A wide range of summary CPI data are provided on a 24-hour recorded message, including key CPI numbers plus the next release date. Call (202) 606-STAT. Another recorded message of less than 3 minutes, provides information about the United States and Washington All-items CPIs and the next release date. Call (202) 606-6994. Technical information is available, between 8:15 and 4:45 Eastern time, Monday through Friday, at (202) 606-7000. BLS Regional Offices also provide CPI information by telephone.

Mailgram. This arrives overnight. It is provided through the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22151. It costs \$190 per year in the contiguous United States. It provides selected U.S. City Average CPI data.

Machine-readable form. A single magnetic tape which contains all current and historical CPI data is \$140. Data diskettes are also available. These offer CPI-U and CPI-W indexes for the U.S. city average for 104 selected items, and All-items indexes for 54 selected areas, for all months of the current year and the previous year. A single copy costs \$50 and a 12-month subscription \$357. These arrive about a week after the data are released. For information, write to the Of-

fice of Publications and Special Studies, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 2850, Washington, DC 20212-0001 or call (202) 606-5886. Custom diskettes providing data requested by the user are also available. Call (202) 606-6968.

Free CPI Summary News Release. This 2-page release provides CPI-U and CPI-W indexes, 1-month and 12-month percent changes for 104 selected items for the U.S. city average, a brief analysis of recent CPI movement, and All-items indexes for 36 selected areas and groupings of areas for available periods within the past 3 months, with their latest 12-month percent change. It arrives about 3 weeks after the release of the CPI. You can request that we add your name to this free mailing list by writing to the Office of Publications and Special Studies, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 2850, Washington, DC 20212-0001 or by calling (202) 606-STAT. BLS Regional Offices (see back inside cover) also maintain free mailing lists for local and regional CPI information.

CPI Detailed Report. This is the Bureau's most comprehensive report on consumer prices. See inside front cover for ordering informations.

Monthly Labor Review. The MLR provides selected CPI data included in a monthly summary of BLS data and occasional analytical articles and methodological descriptions too extensive for inclusion in the CPI Detailed Report. It costs \$25 a year, \$7 for a single copy. It can be ordered from: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954.

Historical tables. These show all of the published indexes for each of the detailed CPI components listed in the CPI Detailed Report. They are available upon request. We impose fees for large requests. For information call (202) 606-7000.

Special Publications. Various special publications are available upon request. Examples of these are: Relative Importance of Components in the Consumer Price Index; Using the CPI for Escalation; fact sheets like "Rebasing the Consumer Price Index" and associated conversion factors; and assorted checklists which describe the items eligible for pricing. For information call (202) 606-7000.

(22) Where can I get more information?

Further information may be obtained from any of the eight regional offices of the Bureau of Labor Statistics, (listed on the back inside cover of this publication), or from the Office of Prices and Living Conditions, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE., Room 3615, Washington, DC 20212-0001, or by calling (202) 606-7000.

Table 1. Consumer Price Index for All Urban Consumers (CPI-U): U.S. city average, by expenditure category and commodity and service group

(1982-84=100, unless otherwise noted)

Group	Relative importance, December 1994	Unadjusted indexes		Unadjusted percent change to June 1995 from—		Seasonally adjusted percent change from—		
		May 1995	June 1995	June 1994	May 1995	Mar. to Apr.	Apr. to May	May to June
Expenditure category

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986=100 base.

⁴ In addition, the following metropolitan areas are published semiannually and appear in tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Atlanta, GA; Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder, CO; Honolulu, HI;

Kansas City, MO-KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA.

The following metropolitan areas are published annually and appear in tables 16A and 23A of the January issue of the CPI Detailed Report: New Orleans, LA and Tampa-St. Petersburg-Clearwater, FL.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

¹ Foods, fuels, and several other items priced every month in all areas; most other goods and services priced as indicated:

M - Every month.

1 - January, March, May, July, September, and November.

2 - February, April, June, August, October, and December.

² Regions defined as the four Census regions. See map in technical notes.

³ Indexes on a December 1986=100 base.

⁴ In addition, the following metropolitan areas are published semiannually and appear in tables 34 and 39 of the January and July issues of the CPI Detailed Report: Anchorage, AK; Atlanta, GA; Buffalo-Niagara Falls, NY; Cincinnati-Hamilton, OH-KY-IN; Denver-Boulder, CO; Honolulu, HI;

Kansas City, MO-KS; Milwaukee, WI; Minneapolis-St. Paul, MN-WI; Portland-Vancouver, OR-WA; San Diego, CA; and Seattle-Tacoma, WA.

The following metropolitan areas are published annually and appear in tables 16A and 23A of the January issue of the CPI Detailed Report: New Orleans, LA and Tampa-St. Petersburg-Clearwater, FL.

- Data not available.

NOTE: Local area CPI indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar.

Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

Technical Notes

Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPI's for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 80 percent of the total population and (2), a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers 32 percent of the total population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, medicine, and the other goods that people buy for day-to-day living. Prices are collected in 85 urban areas across the country from about 57,000 housing units and approximately 19,000 retail establishments—department stores, supermarkets, hospitals, gasoline stations and other types of stores and services establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuel, and a few other items are obtained every month in all 85 locations. Prices of most other commodities and services are collected every month in the five largest geographic areas and every other month in other areas. Prices of most goods and services are obtained by either personal visits or telephone calls from the Bureau's trained representatives. Some data, such as used car prices, are obtained from secondary sources.

In calculating the index, price changes for the various items in each location are averaged together with weights which represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Separate indexes are also published by size of city, by region of country, for cross-classifications of regions and population-size classes, and for 29 local areas. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period.

The indexes measure price change from a designated reference date, usually 1982-84, which equals 100.0. An increase of 7 percent, for example, is shown as 107.0. This change can also be expressed in dollars as follows: the price of a base period "market basket" of goods and services in the CPI has risen from \$100 in 1982-84 to \$107.

For further details see *BLS Handbook of Methods*, BLS Bulletin 2414, September 1992.

Calculating Index Changes

Movements of the indexes from one month to another are usually expressed as percent changes rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period while percent changes are not. The example in the accompanying box illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index point change</i>	
CPI	112.5
Less previous index	108.5
Equals index point change	4.0
<i>Percent change</i>	
Index point difference	4.0
Divided by the previous index	108.5
Equals	0.037
Results multiplied by one hundred	0.037×100
Equals percent change	3.7

Energy Prices

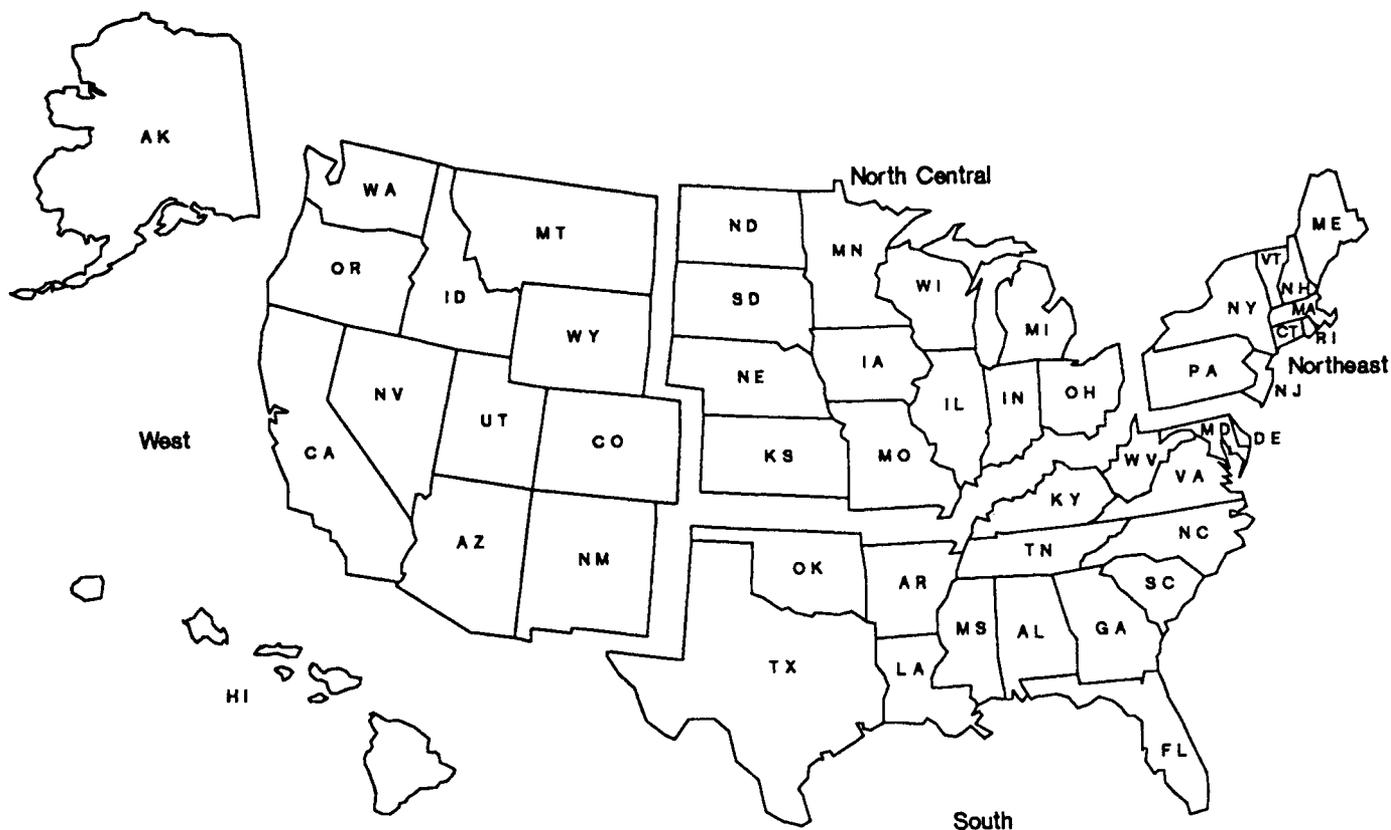

Prices are usually available for the U.S. city average, 15 large metropolitan areas, the four census regions, four size classifications, and 13 areas reflecting the four Census regions cross-classified by the four population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

Natural gas and electricity. Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the Consumer Price Index. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI are not only for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average price per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.*

The average prices for 40 and 100 therms of natural gas for 500 kilowatt hours of electricity (table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Since heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residen-

Census Regions

tial consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised Consumer Price Index.

Fuel oil. Only #2 fuel oil (home heating oil) is priced. Prices are collected, in most cases, for quantities greater than one gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity and/or quick payment.

Gasoline. Gasoline prices are collected at the pump from a sample of full service, mini-service, and self-serve gas stations.

Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTU's (U.S. Department of Energy).

1 kwh = 3,412 BTU'S (Edison Electric Institute).

1 gallon #2 fuel oil = 140,000 BTU'S (U.S. Department of Energy).

Food Prices

In the revised CPI, actual weighted average prices are calculated each month at the national level and for the four Census geographic regions. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot in general be produced. It is hoped however, that regional average prices will help satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, as estimated price will be calculated for the missing item and used in computing the average price. In cases where the proportion of estimated prices used to calculate the average is considered too high, the average price is not published and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. More detailed specifications are available from the BLS regional offices or from the Washington office upon request.

Adjustment of Shelter Indexes for Aging Effects

Beginning with January 1988 CPI, the Bureau of Labor Statistics adjusts the monthly CPI shelter indexes for the

change in quality resulting from the effect of aging on rental housing. In January 1987, the Bureau announced its intention to begin making such adjustments, assuming that further research substantiated the need to do so. The decision to implement the adjustment was based on extensive BLS research, in which alternative adjustment methods were explored and tested. Evaluation of the research indicates that an aging effect exists, and that the chosen method is operationally feasible.¹ The adjustment affect CPI shelter indexes, which would have been raised by 0.2 percent for the year 1987 had an aging adjustment been applied.

The quality of housing unit decreases as the unit ages. Existing BLS methods are used to correct for relatively easily measured quality changes such as the addition of an extra bedroom, but such methods are inadequate to correct for deterioration in the condition of housing unit.²

The aging adjustment method was specifically designed to correct for quality changes associated with this deterioration. The BLS used hedonic regression methods to estimate the aging effect.

The estimates were then used to correct the CPI rent and rental equivalence indexes. Hedonic regressions are statistical functions that relate the price of a good to its attributes or characteristics. For example, a hedonic regression relates a housing unit's rent to its size, age, location, etc. By using BLS housing survey data from 1987 and Census data from 1980, hedonic regression methods provided estimates of the relationship between a housing unit's rent and age while other housing unit characteristics were held constant. The estimated relationship was then used to construct the aging adjustment. Estimates will be recomputed annually by using the previous year's BLS housing survey data and the most recently available Census data.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month. For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year—such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

¹ A complete technical presentation of BLS research on this subject is available in William C. Randolph, "Housing Depreciation and Aging Bias in the Consumer Price Index," BLS Working Paper No. 166, April 1987, and *Journal of Business and Economic Statistics*, Vol. 6, No. 3, July 1988, pp. 359-71 and in William C. Randolph, "Estimation of Housing Depreciation: Short Term Quality Change and Long Term Vintage Effects," BLS Working Paper No. 160, April 1986, and *Journal of Urban Economics*, Vol. 23, March 1988, 162-78. These papers are available from the BLS on request.

² For detail on existing quality adjustment methods, see *BLS Handbook of Methods*, chapter 19 (BLS Bulletin 2414).

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index unadjusted for seasonal variation.

In most cases, seasonal factors used in computing the seasonally adjusted indexes are derived by the X-11-ARIMA Seasonal Adjustment Method. The updated seasonal data at the end of 1977 replaced data from 1967 through 1977. Subsequent annual updates have replaced 5 years of seasonal data, for example, data from 1987 through 1991 were replaced at the end of 1991. The seasonal movement of all items and 47 other aggregations is derived by combining the seasonal movement of 60 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. Occasionally, a component changes its seasonal adjustment status from seasonally adjusted to not seasonally adjusted. When this occurs, not seasonally adjusted data are used for the last 5 years, but before that period the seasonally adjusted indexes remain in calculations of higher-level seasonally adjusted indexes.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called intervention analysis in conjunction with X-11-ARIMA for some CPI series. Intervention analysis allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are removed from the data prior to calculation of seasonal factors in X-11-ARIMA.

For the fuel oil and the motor fuels indexes, this procedure was used to offset the effects that extreme price volatility would otherwise have had on the estimates of seasonally adjusted data for those series. For some women's apparel indexes and the girls' apparel index, the procedure was used to offset the effects of changes in pricing methodology; and for new cars, new trucks, and new vehicles, this procedure was used to offset the effects of changes in marketing strategies and the introduction of new models. For the tobacco and smoking products index, this procedure was used to offset the effects of increases in excise taxes and wholesale tobacco prices. For some alcoholic beverage series, intervention was used to offset the effects of excise tax increases.

An alternative to the intervention-adjusted X-11-ARIMA procedure is the state space model-based seasonal adjustment method. This method adjusts simultaneously for interventions and seasonal effects, rather than sequentially as in the X-11-ARIMA methodology, using structural statistical models with explanatory variables. The state space structural model-based method of seasonal adjustment was introduced in 1992 for the adjustment of January 1991-December 1991 indexes for three women's apparel series: Dresses, separates and sportswear, and suits.

A description of intervention analysis, including a list of

events treated as interventions and the seasonal factors for these items may be obtained by writing the Bureau of Labor Statistics, Division of Consumer Prices and Price Indexes, Room 3615, Washington, DC 20212-0001 or by calling Claire McAnaw at (202) 606-6968.

Metropolitan Areas

BLS publishes five major metropolitan areas monthly:

Chicago-Gary-Lake County, IL-IN-WI
 Los Angeles-Anaheim-Riverside, CA
 New York-Northern NJ-Long Island, NY-NJ-CT
 Philadelphia-Wilmington-Trenton PA-NJ-DE-MD
 San Francisco-Oakland-San Jose, CA

Data for additional 10 metropolitan areas are published every other month [on an odd (January, March, etc.) or even (February, April etc.) month schedule] for the following areas:

Baltimore, MD	-odd
Boston-Lawrence—Salem, MA-NH	-odd
Cleveland-Akron—Lorain, OH	-odd
Dallas-Fort Worth, TX	-even
Detroit-Ann Arbor, MI	-even
Houston, TX	-even
Miami-Fort Lauderdale, FL	-odd
Pittsburgh-Beaver Valley, PA	-even
St. Louis-East St. Louis, MO-IL	-odd
Washington, DC-MD-VA	-odd

(Note: The designation even or odd refers to the month during which the area's price change is measured. Due to the time needed for processing, data are released 2 to 3 weeks in to the following month.)

Data are published for another group of 12 metropolitan areas on a semiannual basis. These indexes, which refer to the arithmetic average for the 6-month periods from January through June and July through December, are published with release of the CPI for July and January, respectively, in August and February for:

Anchorage, AK	Kansas City, MO-KS
Atlanta, GA	Milwaukee, WI
Buffalo-Niagara Falls, NY	Minneapolis-St. Paul MN-WI
Cincinnati-Hamilton, OH-KY-IN	Portland-Vancouver, OR-WA
Denver-Boulder, CO	San Diego, CA
Honolulu, HI	Seattle-Tacoma, WA

Finally, BLS recently began publication of CPI's for two metropolitan areas on an annual basis. These indexes represent the arithmetic averages for the 12-monthly period from January through December of each year. They are published with the release of the CPI for January, i.e., in February. These areas are:

New Orleans, LA
 Tampa-St. Petersburg-Clearwater, FL

CPI on Electronic Bulletin Board

A limited amount of CPI information is currently available via the Department of Labor's electronic bulletin board system (BBS). The data are accessible for downloading free of charge at virtually anytime to any person who has a personal computer with a modem and communications software. The phone number for the BBS is **(202) 219-4784**.

Included on the *Labor News* BBS are all items indexes for the CPI-U and CPI-W for both the U.S. city average and the Washington, D.C. area from 1980 to the present. Also included on the BBS are average prices for the U.S. from 1990 to the present for natural gas, electricity, fuel oil, and gasoline (all types, unleaded regular, and unleaded premium). More indexes or average prices may be added in the future.

The BBS is set to use the most common personal computer parameters. Users should set their communication software to the following:

BAUD RATE:	300-14,400 bps
DATA BITS:	8
STOP BITS:	1

PARITY: NONE
FULL DUPLEX
TERMINAL TYPE: ANSI, VT100, or ANSI-BBS

The *Labor News* BBS is divided into different sections, or "Libraries," with the one containing CPI information being CPIINFO.

Labor News is a menu-driven BBS. Users can select among choices presented on the screen to access the information desired. Typing a "?" will bring up a "Help" screen for on-line assistance. It is also possible to download a users manual for the BBS.

Please note that the BBS shuts down for maintenance every day from 3:00 A.M. to 3:15 A.M. (Eastern time), and Mondays from 7:30 A.M. to 8:00 A.M.

The system operator of the *Labor News* BBS, Don Berry, may be reached at (202) 219-7343. The system operator of the CPI Library, Joe Chelena, may be reached at (202) 606-6982 or via E-mail through the BBS under the name JOEC.
