## To the Members of Congress:

From the time the Joint Committee on the Economic Report was established, its members realized that one of its basic needs was a concise and meaningful picture of current economic trends and developments.

This need could not be met merely by turning to the many statistical reports compiled by the various execurive agencies. Most of these were too detailed or not sufficiently graphic. None was adequate in presenting the salient statistics for the various segments of the economy.

Fortunately, the Joint Committee finds that Economic Indicators, a set of basic charts and tables compiled monthly by the Council of Economic Advisers, admirably fills this need. While this material was prepared primarily for the use of the President, the Council and other officials in the executive offices, the Council has made it available to the Joint Committee.

Other Members of Congress have also expressed an interest in being able to obtain a quick picture of current economic facts without having to wade through voluminous and specialized Government documents. In addition, businessmen, farm leaders, labor organizations and representatives of the press and radio have indicated their desire for this information. Since nothing contrained in these charts and tables is of a confidential nature they have urged that the material be made available to the general public.
Accordingly, the Joint Committee has decided to provide Congress and the public with a limited number of copies of Economic Indicators for May 1948. If the report receives a favorable reaction from the members of Congress it will be continued on a monthly basis.

Any comments or suggestions with respect to possible improvements in this presentation will be appreciated.

Vice-Cbairman
Joint Committee on the Economic Report.

# Letter of Transmittal 

Hon. Robert A. Taft, Cbairman,<br>Joint Committee on the Economic Report, United States Congress, Washington, D. C.

Dear Senator: The Council of Economic Advisers is happy to cooperate with the Joint Committee on the Economic Report in your plans to make Economic Indicators available to the Congress as a whole and to the general public.

In carrying out its mandate under the Employment Act of 1946, the Council has found it desirable to bring together in concise and graphic form the most important facts showing current trends in the Nation's economy. Thus the Executive Office is in a better position to point up the key problems of national economic policy and to promote the improvement and coordination of the Federal Government's widespread statistical services.

We have realized, of course, that this material has a potential usefulness not only to the President, the Council and the executive departments, but also to the Congress. Furthermore, its usefulness to the general public has been impressed upon us, particularly by the representatives of business, labor, agriculture, and consumer organizations with whom we regularly consult.

We believe the Joint Committee will perform a service of real value by giving wide circulation to this material.

Sincerely yours,

Edwin G. Nourse, Chairman.
Leon H. Keyserling, Vice Cbairman.
Johñ D. Clark.

## Section A: THE NATION'S ECONOMIC BUDGET

## THE NATION'S ECONOMIC BUDGET

Preliminary estimates of the Nation's Economic Budget for the first quarter of 1948 indicate that the total increased 6 percent above the level of 1947. Consumers' expenditures increased 6 percent, business outlays 19 percent, while net. exports and government expenditures dropped.

aIllions of dollars

[Billions of dollars]

${ }^{1}$ Adjustments must be made to insure that Nation's Economic Budget total is equal to current production of goods and services. The adjustments eliminate double counting, such as payments to social security beneficiaries and veterans' pensions, which are reflected in government account as well as in consumers' account. For detail, see Appendix A of the President's Economic Reports.

Note.-Detail will not necessarily add to totals because of rounding.

## Section B: PRICES

## CONSUMERS' PRICES

Lower food prices caused consumers' prices to drop slightly in March. Most other items continued to rise.

## WHOLESALE PRICES

Wholesale prices displayed some upward tendency in April, with food prices almost back to the peak levels of early January. Farm prices have recovered about $2 / 5$ of the January - February drop. Other than farm and food prices have continued an upward creep.

[^3]NONAGRICULTURAL EMPLOYMENT
The March increase in employment was reflected fairly evenly in major industry groups.

NONAGRICULTURAL EMPLOYMENT

1 Number of wage and salary workers in nonagricultural establishments includes all full- and part-time wage and salary workers in nonagricultural establishments who worked or received pay during the pay period ending nearest the 15 th of the month. Proprietors, self-employed persons, domestic servants, and personnel of the armed forces are excluded. Not comparable with estimates for nonagricultural employment of the civilian labor force, as reported by Department of Commerce; because latter includes self-employed, proprietors, and domestic servants and are based on population enumeration whereas estimates in this table are based on establishment reports
${ }^{2}$ Preliminary.
Source: Department of Labor.

## AVERAGE WEEKLY HOURS

A shorter workweek in bituminous coal mining in February was attributable primarily to the freight car shortage. The workweek for most other industries changed little. Preliminary data indicate little change in March for manufacturing.

## PER CAPITA INCOME*

An increase in prices during the first quarter more than offset the small increase in per capita income. This resulted in a drop in the real purchasing power of consumers.
