EMPLOYMENT AND EARNINGS

UNITED STATES, 1909-72

Bulletin 1312-9

Based on the 1967 Standard Industrial Classification

U.S. DEPARTMENT OF LABOR
Peter J. Brennan, Secretary

BUREAU OF LABOR STATISTICS
Ben Burdetsky, Deputy Commissioner

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, GPO Bookstores, or BLS Regional Offices listed on inside back cover. Price: $6.40, domestic postpaid or $5.75, over-the-counter.
Make checks payable to Superintendent of Documents.

Microfiche edition available from National Technical Information Service, Springfield, Va. 22151, at 95 cents a set.
Make checks for microfiche payable to NTIS.

Caution

Periodically, the Bureau adjusts the industry employment series to a recent benchmark to improve its accuracy. These adjustments also may affect the hours, earnings, job vacancies, and labor turnover series because employment levels are used as weights. Therefore, all the industry statistics in this book for periods after March 1971, the present benchmark date, are subject to revision. Future editions of the present volume are planned for issue when the series are adjusted to new benchmark levels.

Seasonally adjusted data in this volume for the years 1968 through 1972 do not reflect the most recently derived seasonal factors for those years. Revised data are published in the June 1973 issue of the monthly report, *Employment and Earnings* (Volume 19, Number 12). In most cases any differences will be quite small. These changes are made annually to reflect shifts which may occur in seasonal patterns, but were not available before this bulletin was sent to the printer.

Preface

This volume is the 10th comprehensive data book on national statistics to be released by the Bureau of Labor Statistics since 1961. It replaces *Employment and Earnings, United States, 1909-71* (BLS Bulletin 1312-8), issued in 1972.

Bulletin 1312-9 as did its nine predecessor volumes, presents detailed industry statistics on the Nation's nonagricultural work force. Included are monthly and annual averages on employment covering all employees, women, production workers in manufacturing and mining, construction workers in contract construction, and nonsupervisory workers in the remaining private nonmanufacturing industries. Also shown are average weekly and hourly earnings, average weekly and overtime hours, job vacancies and labor turnover rates. Seasonally adjusted data are presented for a number of these series as well as indexes of aggregate weekly man-hours and payrolls. Tables on spendable average weekly earnings and average hourly earnings, excluding overtime, are also featured.

This edition introduces data on job vacancies. Historical information on job vacancies by selected industries is available from April 1969. Seasonally adjusted data on the number of job vacancies, job vacancy rates, number of long-term vacancies, and long-term job vacancy rates are also being published for the first time.

The Bureau of Labor Statistics has discontinued the collection of labor turnover data by sex. To provide the user with all available historical data, rates for men and women are shown through 1968 for those industries on which data were published regularly. Consistent with publication practices, rates are provided for the first month of each quarter (January, April, July, and October).

The major technical characteristics of the payroll employment statistics program, such as scope, concepts, survey methods, estimating techniques, and limitations highlighted in the next few paragraphs, are described fully in the technical note following the main body of statistical tables.

Benchmark adjustments

Periodically, the BLS adjusts its industry employment series to more recent benchmarks (comprehensive counts of employment) to correct for sampling variability and for changes in industrial activity of establishments. In this volume, data adjusted to March 1971 levels are shown for the first time. It should be noted that data in Bulletin 1312-9 are not necessarily comparable to those published in *Employment and Earnings* before the October 1972 issue, the *Monthly Labor Review* before the November 1972 issue, and in the *Handbook of Labor Statistics,* 1972.

A special article by Margaret Testerman, "BLS Establishment Estimates Revised to March 1971 Benchmark Levels," featured in the October 1972 issue of *Employment and Earnings*, discusses in detail the effect of the latest benchmark adjustments. Reprints of the article are available upon request (as long as the supply lasts) from the BLS in Washington or any of its regional offices, which are listed on the inside back cover of this bulletin.

Levels of employment for March 1959, and 1961-71 for industry categories not regularly published are shown in the back of this book. The data represent the actual count (benchmark) for these industries. For comparative purposes the published industry division totals are also provided in the same table.

Collection of data

Each month a representative panel of industrial, commercial, and government establishments, employing collectively about 30 million workers, voluntarily submits information from payroll records to the State agencies participating in the Current Employment Statistics Program. After extracting data necessary for the preparation of State and area estimates on employment, hours, and earnings, these agencies forward the reports to the BLS (Washington

Digitized for FRASER
http://fraser.stlouisfed.org/
Federal Reserve Bank of St. Louis

Office) for use in the development of national estimates. This program is conducted jointly by State employment security agencies, the Bureau of Labor Statistics, and the Manpower Administration in the District of Columbia and most States; in a few States, the program is a cooperative endeavor by State Departments of Labor and the BLS.

Job openings and labor turnover statistics, by industry, are also based on data voluntarily supplied by employers. The State agency in the Job Openings-Labor Turnover Statistics Program has the same responsibilities as in the Current Employment Statistics Program. In all States and the District of Columbia, the program is operated by the State employment security agencies in cooperation with the Bureau of Labor Statistics and the Manpower Administration.

Standard Industrial Classification

Each industry title in the bulletin is identified by the appropriate SIC code. Industry definitions are based on the Bureau of the Budget's *Standard Industrial Classification Manual, 1967.*

Related State and area statistics

Only national data are presented in this volume. A companion bulletin, *Employment and Earnings, States and Areas, 1939-71* (BLS Bulletin 1370-9), provides similar information for all States, the District of Columbia, and 221 areas. That bulletin contains annual averages for total employment, and weekly earnings, weekly hours, and hourly earnings on the same basis as the national data from the beginning date of each series through 1971. Data for all the industries currently published by each cooperating State agency are presented in the bulletin.

Publication of current data

Beginning with the October 1972 issue, current statistics comparable with the June 1972 figures shown in this book are provided each month in *Employment and Earnings*. (For details on ordering, see the inside front cover of this bulletin.)

This bulletin was prepared by the BLS Division of Industry Employment Statistics, under the direction of Gerald Storch. Data systems were developed under the direction of Alan A. Anderson Jr., of the Office of Federal-State Monthly Surveys.

						1970	4.0	2.8	4.8	2.1	1.8
						1971	3.9	2.5	4.2	1.8	1.6

[a] Quits include miscellaneous separations prior to 1940.

[b] Beginning January 1943, labor turnover rates refer to all employees; previously to production workers only.

[c] Beginning with January 1959, transfers between establishments of the same firm are included in total accessions and total separations; therefore, rates for these items are not strictly comparable with prior data. Transfers comprise part of other accessions and other separations, the rates for which are not shown separately.

NOTE: Data include Alaska and Hawaii beginning 1959. This inclusion has not significantly affected the labor turnover series.

EMPLOYMENT HOURS AND EARNINGS
LABOR TURNOVER BY INDUSTRY

NOTE: All data include Alaska and Hawaii beginning 1959.

For labor turnover rates, beginning with January 1959, transfers between establishments of the same firm are included in total accessions and total separations; therefore, rates for these items are not strictly comparable with prior data. Transfers are included in other accessions and other separations, the rates for which are not shown separately.
