# Preface

This bulletin presents in two volumes historical monthly and annual average data on national establishment-based employment, hours, and earnings by detailed industry classified in accordance with the *1987 Standard Industrial Classification Manual* (SIC). The data are obtained from the Current Employment Statistics (CES) program, a Federal-State cooperative endeavor in which data are collected monthly from the payroll records of a sample of nonfarm business establishments. In March 1993, the sample included over 390,000 establishments employing over 47 million wage and salary workers. The major technical characteristics of the CES program, such as collection, concepts, estimating techniques, and seasonal adjustment methodology, as well as comparisons with other series are described fully in the appendix following the tables.

Effective with the publication of data for May 1994, all establishment-based series on nonfarm payroll employment, hours, and earnings were adjusted to March 1993 benchmarks—comprehensive counts of employment based primarily on unemployment insurance reports filed by employers with State employment security agencies. The incorporation of the new benchmarks affected all unadjusted data from April 1992. Coincident with the benchmark adjustments, all seasonally adjusted series were revised to reflect updated seasonal adjustment factors which incorporate the experience through March 1994. Data for the most recent 5 years are subject to revision.

Additional information on the revisions associated with the new benchmarks appear in "BLS Establishment Estimates Revised to Incorporate March 1993 Benchmarks" in the June 1994 issue of *Employment and Earnings*.

Also effective with the introduction of the March 1993 benchmarks, BLS introduced publication of employment, hours, and earnings data for nine additional industries, completing its 1990's initiative to increase data availability for the service-producing sector. (Data for 55 new service-sector industries were published as part of this initiative.)

In addition, further industry detail for seasonally adjusted all-employee estimates is now available with the publication of nearly all 2-digit SIC level industries within the private sector. For all of the private sector all-employee series, aggregate seasonally adjusted data are the sum of the seasonally adjusted 2-digit SIC component series. Additional detail for seasonally adjusted all-employee estimates with in government are now also available with the breakout of education and non-education components in the State and local government series. Seasonally adjusted State and local government totals are derived by summation of their respective education and non-education components. Seasonally adjusted major division and higher level series, including total nonfarm employment, have been reaggregated back to 1939, resulting in minor revisions to previously published data.

This bulletin comprises all published historical series of national data derived from the establishment survey. It supplants *Employment, Hours, and Earnings, United States, 1909-90*; BLS Bulletin 2370 and *Employment, Hours, and Earnings, United States, 1981-93*; BLS Bulletin 2429. All unadjusted and seasonally adjusted series begin from their respective date of inception and end with February 1994, the last month of final published estimates prior to the benchmark revisions. Most of the data presented in this bulletin are supplemented on a current basis, beginning with the June 1994 issue, by the monthly publication *Employment and Earnings*, available by subscription from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. In addition, published series in the form of magnetic tapes and personal computer diskettes are available to interested data users on a cost-for-service basis. Inquiries concerning the tapes should be addressed to the Automatic Data Processing Support Staff, Bureau of Labor Statistics, 2 Massachusetts Avenue, NE, Room G415, Washington, DC 20212; those concerning diskettes should be addressed to the Division of Monthly Industry Employment Statistics, Room 4860 of the same address.

These data are now also available from the Bureau's public database, LABSTAT, on the INTERNET. INTERNET users should use Anonymous FTP to access BLS data: stats.bls.gov. The revised payroll employment data are in /pub/special.requests/ee directory. A service with more limited access is available by calling (202) 606-7060.

This bulletin was prepared under the direction of Patricia M. Getz, a supervisory economist in the Division of Monthly Industry Employment Statistics, George S. Werking, Chief. Data verification was directed by Mary Lee Seifert, a supervisory

# Introduction

This two-volume bulletin presents historical monthly and annual average data on national establishment-based employment, hours, and earnings by detailed industry based on the 1987 SIC structure. Volume I presents data for the total economy and the goods-producing industries; volume II, the service-producing sector.

Included are monthly and annual average employment for all employees (including government); women employees; production workers in mining and manufacturing; construction workers in construction; and nonsupervisory workers in transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; and services. Also shown for the private nonfarm industries are average weekly hours and average hourly and weekly earnings in current and constant (1982) dollars. Average weekly overtime hours are presented for selected manufacturing series.

Volume II also presents special series for selected industries. These series include indexes of aggregate weekly hours and payrolls related to 1982 as the base year; diffusion indexes of employment change for the total private sector and for manufacturing industries; average hourly earnings, excluding and including lump-sum payments, for selected aerospace industries; and average hourly earnings, excluding overtime, for selected manufacturing industries.

In addition, Volume II presents historical seasonally adjusted series through February 1994 for over 200 of the employment, hours, and earnings series described above.

Appendix A describes the major technical characteristics of the establishment survey, such as collection, concepts, estimating techniques, and seasonal adjustment methods, as well as comparisons with other series. Appendix B provides information on the availability of published series on national establishment-based employment, hours, and earnings.
