

Employment and Earnings

JULY 1954

Women in manufacturing....

The quarterly estimates of the number of women employed in manufacturing industries have been revised to first quarter 1953 benchmarks and are shown in table A-9, page 23. Historical summary tables containing revised data from the earliest available period may be obtained by writing to the BLS Division of Manpower and Employment Statistics.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. Price 30 cents (single copy). Subscription Price: \$3 a year; \$1 additional for foreign mailing. Single copies vary in price.

Employment Trends

NONFARM EMPLOYMENT RISES SLIGHTLY IN JUNE

Nonfarm employment increased 140,000 between May and June to a total of 48.1 million, according to employers' reports to the Labor Department's Bureau of Labor Statistics.

The job expansion occurred in construction, food processing and other seasonal activities. The employment rise was smaller than usually occurs at this time of year because of a further employment loss in durable goods manufacturing. However, the decrease in durable goods employment was concentrated in a few industries and was the smallest since the downturn began last Fall. These developments indicated that the employment downtrend of the past year was almost completely halted in June. Nevertheless, the June 1954 job total was 1.8 million below the all time high for the month reached in 1953. It was, however, above the June level of any other year.

The workweek of factory production workers rose between May and June, in line with seasonal expectations. Since the first of the year, hours of work have been stable, and changes no more than seasonal. This stability in the workweek preceded the improvement in employment by a number of months. Although the 39.6 hour average workweek was the lowest recorded for June in the past five years, hourly earnings of factory production workers were at a new high of \$1.81, including overtime and other premium pay. Weekly earnings averaged \$71.68.

DURABLE GOODS JOB LOSS SMALLEST SINCE LAST FALL

Employment in manufacturing industries remained unchanged between May and June 1954, at 15.8 million, as the usual seasonal expansion in nondurable goods was offset by a drop of 64,000 in durable goods plants. Although the decline in the durable goods sector persisted, it was much less sharp than in previous months. In primary and fabricated metals, where employment losses had previously been large, the latest figures show a halt in the downtrend. Employment in the lumber industry group has been expanding since the beginning of the year, due to heavy demands of the construction industry.

On the other hand, there is little evidence of a slackening in the decline in a number of metalworking industries--ordnance, machinery, electrical machinery, transportation equipment, and instruments--as well as in miscellaneous manufacturing.

Employment in nondurable goods manufacturing gained approximately 60,000 over the month, as usually happens at this time of year. However, apparel lost 14,000 workers as production lagged in

the Fall lines of women's outer wear. Employment in chemicals fell by 5,000 as fertilizer plants contracted seasonally while other segments of the industry failed to make the usual gains. The current over-the-month employment loss continued the series of small declines which have occurred almost steadily in this industry since the beginning of the year.

FACTORY EMPLOYMENT 1 MILLION ABOVE PRE-KOREA LEVEL

The manufacturing employment total of 15.8 million in June 1954 was 1.6 million below June of last year, and, excluding strike-affected June of 1952, was the lowest for the month since 1950. It was, however, more than 1 million above the June 1950 level. Despite the over-the-year losses in several durable goods industries such as electrical machinery, transportation equipment, and instruments, employment in these industries was exceeded only by the record June levels of last year.

Employment in nondurable goods manufacturing was close to the pre-Korea level of June 1950, but the experience of the component industries has varied widely. Printing continued at an alltime peak, while employment in paper, petroleum, and chemicals--despite recent losses in the latter industry--was close to peak levels. On the other hand, long-term declines, coupled with the effects of the recent downtrend, brought employment in textiles and leather to the lowest point for the month in recent years.

Employment in food and tobacco showed little expansion after the outbreak of Korean hostilities and little contraction during the recent downturn, so that the level of employment in these industries in June 1954 was close to that of earlier years. On the other hand, apparel, which expanded employment after June 1950, lost over 120,000 workers since last June and as a result was at its lowest point for the month since 1949.

NONMANUFACTURING EMPLOYMENT RISES OVER THE MONTH

Employment in the nonmanufacturing sector generally showed seasonal gains between May and June. Contract construction continued to expand, adding more than 100,000 workers over the month. This brought the number of workers on contractors' payrolls to 2.7 million, slightly above the level of last June, and equal to the 1952 peak for the month.

Both transportation and mining added workers to their payrolls between May and June, contrasting with the declines of previous months. These gains were about the same as those usually occurring at this time of year. Nevertheless, employment in mining, at 740,000, was 100,000 below the June figure of last year, while June transportation em-

ployment of 4.0 million was 220,000 below the corresponding 1953 level.

Approximately 10.4 million workers were employed in wholesale and retail trade establishments in June 1954. This was 76,000 workers below the June 1953 level, and contrasted with the uptrend in trade employment almost without exception in recent years.

Employment in service and finance rose between May and June to new peaks for the month. These industries have been consistently strong throughout the downturn of the past year.

The total number of government workers in June was almost 90,000 lower than in May. Nevertheless, the number of government workers was at an alltime peak for the month as continued expansion in State and local government activities outweighed the decline in Federal government employment.

FACTORY WORKWEEK LENGTHENED IN JUNE

The workweek of factory production workers averaged 39.6 hours in June, a third of an hour higher than in May. In most industries, changes in weekly hours were in line with seasonal expectations. In primary metals and furniture, however, the May-to-June gains in hours were the largest recorded for the month in the postwar period.

Despite the recent gains in hours of work, the June average of 39.6 was 1.1 hours below that of June 1953. All manufacturing industry groups except tobacco, petroleum, and chemicals showed some over-the-year loss in weekly hours. The reductions in the rubber, food, printing, transportation equipment, and paper industries were less than one hour. Losses of an hour and a half or more were recorded in primary metals, machinery, textiles, instruments, ordnance, and leather.

FACTORY WORKERS' EARNINGS ROSE IN JUNE

Factory workers average weekly earnings increased 94 cents between May and June to \$71.68. This was the largest over-the-month increase in weekly earnings since December of 1952. As a result, the average weekly pay of factory production workers this June was only 36 cents under last year's postwar peak for the month.

Most industries reported some over-the-month gains in weekly pay. The largest--over \$3.00--was recorded in the rubber industry, while in the primary metals, furniture, and leather industries,

gains of over \$1.50 were reported. On the other hand, declines in weekly earnings, a result of a shortened workweek, were experienced by workers in the transportation equipment, ordnance, machinery, and stone, clay, and glass industries.

Gross hourly earnings of factory workers, including overtime and other premium pay, averaged \$1.81 in June, about the same as in May and 4 cents higher than a year earlier. Over-the-year gains in hourly pay were shown in every manufacturing industry except textiles, where hourly pay was unchanged. The increase in nondurable goods industries--7 cents--was slightly larger than that of 4 cents experienced in the durable goods group. The gap in earnings between the durable and nondurable goods sector remained relatively large, however. In durable goods hourly earnings were \$1.91 in June, as against \$1.67 in nondurables.

FACTORY HIRINGS ROSE AND LAYOFFS DECLINED IN MAY

Presaging the improving employment situation, the layoff rate in manufacturing plants declined from an average of 24 per 1000 employees in April to 21 in May, while hiring picked up slightly more than usual.

Nevertheless, the layoff rate in May continued to be well above the average for the month in other recent years and the factory hiring rate was at a low for the season.

In the past few months, fluctuations in the layoff rate have been small, contrasting with the steady rise in layoffs in the latter half of 1953. The factory hiring rate has also changed very little from month to month since the beginning of 1954.

The factory hiring rate increased by 3 per 1000 employees to 27 per 1000 in May. While hiring usually picks up in May, the rise this year was slightly more than usual, especially in some durable goods industries.

The total separation rate from factory payrolls--including quits, discharges, layoffs, military and other separations--was 35 per 1000 in May, 3 per 1000 less than in the previous month. Total separations exceeded total accessions by 8 per 1000 employees in May, the largest margin for the month since 1949.

The rate at which factory workers were quitting their jobs was 10 per 1000 in May, virtually the same as last month. At this level, the quit rate was the lowest for the month in the postwar period and reflected the reduced availability of alternative job opportunities.

* Does not conform with definition used for national series as shown in Glossary.

1/ Includes mining.

2/ Not available.

3/ Revised series; not strictly comparable with previously published data.

4/ Includes mining and finance.

5/ Subarea of New York-Northeastern New Jersey.

6/ Includes mining and government.

Hours and Earnings

**Table C-1: Hours and gross earnings of production workers
or nonsupervisory employees - Continued**

Industry group and industry	Average weekly earnings			Average weekly hours			Average hourly earnings		
	May 1954	Apr. 1954	May 1953	May 1954	Apr. 1954	May 1953	May 1954	Apr. 1954	May 1953
TRANSPORTATION AND PUBLIC UTILITIES:									
TRANSPORTATION:									
Class I railroads.....	(1/)	\$78.50	\$74.43	(1/)	41.1	39.8	(1/)	\$1.91	\$1.87
Local railways and bus lines.....	\$77.58	77.58	78.08	43.1	43.1	46.2	\$1.80	1.80	1.69
COMMUNICATION:									
Telephone.....	67.55	66.09	64.63	38.6	38.2	38.7	1.75	1.73	1.67
Switchboard operating employees 2/...	56.98	54.09	54.68	37.0	36.3	37.2	1.54	1.49	1.47
Line construction, installation, and maintenance employees 3/.....	93.88	93.46	90.95	42.1	42.1	42.5	2.23	2.22	2.14
Telegraph 4/.....	75.78	75.78	75.90	42.1	42.1	42.4	1.80	1.80	1.79
OTHER PUBLIC UTILITIES:									
Gas and electric utilities.....	81.59	80.77	79.52	41.0	41.0	41.2	1.99	1.97	1.93
WHOLESALE AND RETAIL TRADE:									
WHOLESALE TRADE.....	74.12	73.16	70.93	40.5	40.2	40.3	1.83	1.82	1.76
RETAIL TRADE (EXCEPT EATING AND DRINKING PLACES).....	56.41	55.91	54.21	38.9	39.1	39.0	1.45	1.43	1.39
General merchandise stores.....	40.48	39.76	38.52	34.9	35.5	34.7	1.16	1.12	1.11
Department stores and general mail-order houses.....	46.31	45.74	44.38	35.9	36.3	35.5	1.29	1.26	1.25
Food and liquor stores.....	59.50	59.75	58.05	37.9	38.3	38.7	1.57	1.56	1.50
Automotive and accessories dealers.....	75.92	74.76	74.70	44.4	44.5	45.0	1.71	1.68	1.66
Apparel and accessories stores.....	45.50	46.37	44.58	35.0	35.4	35.1	1.30	1.31	1.27
Other retail trade:									
Furniture and appliance stores.....	62.73	62.31	61.03	42.1	42.1	41.8	1.49	1.48	1.46
Lumber and hardware supply stores.....	66.96	66.22	64.37	43.2	43.0	43.2	1.55	1.54	1.49
FINANCE, INSURANCE, AND REAL ESTATE:									
Banks and trust companies.....	56.81	56.76	54.65	(1/)	(1/)	(1/)	(1/)	(1/)	(1/)
Security dealers and exchanges.....	89.53	92.09	84.48	(1/)	(1/)	(1/)	(1/)	(1/)	(1/)
Insurance carriers.....	69.34	68.99	66.52	(1/)	(1/)	(1/)	(1/)	(1/)	(1/)
SERVICE AND MISCELLANEOUS:									
Hotels and lodging places:									
Hotels, year-round 5/.....	40.03	39.62	37.89	41.7	41.7	42.1	.96	.95	.90
Personal services:									
Laundries.....	40.30	40.80	40.67	40.3	40.4	41.5	1.00	1.01	.98
Cleaning and dyeing plants.....	47.20	50.40	48.19	40.0	42.0	41.9	1.18	1.20	1.15
Motion pictures:									
Motion-picture production and distribution.....	97.22	92.25	84.60	(1/)	(1/)	(1/)	(1/)	(1/)	(1/)

1/ Not available.

2/ Data relate to employees in such occupations in the telephone industry as switchboard operators; service assistants; operating room instructors; and pay-station attendants. During 1953 such employees made up 45 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

3/ Data relate to employees in such occupations in the telephone industry as central office craftsmen; installation and exchange repair craftsmen; line, cable, and conduit craftsmen; and laborers. During 1953 such employees made up 24 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

4/ Data relate to domestic employees except messengers and those compensated entirely on a commission basis.

5/ Money payments only; additional value of board, room, uniforms, and tips, not included.

* NOTE: RAILROAD AND STREET CARS - January 1954 data for average hourly earnings revised to \$2.08.

Explanatory Notes

INTRODUCTION

The statistics for nonfarm industries presented in this monthly report are part of the broad program of the Bureau of Labor Statistics to provide timely, comprehensive, accurate, and detailed information for the use of businessmen, government officials, legislators, labor unions, research workers, and the general public, and are an integral part of the Federal statistical system. Current statistics on employment, labor turnover, hours, and earnings are basic indicators of economic change. They are widely used in following business developments and in making decisions in such fields as marketing, personnel, plant location, and government policy. The BLS employment statistics program also provides data used in making official indexes of production, productivity, and national income.

The Bureau publishes monthly statistics on employment and hours and earnings for the Nation, for all States and for selected metropolitan areas. For employment, the total of employees in nonagricultural establishments is shown; for hours and earnings, data are available for production workers in manufacturing and selected groups in nonmanufacturing industries. Within these broad activities data are published in varying industry detail. Labor turnover rates are presented for both total manufacturing and component groups, as well as for selected mining and communications industries.

Statistics on the number and proportion of women employees in manufacturing industries and turnover rates for men and women separately are published quarterly. In addition, earnings adjusted for price changes, Federal taxes, and overtime for selected industries appear monthly, as well as indexes of production-worker aggregate weekly man-hours for major manufacturing groups.

These data are reprinted regularly in the Monthly Labor Review. Each of the series, from the earliest period to date, may be obtained by writing to the BLS Division of Manpower and Employment Statistics. Such requests should specify the industry series desired.

More detailed descriptions of these series are available through reprints of Technical Notes which may be obtained upon request:

- "Technical Note on the Measurement of Industrial Employment"
- "Technical Note on Measurement of Labor Turnover"
- "Technical Note on Hours and Earnings in Non-agricultural Industries"

Section A - EMPLOYMENT

Definition of Employment

BLS employment statistics represent the total number of full- and part-time nonagricultural workers on establishment payrolls during a specified period each month.

Persons on an establishment payroll who are on paid sick-leave, paid holiday, or paid vacation, or who work during a part of the specified pay period and are unemployed or on strike during the other part of the period are counted as employed. Persons are not considered employed who are laid off or are on leave without pay, who are on strike for the entire period, or who are hired but do not report to work during the period. Proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households are also excluded. Government employment covers only civilian employees.

Employment data for nongovernmental establishments refer to persons who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. Current data for Federal Government establishments generally refer to persons who worked on, or received pay for, the last day of the month; for State and local government, persons who received pay for any part of the pay period ending on, or immediately prior to, the last day of the month.

Beginning with January 1952, the data for Federal employment are not strictly comparable with those for prior years, primarily as a result of changes in definition. For the national series and except for a few States and areas as noted the following changes were made starting with that month: (1) data refer to the last day of the month rather than the first of the month; (2) employment of the Federal Reserve Banks and of the mixed ownership banks of the Farm Credit Administration was transferred from the Federal total to the "Banks and Trust Companies" group of the "Finance, Insurance, and Real Estate" division; (3) fourth-class postmasters, formerly included only in the table showing Federal civilian employment, are now included in all tables showing government series.

Collection of Establishment Reports

The employment program is based on establishment payroll reports. An establishment is defined as a single physical location, such as a factory, mine, or store where business is conducted. In the case of a company with several plants or establishments, the BLS endeavors to obtain separate reports from each business unit which maintains separate payroll records, since each may be classified in a different industry.

The BLS, with the cooperation of State agencies, collects current employment, payroll, and man-hour information by means of "shuttle" schedules (BLS 790 Forms) mailed monthly to individual establishments. This shuttle schedule, which has been used by BLS for more than 20 years, is designed to assist firms to report consistently, accurately, and with a minimum of cost. State agencies mail the forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the information to prepare State and area series and then send the schedules to the BLS Division of Manpower and Employment Statistics for use in preparing the national series. Each questionnaire provides a line for the State agency to enter data for December of the previous year, as well as lines for the cooperating establishments to report for each month of the current calendar year. The December data, copied from the completed previous year's form, give the reporter a means for comparison when reporting for January as an aid to collection of consistent data. The same form

is returned each month to the reporting establishment to be completed. Definitions of terms are described in detail in the instructions on each form.

Coverage of Establishment Reports

The Bureau of Labor Statistics obtains monthly reports from approximately 155,000 establishments, distributed by industry as shown by the following table. The table also shows the approximate proportion of total employment in each industry division covered by the group of establishments furnishing monthly employment data. The coverage for individual industries within the divisions may vary from the proportions shown.

Approximate size and coverage of monthly sample used in BLS employment and payroll statistics 1/

Division or industry	Number of establish- ments in sample	Employees	
		Number in sample	Percent of total
Mining.....	3,300	440,000	50
Contract construction...	19,700	783,000	28
Manufacturing.....	44,100	11,207,000	68
Transportation and public utilities:			
Interstate railroads (ICC).....	---	1,357,000	96
Other transportation and public utilities (BLS).....	13,600	1,430,000	51
Wholesale and retail trade.....	60,300	1,889,000	19
Finance, insurance, and real estate.....	10,600	486,000	25
Service and miscellaneous:			
Hotels and lodging places.....	1,300	145,000	31
Personal services:			
Laundries and cleaning and dyeing plants.....	2,300	99,000	19
Government:			
Federal (Civil Service Commission).....	---	2,368,000	100
State and local (Bureau of the Census).....	---	2,760,000	67

1/ Some firms do not report payroll and man-hour information. Therefore, hours and earnings estimates are based on a slightly smaller sample than employment estimates.

Classification of Establishment Reports

To present meaningful tabulations of employment, hours, earnings, and labor turnover data, establishments are classified into industries on the basis of the principal product or activity determined from information on annual sales volume. This information is collected annually on a product supplement to the monthly report. The supplement provides for reporting the percentage of total sales represented by each product. In the case of an establishment making more than one product, the entire employment of the plant is included under the industry indicated by the most important product. The titles and descriptions of industries presented in the 1945 Standard Industrial Classification Manual, Vol. I (U. S. Bureau of the Budget, Washington, D. C.) are used for classifying reports from manufacturing establishments; the 1942

Industrial Classification Code, (U. S. Social Security Board), for reports from nonmanufacturing establishments.

Benchmark Data

Experience with employment statistics has shown that without adjustment to new benchmarks, the employment estimate tends toward understatement which becomes larger as the distance from the earlier benchmark increases. To adjust for this, the estimates must be periodically compared with actual counts of employment in the various nonagricultural industries, and appropriate revisions made as indicated by the total counts or benchmarks.

Basic sources of benchmark information are quarterly tabulations of employment data, by industry, compiled by State agencies from reports of establishments covered under State unemployment insurance laws. Supplementary tabulations prepared by the U. S. Bureau of Old Age and Survivors Insurance are used for the group of establishments exempt from State unemployment insurance laws because of their small size. For industries not covered by either of the two programs, benchmarks are compiled from special establishment censuses: for example, for interstate railroads, from establishment data reported to the ICC; for State and local government, from data reported to the Bureau of the Census; for the Federal Government, from agency data compiled by the Civil Service Commission. Establishments are classified into the same industrial groupings for benchmark purposes as they are for monthly reporting.

At the time new benchmark data become available, the BLS estimates which had been prepared for the benchmark quarter are compared with the levels of the benchmarks, industry by industry. Where revisions are necessary, the levels are adjusted between the new benchmark and the last previous one. Following revision for these intermediate periods, the industry data from the most recent benchmark are projected to the current month by application of the sample trends used prior to the revision. The benchmark establishes the level, while the sample determines the trend.

Estimating Method

The estimating procedure for industries for which data on both "all employees" and "production and related workers" are published (i. e., manufacturing and selected mining industries) is outlined below; the first step of this method is also used for industries for which only figures on "all employees" are published.

The first step is to compute total employment (all employees) in the industry for the month following the benchmark period. The all-employee total for the last benchmark month (e.g., March) is multiplied by the percent change of total employment over the month for a group of establishments reporting for both March and April. Thus, if firms in the BLS sample for an industry report 30,000 employees in March and 31,200 in April, April employment is 104 percent (31,200 divided by 30,000) of March employment. If the all-employee benchmark in March is 40,000, the all-employee total in April would be 104 percent of 40,000 or 41,600.

The second step is to compute the production-worker total for the industry. The all-employee total for the month is multiplied by the ratio of production workers to all employees. This ratio is computed from those establishment reports which show data for both items. Thus, if these firms in April report 24,400

production workers and a total of 30,500 employees, the ratio of production workers to all employees would be .80 (24,400 divided by 30,500). The production-worker total in April would be 33,280 (41,600 multiplied by .80).

Figures for subsequent months are computed by carrying forward the totals for the previous month according to the method described above.

Comparability With Other Employment Estimates

Data published by other government and private agencies differ from BLS employment statistics because of differences in definition, sources of information, methods of collection, classification, and estimation. BLS monthly figures are not directly comparable, for example, with the estimates of the Bureau of the Census Monthly Report on the Labor Force (MRLF). Census data are obtained by personal interviews with individual members of a small sample of households and are designed to provide information on the work status of the whole population, classified by their demographic characteristics. The BLS, on the other hand, obtains data by mail questionnaire which are based on the payroll records of business units, and prepares detailed statistics on the industrial and geographic distribution of employment and on hours of work and earnings.

Since BLS employment figures are based on establishment payroll records, persons who worked in more than one establishment during the reporting period will be counted more than once in the BLS series. By definition, proprietors, self-employed persons, domestic servants, and unpaid family workers are excluded from

the BLS but not the MRLF series. The two series also differ in date of reference, BLS collecting data for the pay period ending nearest the 15th of the month (except for government), while the MRLF relates to the calendar week containing the 8th day of the month.

Employment estimates derived by the Bureau of the Census from its censuses and/or annual sample surveys of manufacturing establishments also differ from BLS employment statistics. Among the important reasons for lack of comparability are differences in industries covered, in the business units considered parts of an establishment, and in the industrial classification of establishments.

Employment Statistics for States and Areas

State and area employment statistics are collected and prepared by State agencies in cooperation with the Bureau of Labor Statistics. These statistics are based on the same reports used for preparing national estimates. State series are adjusted to benchmark data from State unemployment insurance agencies and the Bureau of Old Age and Survivors Insurance. Because some States have more recent benchmarks than others and use slightly varying methods of computation, the sum of the State figures may differ slightly from the official U. S. totals prepared by the Bureau of Labor Statistics. State and area data in greater industry detail and for earlier periods may be secured directly upon request to the appropriate State agency or to the Bureau of Labor Statistics. The names and addresses of these agencies are listed on the inside back cover of this report.

-EMPLOYMENT- SUMMARY OF METHODS OF COMPUTATION

Item	Individual manufacturing and nonmanufacturing industries	Total nonagricultural, divisions, major groups and groups
MONTHLY DATA		
<u>All employees</u>	All-employee estimate for previous month multiplied by ratio of all employees in current month to all employees in previous month for sample establishments which reported for both months.	Sum of all-employee estimates for component industries.
<u>Production workers</u> (for mining and manufacturing)	All-employee estimate for current month multiplied by ratio of production workers to all employees in sample establishments for current month.	Sum of production-worker estimates for component industries.
ANNUAL DATA		
<u>All employees and production workers</u>	Sum of monthly estimates divided by 12.	Sum of monthly estimates divided by 12.

Section B - LABOR TURNOVER

Definition of Labor Turnover

"Labor turnover," as used in this series, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms. This movement is subdivided into two broad types: accessions (new hires and rehires) and separations (terminations of employment initiated by either the employer or the employee). Each type of action is cumulated for a calendar month and expressed as a rate per 100 employees. Rates of accession and separation are shown separately.

All employees, including executive, office, sales, and other salaried personnel as well as production workers are covered by both the turnover movements and the employment base used in computing labor turnover rates. All groups of employees - full- and part-time, permanent and temporary - are included. Transfers from one establishment to another within a company are not considered to be turnover items.

The terms used in labor turnover statistics are defined in the glossary under "Labor Turnover."

Source of Data and Sample Coverage

Labor turnover data are obtained each month from a sample of establishments by means of a mail questionnaire. Schedules are received from approximately 7,100 cooperating establishments in the manufacturing, mining, and communication industries (see below). The definition of manufacturing used in the turnover series is more restricted than in the BLS series on employment and hours and earnings because of the exclusion of certain manufacturing industries from the labor turnover sample. The major industries excluded are: printing, publishing, and allied industries (since April 1943); canning and preserving fruits, vegetables and sea foods; women's and misses' outerwear; and fertilizer.

Approximate coverage of BLS labor turnover sample

Group and industry	Number of establishments in sample	Employees	
		Number in sample	Percent of total
Manufacturing.....	6,600	4,800,000	34
Durable goods.....	4,000	3,400,000	38
Nondurable goods..	2,600	1,400,000	27
Metal mining.....	130	63,000	60
Coal mining:			
Anthracite.....	40	30,000	45
Bituminous.....	275	120,000	33
Communication:			
Telephone.....	(1/)	582,000	89
Telegraph.....	(1/)	28,000	60

1/ Data are not available

Method of Computation

To compute turnover rates for individual industries, the total number of each type of action (accessions, quits, etc.) reported for a calendar month by the sample establishments in each industry is first divided by the total number of employees (both wage

and salary workers), reported by these establishments, who worked during, or received pay for, any part of the pay period ending nearest the 15th of that month. The result is multiplied by 100 to obtain the turnover rate.

For example, in an industry sample, the total number of employees who worked during, or received pay for, the week of January 12-18 was reported as 25,498. During the period January 1-31 a total of 284 employees in all reporting firms quit. The quit rate for the industry is:

$$\frac{284}{25,498} \times 100 = 1.1$$

To compute turnover rates for industry groups, the rates for the component industries are weighted by the estimated employment. Rates for the durable and non-durable goods subdivisions and manufacturing division are computed by weighting the rates of major industry groups by the estimated employment.

Classification of Establishment Reports

Beginning with data for January 1950, manufacturing establishments reporting labor turnover are classified in accordance with the Standard Industrial Classification (1945) code structure. Definitions of nonmanufacturing industries are based on the Social Security Board Classification Code (1942).

For additional details, see Section A-Employment.

Comparability With Earlier Data

Labor turnover rates are available on a comparable basis from January 1930 for manufacturing as a whole and from 1943 for two coal mining and two communication industries. Labor turnover rates for many individual industries and industry groups for the period prior to January 1950 are not comparable with the rates for the subsequent period because of a revision which involved (1) the adoption of the Standard Industrial Classification (1945) code structure for manufacturing industries, and (2) the introduction of weighting in the computation of industry-group rates.

Comparability With Employment Series

Month-to-month changes in total employment in manufacturing industries reflected by labor turnover rates are not comparable with the changes shown in the Bureau's employment series for the following reasons:

- (1) Accessions and separations are computed for the entire calendar-month; the employment reports, for the most part, refer to a 1-week pay period ending nearest the 15th of the month.
- (2) The turnover sample is not as large as the employment sample and includes proportionately fewer small plants; certain industries are not covered (see paragraph on source of data and sample coverage).
- (3) Plants are not included in the turnover computations in months when work stoppages are in progress; the influence of such stoppages is reflected, however, in the employment figures.

Section C - HOURS AND EARNINGS

Production- and Nonsupervisory-Worker Employment, Payroll, and Man-Hours

The monthly employment and payroll schedule provides the following information required to compute averages of hours and earnings:

(1) The number of full- and part-time production workers or nonsupervisory employees who worked during, or received pay for, any part of the pay period reported. Data cover production and related workers in manufacturing, mining, laundries, and cleaning and dyeing plants. Employees covered in the contract construction industries are those engaged in actual construction work. For the remaining industries, unless otherwise noted, data refer to all nonsupervisory employees and working supervisors. (See glossary.)

(2) Total gross payrolls for such workers before deductions for old-age and unemployment insurance, withholding tax, bonds, union dues, and special clothing allowances. The payroll figures also include pay for sick leave, holidays, and vacations taken. Excluded are: cash payments for vacations not taken; retroactive pay not earned during the period reported; value of payments in kind; contributions to welfare funds, and insurance or pension plans; and commissions and bonuses, unless earned and paid regularly each pay period.

(3) Total man-hours, whether worked or paid for, of full- and part-time production or nonsupervisory workers including hours paid for holidays, sick leave, and vacations taken. If employees elect to work during a vacation period, only actual hours worked by such employees are included.

The period reported generally represents the weekly pay period ending nearest the 15th of the month. Some establishments, however, use a 2-week or longer pay period. Such schedules are edited to reduce the payroll and man-hour aggregates to their proper equivalents for a weekly period.

Collection of Establishment Reports

See Section A-Employment.

Coverage of Establishment Reports

See Section A-Employment.

Classification of Establishment Reports

See Section A-Employment.

Description of Gross Average Hourly and Weekly Earnings Series

The average hourly earnings information for manufacturing and nonmanufacturing industries are on a "gross" basis; i.e., they reflect not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late shift work, and changes in output of workers paid on an incentive basis. Employment shifts between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also

affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings should not be confused with wage rates. Earnings refer to the actual return to the worker for a stated period of time; rates are the amounts stipulated for a given unit of work or time. However, the average earnings series should not be interpreted as representing total labor costs on the part of the employer, since the following are excluded: irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production-worker or nonsupervisory-employee definitions.

In addition to the factors mentioned, which exert varying influences upon gross average hourly earnings, gross average weekly earnings are affected by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism. Gross weekly earnings are not the amount actually available to workers for spending because no deduction has been made for income and social security taxes, group insurance, occupational supplies, and union dues. For weekly earnings after deduction for Federal taxes see table C-3. For approximations of "real" gross weekly earnings, i.e., after adjustment for price changes, see table C-2.

Average Weekly Hours

The workweek information relates to average hours worked or paid for, and is somewhat different from standard or scheduled hours. Normally, such factors as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than the hours of workers who are on the payroll during the whole workweek. Group averages further reflect changes in the workweek of component industries.

Gross Average Weekly Earnings in Current and 1947-49 Dollars

Table C-2 shows gross average weekly earnings in both current and 1947-49 dollars for selected industries. These series indicate changes in the level of weekly earnings before and after adjustment for changes in purchasing power as determined from the Bureau's Consumer Price Index. The 3-year average—1947, 1948, and 1949—was selected as the base in conformity with the Bureau of the Budget recommendations that Federal statistics have a common 1947-49 base period.

Net Spendable Average Weekly Earnings

Net spendable average weekly earnings are obtained by deducting appropriate amounts for social security and Federal income taxes from gross weekly earnings. The amount of income tax liability depends on the number of dependents supported by the worker, as well as on the level of his gross income. To reflect these variables, net spendable earnings have been computed for two types of income-receivers: (1) a worker with no dependents; (2) a worker with three dependents.

The computations of net spendable earnings for both the factory worker with no dependents and the factory worker with three dependents are based upon the gross average weekly earnings for all production workers in manufacturing industries without regard to marital status, family composition, and total family

income. The spendable series measures relative changes in the average disposable earnings for two types of income-receivers.

Net spendable weekly earnings in 1947-49 dollars represent an approximate measure of changes in "real" net spendable weekly earnings as indicated by the changes in the Bureau's Consumer Price Index. "Real" net spendable weekly earnings are computed by applying the current CPI to the spendable earnings average for the current month. The resulting level of spendable earnings expressed in 1947-49 dollars is thus adjusted for changes in purchasing power since that base period.

A detailed technical note on net spendable weekly earnings may be obtained upon request.

Average Hourly Earnings, Excluding Overtime, of Production Workers in Manufacturing Industries

The Bureau publishes average hourly earnings exclusive of overtime premium payments for manufacturing as a whole and the durable- and nondurable-goods subdivisions. These data are based on the application of adjustment factors to gross average hourly earnings (as described in the *Monthly Labor Review*, May 1950, pp. 537-540; reprint available, Serial No. R, 2020). This method eliminates only the additional earnings due to overtime paid for at one and one-half times the straight-time rates after 40 hours a week. Thus, no adjustment is made for other premium payment provisions—for example, holiday work, late shift work, and penalty rates other than time and one-half.

The set of adjustment factors can be used to eliminate premium overtime payments from average hourly earnings in any manufacturing industry where overtime for individual workers consists typically of hours in excess of 40 per week paid for at the rate of time and one-half. As these factors yield results which are only approximate, they may not be appropriate when exact figures are required.

Indexes of Production-Worker Aggregate Weekly Man-Hours

The indexes of production-worker aggregate weekly man-hours are prepared by dividing the current month's aggregate by the monthly average for the 1947-49

period. These aggregates represent the product of average weekly hours and production-worker employment.

The aggregate man-hours are defined as total man-hours for which pay was received by full- and part-time production workers, including hours paid for holidays, sick leave, and vacations taken. The man-hours are for 1 week of the pay period ending nearest the 15th of the month, and may not be typical of the entire month. Aggregate man-hours differ from scheduled man-hours due to such factors as absenteeism, labor turnover, part-time work, and stoppages.

Railroad Hours and Earnings

The figures for Class I railroads (excluding switching and terminal companies) are based upon monthly data summarized in the M-300 report of the Interstate Commerce Commission and relate to all employees who received pay during the month, except executives, officials, and staff assistants (ICC Group I). Gross average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, reduced to a weekly basis, by the number of employees, as defined above. Gross average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Because hours and earnings data for manufacturing and other nonmanufacturing industries are based upon reports to the Bureau of Labor Statistics which generally represent 1 weekly pay period ending nearest the 15th of the month, the data for railroad employees are not strictly comparable with other industry information shown in this publication.

Hours and Gross Earnings for Selected States and Areas

The State and area hours and earnings data for manufacturing are prepared by cooperating State agencies. These estimates are based on the same reports used in preparing national estimates. Inasmuch as the estimates presented in this report relate only to manufacturing as a whole, variations in earnings among the States and areas are, to a large degree, caused by differences in industrial composition. For additional details on State and area statistics see Section A-Employment.

**-HOURS AND EARNINGS-
SUMMARY OF METHODS OF COMPUTATION**

Item	Individual manufacturing and nonmanufacturing industries	Manufacturing division, groups, subgroups, and nonmanufacturing groups
MONTHLY DATA		
<u>Average weekly hours</u>	Total production or nonsupervisory man-hours divided by number of production or nonsupervisory workers.	Average, weighted by employment, of the average weekly hours for component industries.
<u>Average hourly earnings (in dollars)</u>	Total production or nonsupervisory worker payroll divided by total production or nonsupervisory worker man-hours.	Average, weighted by aggregate man-hours, of the average hourly earnings for component industries.
<u>Average weekly earnings (in dollars)</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.
ANNUAL DATA		
<u>Average weekly hours</u>	Annual total of aggregate man-hours (employment multiplied by average weekly hours) divided by annual sum of employment.	Average, weighted by employment, of the annual averages of weekly hours for component industries.
<u>Average hourly earnings (in dollars)</u>	Annual total of aggregate payrolls (weekly earnings multiplied by employment) divided by annual aggregate man-hours.	Average, weighted by aggregate man-hours, of the annual averages of hourly earnings for component industries.
<u>Average weekly earnings (in dollars)</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.

Section D - GLOSSARY

ALL EMPLOYEES - Includes production and related workers as defined below and workers engaged in the following activities: executive, purchasing, finance, accounting, legal, personnel (including cafeterias, medical, etc.), professional and technical activities, sales, sales-delivery, advertising, credit collection, and installation and servicing of own products, routine office functions, factory supervision (above the working foreman level). Also includes employees on the establishment payroll engaged in new construction

and major additions or alterations to the plant who are utilized as a separate work force (force-account construction workers). Proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces are excluded.

CONSTRUCTION WORKERS - Includes working foremen, journeymen, mechanics, apprentices, helpers, laborers, and similar workers, engaged in new work, alterations, demolition, and other actual construction work, at the site of construction or working in shop or yard at jobs (such as precutting and preassembling) ordinarily performed by members of the construction trades; includes all such workers, regardless of skill, engaged in any way in contract construction activities.

CONTRACT CONSTRUCTION - Covers only firms engaged in the construction business on a contract basis for others. Force-account construction workers, i.e., hired directly by and on the payroll of Federal, State, and local government, public utilities, and private establishments, are excluded from contract construction and included in the employment for such establishments.

DURABLE GOODS - The durable goods subdivision includes the following major industry groups: ordnance and accessories; lumber and wood products; furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated metal products; machinery; electrical machinery; transportation equipment; instruments and related products; and miscellaneous manufacturing industries as defined. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

FINANCE, INSURANCE, AND REAL ESTATE - Covers establishments operating in the fields of finance, insurance, and real estate, and beginning January 1952, also includes the Federal Reserve Banks and the mixed-ownership banks of the Farm Credit Administration for national and most State and area estimates. However, in a few State and area estimates the latter two agencies are included under Government until revisions can be made by the cooperating State agencies concerned. These exceptions are appropriately noted.

GOVERNMENT - Covers Federal, State, and local government establishments performing legislative, executive, and judicial functions, including Government corporations, Government force-account construction, and such units as arsenals, navy yards, and hospitals. Fourth-class postmasters are included in the national series and most State and area series. Exceptions are noted. State and local government employment includes teachers, but excludes, as nominal employees, paid volunteer firemen and elected officials of small local units.

LABOR TURNOVER:

Separations are terminations of employment during the calendar month and are classified according to cause: quits, discharges, layoffs, and miscellaneous separations (including military), as defined below.

Quits are terminations of employment during the calendar month initiated by employees for such reasons as: acceptance of a job in another company, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement where no company pension is provided. Failure to report after being hired and unauthorized absences of more than seven consecutive calendar days are also classified as quits. Prior to 1940, miscellaneous separations were also included in this category.

Discharges are terminations of employment during the calendar month initiated by the employer for such reasons as employees' incompetence, violation of rules, dishonesty, insubordination, laziness, habitual absenteeism, or inability to meet physical standards.

Layoffs are terminations of employment during the calendar month lasting or expected to last more than seven consecutive calendar days without pay, initiated by the employer without prejudice to the worker, for such reasons as lack of orders or materials,

release of temporary help, conversion of plant, introduction of labor-saving machinery or processes, or suspensions of operations without pay during inventory periods.

Miscellaneous separations (including military) are terminations of employment during the calendar month because of permanent disability, death, retirement on company pension, and entrance into the Armed Forces expected to last more than thirty consecutive calendar days. Prior to 1940, miscellaneous separations were included with quits. Beginning September 1940, military separations were included here.

Persons on leave of absence (paid or unpaid) with the approval of the employer are not counted as separations until such time as it is definitely determined that such persons will not return to work. At that time, a separation is reported as one of the above types, depending on the circumstances.

Accessions are the total number of permanent and temporary additions to the employment roll during the calendar month, including both new and rehired employees. Persons returning to work after a layoff, military separation, or other absences who have been counted as separations are considered accessions.

MANUFACTURING - Covers only private establishments. Government manufacturing operations such as arsenals and navy yards are excluded from manufacturing and included under Government.

MINING - Covers establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; includes various contract services required in mining operations, such as removal of overburden, tunneling and shafting, and the drilling or acidizing of oil wells; also includes ore dressing, beneficiating, and concentration.

NONDURABLE GOODS - The nondurable goods subdivision includes the following major industry groups: food and kindred products; tobacco manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; printing, publishing, and allied industries; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

NONSUPERVISORY EMPLOYEES - Includes employees (not above the working supervisory level) such as office and clerical workers, repairmen, salespersons, operators, drivers, attendants, service employees, linemen, laborers, janitors, watchmen, and similar occupational levels, and other employees whose services are closely associated with those of the employees listed.

PAYROLL - Private payroll represents the weekly payroll of both full- and part-time production and related workers who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month, before deduction for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues; also, includes pay for sick leave, holidays, and vacations taken. Excludes cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, and bonuses, unless earned and paid regularly each pay period.

PRODUCTION AND RELATED WORKERS - Includes working foremen and all nonsupervisory workers (including lead men and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial, watchman services, products development, auxiliary production for plant's own use (e.g., power plant), and record-keeping and other services closely associated with the above production operations.

REGIONS:

North - Includes all States except the 17 listed as South.

South - Includes the following 17 States: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.
(In the case of sawmills and planing mills, general, a third region is identified - the West - and includes California, Oregon, and Washington.)

SERVICE AND MISCELLANEOUS - Covers establishments primarily engaged in rendering services to individuals and business firms, including automotive repair services. Excludes domestic service workers. Non-government schools, hospitals, museums, etc. are included under service and miscellaneous; similar Government establishments are included under Government.

TRANSPORTATION AND PUBLIC UTILITIES - Covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services; or providing electricity, gas, steam, water, or sanitary service. Similar Government establishments are included under Government.

WHOLESALE AND RETAIL TRADE - Covers establishments engaged in wholesale trade, i.e., selling merchandise to retailers, and in retail trade, i.e., selling merchandise for personal or household consumption, and rendering services incidental to the sales of goods. Similar Government establishments are included under Government.
