EMPLOYMENT AND EARNINGS IN THE EAST

NORTH CENTRAL STATES 1950-1954....

The East North Central story on employment and earnings from 1950 to 1954 is discussed on pages xiii to xvii. This is the second of a series of articles reviewing such developments in each of a group of generally homogeneous States. Reprints will be available upon request.

THE PRIMARY METAL, FABRICATED

METAL, MACHINERY, AND ELECTRICAL

MACHINERY INDUSTRIES SINCE 1950...

The series of charts showing changes in employment, hours, earnings, and labor turnover in manufacturing industries since 1950 appear on pages ix through xii.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25 D.C. Subscription price: \$3.50 a year; \$1 additional for foreign mailing. Single copies vary in price. This issue is 40 cents.

REGIONAL OFFICES AND COOPERATING STATE AGENCIES...Inside back cover

The national employment figures shown in this report have been adjusted to first quarter 1954 benchmark levels.

Employment Trends

NONFARM JOBS HIT OCTOBER HIGH AT 50.4 MILLION

The total number of nonfarm jobs rose by nearly 100,000 in October 1955. This gain was slightly larger than average for this time of year and brought employment to 50.4 million—a new October peak.

Trade employment rose seasonally as the fall shopping season began. Employment also increased in State and local governments as schools reopened. These gains were partly offset by declines in service, construction, and transportation and public utilities.

The manufacturing work force, which usually declines at this time of year, went up slightly as a result of sharp increases in machinery and electrical machinery together with seasonal pickups in other industries. The only sizable manufacturing drop was the usual one in food processing.

The moderate factory employment rise was accompanied by a seasonal lengthening of the factory workweek. At 41.2 hours, the workweek was well above the postwar average for the month.

Longer hours together with a 1-cent increase in average hourly pay boosted average weekly earnings of factory production workers to \$78.69, an alltime peak and almost \$6.50 higher than last October.

Aggregate man-hours in mining, construction, and manufacturing—a measure of both the number of workers employed and the length of their workweek—were up about 8 percent over the year with all 3 sectors reporting higher man-hours.

GAINS IN DURABLE GOODS OUTWEIGHED SEASONAL DECLINE IN SOFT-GOODS PLANTS

Manufacturing employment at 16.9 million, was virtually unchanged between September and October, compared with an average decline of more than 50,000. In the durable-goods sector, most industries reported some gains, with the sharpest increases in electrical machinery and in nonelectrical machinery. The largest rise in the latter group, however, was due to the ending of a strike in agricultural machinery plants.

Employment in the transportation equipment group rose 9,000, mostly in shipbuilding and aircraft. The job total in the auto industry was almost unchanged as model changeover layoffs by one firm were offset by rehires elsewhere in the industry.

In the nondurable-goods sector, employment moved seasonally with a mixture of gains and losses. A sharp cutback in cannery employment at the end of the peak season reduced food employment by more than 80,000.

SEASONAL GAINS IN TRADE AND SCHOOLS

State and local governments reached an all-time peak by adding 144,000 employees, following the reopening of schools. Trade employment also rose seasonally, as pre-Christmas shopping began, raising the number of jobs in trade to 10.9 million, a new record for the month. General merchandise stores, including department stores, reported the largest over-the-month gain. Wholesale trade establishments added 28,000 workers and food and liquor stores boosted employment by about 21,000.

OUTDOOR ACTIVITIES REPORT EMPLOYMENT LOSSES

Construction employment dropped by 54,000 because of colder weather and the New England floods. The approach of winter also reduced activity in mining, while the drop of 33,000 in transportation and public utilities was due to cutbacks in rail transportation and a strike in the telephone industry.

FACTORY WORKWEEK UP BY THREE-TENTHS OF AN HOUR

The workweek of factory production workers rose by three-tenths of an hour to 41.2 hours in October, a normal rise for this time of year. Better-than-usual increases in the workweek were reported by fabricated metals, electrical machinery, instruments, tobacco and apparel. On the other hand, the expected rises did not occur in lumber, furniture, stone, clay and glass, machinery, and miscellaneous manufacturing.

Since October 1954 the factory workweek has risen by 1.3 hours, with both durable and non-durable industries going up about the same amount. The largest over-the-year increase—3.1 hours—was in primary metals, followed by nonelectrical machinery—1.8 hours—and leather—1.7 hours.

As a result of the longer workweek and a 1-cent rise in gross hourly pay, average weekly earnings of factory production workers rose to \$78.69, an alltime high. Most industries reported some gain in weekly pay. In primary metals the loss of more than one dollar per week reflected a decline from the September level which was inflated by premium pay for Labor Day.

Regional Patterns in Employment and Earnings

Part II. EAST NORTH CENTRAL STATES-

This is the second of a series which will review developments in employment and earnings since 1950 in each of a group of generally homogeneous States.

Introduction

The economic fortunes of the 32.5 million persons living in the East North Central States are largely dependent on industries which work and shape metals or assemble metal products into semifinished supplies, automobiles, trucks, and machinery, both electrical and other. The bulk of all such activity in the nation is concentrated in these States. The Great Lakes' waterways and a network of highways and railroads serve efficiently and economically to haul in coal and ores and to move the finished product to markets.

Because of its industrial composition, the area showed tremendous employment growth after the start of Korean hostilities and the almost uninterrupted upsurge of consumer spending. However, it was also set back heavily during the mid-1953 through mid-1954 business slump as durable-goods industries declined and again later in 1954 as the auto industry underwent model changeovers. Nevertheless, substantial pick-ups were evident as 1954 ended and were continuing into early 1955.

Table 1: Nonagricultural employment, by industry, East North Central States, 1950-54

Nonagricultural Employment

In this region nonfarm pursuits generate better than 90 percent of all income payments to individuals and about one-third of the total population work in nonfarm industries. Better than 40 percent of this work force of 11 million hold jobs in factories, representing a concentration far heavier than that for the country as a whole (about one-third). The giant automobile industry is, of course, one of the most important sources of factory jobs, with the producers of machinery a close second.

Since 1950, nonfarm employment in the East North Central States grew from 10.3 million to 11.5 million in 1953 and then fell to 10.9 million in 1954. As in the country at large, all industry divisions showed gains over 1950 except mining. By 1953, the peak year of this period, the manufacturing and construction industries had increased their work force more rapidly than the other divisions.

Coincident with the 15-percent growth in factory employment between 1950 and 1953 was the 34 percent gain in factory output, as measured by the dollar value added by manufactures. This gain was largely achieved by far better than average increases in the output of the region's key industries such as the machinery (electrical and other), transportation equipment, and primary metal industries. Only the textile industry declined over the 4-year period.

In most industries, output increased far more rapidly than did factory employment. This differential resulted from such factors as gains in productivity, increases in prices, shifts in product-mix, among others.

Table 2: Source of change in civilian population, United States and East North Central States, April 1950 — July 1953

Bureau of the Census

The 1954 decline hit manufacturing most heavily. Employment dropped to 4.6 million—more than a half million below 1953 and only 120,000 higher than the 1950 level. Only 3 industries continued to increase their work force into 1954—construction, finance, and government. No doubt the population increase resulting from a record volume of births in these States has had some influence in maintaining the expansion of construction and government employment.

The impact of the 1954 decline is also measured in the tripling of the number of persons

Table 3: Hours and gross earnings of production workers in manufacturing industries, East North Central States, 1950 and 1954

Industry	Average weekly earnings		Average weekly hours		Average hourly earnings

Note: In combining State data, all employee figures were used as weights since production-worker employment data are not available in this office.

receiving State unemployment insurance payments during an average week—from 120,000 to 360,000. For the nation as a whole, the 1954 unemployment rolls were twice the 1953 totals.

Transportation equipment was the hardest hit by the general business decline and the curtailments which accompanied the model changeovers in automobile plants. The number of jobs provided by the industry had declined from 1953 to 1954 by nearly 200,000 to just above the 1950 level of 740,000. By early 1955, these plants were setting new production records and much of the preceding year's losses had been recovered.

Nationally, the tremendous employment increase in the transportation equipment industry—nearly 40 percent in five years—has been largely in the aircraft segment. The East North Central Region, accounting for most of the nation's automobile workers but very few of its aircraft employees, has been little affected by this change.

Other metalworking industries also declined sharply in 1954. Employment in primary and fabricated metals dropped below 1950 levels, declining roughly 12 percent from 1953. Some recovery was indicated in early 1955, when these industries were again above their 1950 employment totals.

Employment in the machinery industries, electrical and nonelectrical, rose one-fourth between 1950 and 1953. Following a slump in 1954, employment in these industries was still better than 10 percent above 1950. No further significant increase occurred in 1955.

Earnings

The major manufacturing industries in the East North Central States are among those with high wage scales as well as among those which have frequently scheduled overtime work. Consequently, average hourly earnings for production workers have

**Chart 3. Percent Increase in Hourly Earnings
SELECTED MANUFACTURING INDUSTRIES
East North Central States, 1950 and 1954**

UNITED STATES DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

been considerably above the average for the entire country. The longer workweek coupled with the higher level of earnings per hour have provided a bigger weekly pay check than the national average for factory workers. In 1954, the weekly pay before deductions averaged about \$80-\$8 over the national average.

During and after the Korean period, the heavy manufacturing industries which dominate in the area boosted the dollar volume of their payrolls to levels never before attained. The resulting expanded income resources flowed into trade, service, and other activities, bringing substantial gains.

In the period of industrial growth between 1950 and 1953, average hourly earnings rose 9 to 14 cents each year. The 1954 business decline slowed but did not stop the upward wage trend and hourly earnings reached \$1.98, almost 40 cents more than in 1950. A relatively small increase, averaging 4 cents, was evident in all industry groups, including those suffering a sizable reduction in employment. Labor-management agreements negotiated during the year generally included smaller wage increases than had been achieved in earlier contracts.

A general cutback in the amount of over-time worked in 1954 reduced the average workweek by a little over an hour, thus holding weekly earnings slightly below the level of the previous year. The severest cutbacks occurred in the machinery and

primary metal industries which reduced their workweek by 1.6 and 2.6 hours, respectively.

Shipyards

Table A-4: Employees in Government and private shipyards, by region

(In thousands)

Region ^{1/}	1955		1954
	September	August	September
ALL REGIONS	205.8	208.4	208.5
PRIVATE YARDS	98.2	100.4	100.9
NAVY YARDS	107.6	108.0	107.6
NORTH ATLANTIC	88.0	88.4	86.1
Private yards.....	40.9	41.0	38.8
Navy yards ^{2/}	47.1	47.4	47.3
SOUTH ATLANTIC	36.5	36.6	37.4
Private yards.....	15.4	15.6	17.3
Navy yards.....	21.1	21.0	20.1
GULF:			
Private yards.....	22.6	23.3	23.5
PACIFIC	49.9	51.4	52.9
Private yards.....	10.5	11.8	12.7
Navy yards.....	39.4	39.6	40.2
GREAT LAKES:			
Private yards.....	3.3	3.1	4.7
INLAND:			
Private yards.....	5.5	5.6	3.9

^{1/} The North Atlantic region includes all yards bordering on the Atlantic in the following States: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

The South Atlantic region includes all yards bordering on the Atlantic in the following States: Florida, Georgia, North Carolina, South Carolina, and Virginia.

The Gulf region includes all yards bordering on the Gulf of Mexico in the following States: Alabama, Florida, Louisiana, Mississippi, and Texas.

The Pacific region includes all yards in California, Oregon, and Washington.

The Great Lakes region includes all yards bordering on the Great Lakes in the following States: Illinois, Michigan, Minnesota, New York, Ohio, Pennsylvania, and Wisconsin.

The Inland region includes all other yards.

^{2/} Data include Curtis Bay Coast Guard Yard.

Table A-5: Federal personnel, civilian and military

(In thousands)

Branch and agency	1955		1954
	September	August	September
TOTAL FEDERAL CIVILIAN EMPLOYMENT ^{1/}	2,173	2,190	2,142
Executive ^{2/}	2,146.9	2,164.5	2,115.9
Department of Defense.....	1,035.1	1,040.0	1,012.6

BITUMINOUS-COAL MINING	2.1	1.7	1.7	1.3	.7	.6	.1	(1/)	.8	.4	.1	.1
COMMUNICATION:												
Telephone.....	(2/)	2.3	(2/)	2.0	(2/)	1.7	(2/)	.1	(2/)	.2	(2/)	.1
Telegraph. 3/.....	(2/)	2.1	(2/)	1.8	(2/)	1.4	(2/)	.1	(2/)	.2	(2/)	.2

1/ Less than 0.05. 2/ Not available. 3/ Data relate to domestic employees except messengers and those compensated entirely on a commission basis.

*/ July 1955 rates for Total separations and Layoffs, respectively, revised as follows: Total manufacturing 3.4, and 1.3; Durable 3.5, and 1.5; Transportation equipment 5.5, and 3.5; Automobiles 7.2, and 5.1.

Table B-3: Monthly labor turnover rates of men and women in selected manufacturing industry groups 1/

Industry group	July 1955					
	Men (rate per 100 men)			Women (rate per 100 women)		
	Total accession	Separation		Total accession	Separation	
	Total	Quit		Total	Quit	
MANUFACTURING	3.3	3.1	1.4	4.0	4.0	2.3
DURABLE GOODS	3.3	3.4	1.4	3.7	4.1	2.0
Ordnance and accessories.....	2.8	2.5	1.3	3.4	3.2	2.1
Lumber and wood products (except furniture)...	4.8	4.5	3.1	2.5	3.8	1.6
Furniture and fixtures.....	4.7	3.2	2.1	3.7	3.3	2.2
Stone, clay, and glass products.....	2.9	2.6	1.1	3.9	4.0	2.0
Primary metal industries.....	2.8	2.1	1.1	2.5	2.8	1.5
Fabricated metal products (except ordnance, machinery, and transportation equipment).....	3.9	4.2	1.6	3.7	5.1	2.1
Machinery (except electrical).....	2.4	2.1	1.0	3.0	3.5	1.7
Electrical machinery.....	2.6	2.4	1.1	4.1	3.6	2.1
Transportation equipment.....	3.9	5.6	1.3	3.3	5.9	2.0
Instruments and related products.....	1.8	1.6	.7	2.3	2.7	1.6
Miscellaneous manufacturing industries.....	3.4	2.9	1.6	6.0	5.0	2.9
NONDURABLE GOODS	3.1	2.6	1.2	4.2	4.0	2.6
Food and kindred products.....	4.6	3.5	1.4	6.5	5.0	2.2
Tobacco manufactures.....	2.9	1.9	1.1	3.8	2.5	2.1
Textile-mill products.....	3.3	3.6	1.9	3.5	3.7	2.1
Apparel and other finished textile products...	4.4	3.6	1.8	3.9	4.4	3.3
Paper and allied products.....	2.4	2.0	1.1	4.7	3.8	2.4
Chemicals and allied products.....	1.7	1.1	.6	3.1	2.7	1.7
Products of petroleum and coal.....	1.0	.8	.4	3.2	2.4	1.8
Rubber products.....	2.5	2.1	1.2	3.6	4.2	2.0
Leather and leather products.....	4.1	3.5	1.9	5.0	3.8	3.0

1/ These figures are based on a slightly smaller sample than those in tables B-1 and B-2, inasmuch as some firms do not report separate data for women.

Table C-1: Hours and gross earnings of production workers or nonsupervisory employees

Industry	Average weekly earnings			Average weekly hours			Average hourly earnings		
	Sept. 1955	Aug. 1955	Sept. 1954	Sept. 1955	Aug. 1955	Sept. 1954	Sept. 1955	Aug. 1955	Sept. 1954
MINING:

1/ Not available.

2/ Data relate to employees in such occupations in the telephone industry as switchboard operators; service assistants; operating room instructors; and pay-station attendants. During 1954 such employees made up 43 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

3/ Data relate to employees in such occupations in the telephone industry as central office craftsmen; installation and exchange repair craftsmen; line, cable, and conduit craftsmen; and laborers. During 1954 such employees made up 25 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

4/ Data relate to domestic employees except messengers and those compensated entirely on a commission basis.

5/ Money payments only; additional value of board, room, uniforms, and tips, not included.

Sept.....	118.1	110.7	108.9	95.6	116.9	94.8

^{1/} Aggregate man-hours are for the weekly pay period ending nearest the 15th of the month and do not represent totals for the month. For mining and manufacturing industries, data refer to production and related workers. For contract construction, the data relate to construction workers.

^{2/} Includes only the divisions shown.

Explanatory Notes

INTRODUCTION

The statistics for nonfarm industries presented in this monthly report are part of the broad program of the Bureau of Labor Statistics to provide timely, comprehensive, accurate, and detailed information for the use of businessmen, government officials, legislators, labor unions, research workers, and the general public. The statistics are an integral part of the Federal statistical system, and are considered basic indicators of the state of the Nation's economy. They are widely used in following and interpreting business developments and in making decisions in such fields as labor-management negotiations, marketing, personnel, plant location, and government policy. In addition, Government agencies use the data in this report to compile official indexes of production, labor productivity, and national income.

ESTABLISHMENT REPORTS:

a. Collection

The employment statistics program, which is based on establishment payroll reports, provides current data for both full- and part-time workers on payrolls of nonagricultural establishments (see glossary for definition, p. 7-E) during a specified period each month. The BLS uses two "shuttle" schedules for this program, the BLS Form 790 (for employment, payroll, and man-hours data) and the BLS Form 1219 (for labor turnover data). The shuttle schedule, used by BLS for more than 25 years, is designed to assist firms to report consistently, accurately, and with a minimum of cost. The questionnaire provides space for the establishment to report for each month of the current calendar year; in this way, the employer uses the same schedule for the entire year.

Under a cooperative arrangement with the BLS, State agencies mail the BLS 790 Forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the information to prepare State and area series and then send the data to the BLS Division of Manpower and Employment Statistics for use in preparing the national series.

The BLS 1219 schedules are mailed by BLS to the establishments which return them directly to the BLS Washington office for use in preparing turnover rates on a national basis.

b. Industrial Classification

Establishments are classified into industries on the basis of their principal product or activity determined from information on annual sales volume. This information is collected each year. For manufacturing establishments, a product supplement to the monthly 790 report is used. The supplement provides for reporting the percentage of total sales represented by each pro-

duct. Information for nonmanufacturing establishments is collected on the 790 form itself. In the case of an establishment making more than one product or engaging in more than one activity, the entire employment of the unit is included under the industry indicated by the most important product or activity. The titles and descriptions of industries presented in the Standard Industrial Classifical Manual, (U. S. Bureau of the Budget, Washington, D. C.) are used for classifying reports from manufacturing and government establishments; the 1942 Industrial Classification Code, (U. S. Social Security Board) for reports from all other establishments.

c. Coverage

Monthly reports on employment and, for most industries, payroll and man-hours are obtained from approximately 155,000 establishments. (See table below.) The table also shows the approximate proportion of total employment in each industry division covered by the group of establishments furnishing monthly employment data. The coverage for individual industries within the division may vary from the proportions shown.

Approximate size and coverage of BLS employment and payrolls sample ^{1/}

Division or industry	Number of establishments in sample	Employees	
		Number in sample	Percent of total
Mining.....	3,300	400,000	50
Contract construction..	19,700	783,000	28
Manufacturing.....	44,100	10,602,000	65
Transportation and public utilities:			
Interstate railroads. (ICC).....	—	1,037,000	95
Other transportation and public utilities.	13,600	1,430,000	51
Wholesale and retail trade.....	60,300	1,760,000	17
Finance, insurance, and real estate.....	10,600	517,000	25
Service and miscellaneous:			
Hotels and lodging places.....	1,300	145,000	31
Personal services:			
Laundries and cleaning and dyeing plants.....	2,300	99,000	23
Government:			
Federal (Civil Service Commission).....	—	2,139,000	100
State and local.....	4,100	3,223,000	69

^{1/} Some firms do not report payroll and man-hour information. Therefore, hours and earnings estimates may be based on a slightly smaller sample than employment estimates.

Labor turnover reports are received from approximately 10,000 cooperating establishments in the manufacturing, mining, and communication industries (see table below). The definition of manufacturing used in the turnover series is not as extensive as in the BLS series on employment and hours and earnings because of the exclusion of the following major industries from the labor turnover sample: printing, publishing, and allied industries (since April 1943); canning and preserving fruits, vegetables, and sea foods; women's and misses' outerwear; and fertilizer.

1/ Does not apply.

DEFINITIONS AND ESTIMATING METHODS:

A. EMPLOYMENT

Definition

Employment data for all except Federal Government establishments refer to persons who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. For Federal Government establishments current data generally refer to persons who worked on, or received pay for, the last day of the month.

Persons on an establishment payroll who are on paid sick leave, paid holiday, or paid vacation, or who work during a part of the specified pay period and are unemployed or on strike during the other part of the period are counted as employed. Persons are not considered employed who are laid off or are on leave without pay, who are on strike for the entire period, or who are hired but do not report to work during the period. Proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households are also excluded. Government employment covers only civilian employees; Federal military personnel are shown separately, but their number is excluded from total nonagricultural employment.

With respect to employment in educational institutions (private and governmental), BLS considers regular full-time teachers to be employed during the summer vacation period whether or not they are specifically paid in those months.

Benchmark Data

Employment estimates are periodically compared with complete counts of employment in the various nonagri-

cultural industries, and appropriate adjustments made as indicated by the total counts or benchmarks. The comparison made for the first 3 months of 1954 resulted in changes amounting to less than 0.2 percent of all nonagricultural employment. Among the industry divisions changes ranged from 0.2 percent for finance, insurance, and real estate to 3.1 percent in contract construction. Manufacturing industries as a whole were changed by 0.3 percent. Within manufacturing, 57 of the 132 individual industries required no adjustment because the estimate and benchmark differed by less than 1.0 percent or less than 500 and 59 were adjusted by 1.0 - 5.0 percent. The most significant cause of differences between the benchmark and estimate for these individual industries was the change in industrial classification of individual firms which cannot be reflected in BLS estimates until they are adjusted to new benchmarks. During 1953 more than 250,000 employees were in establishments whose industry classification changed. Other causes of differences were sampling and response errors.

The basic sources of benchmark information are the quarterly tabulations of employment data, by industry, compiled by State agencies from reports of establishments covered under State unemployment insurance laws. Supplementary tabulations prepared by the U. S. Bureau of Old Age and Survivors Insurance are used for the group of establishments exempt from State unemployment insurance laws because of their small size. Benchmarks for industries wholly or partly excluded from the unemployment insurance laws are derived from a variety of other sources.

The BLS estimates which are prepared for the benchmark quarter are compared with the new benchmark levels, industry by industry. Where revisions are necessary, the monthly estimates are adjusted between the new benchmark and the preceding one. Following revision for these intermediate periods, the industry data from the most recent benchmark are projected to the current month by use of the sample trends. Under this procedure, the benchmark is used to establish the level of employment while the sample is used to measure the month-to-month changes in the level.

Estimating Method

The estimating procedure for industries for which data on both "all employees" and "production and related workers" are published (manufacturing and selected mining industries) is outlined below; the first step under this method is also used for industries for which only figures on "all employees" are published.

The first step is to compute total employment (all employees) in the industry for the month following the benchmark period. The all-employee total for the last benchmark month (e.g., March) is multiplied by the percent change of total employment over the month for the group of establishments reporting for both March and April. Thus, if firms in the BLS sample for an industry report 30,000 employees in March and 31,200 in April, April employment is 104 percent (31,200 divided by 30,000) of March employment. If the all-employee benchmark in March is 40,000, the all-employee total in April would be 104 percent of 40,000 or 41,600.

The second step is to compute the production-worker total for the industry. The all-employee total for the month is multiplied by the ratio of production

workers to all employees. This ratio is computed from establishment reports in the monthly sample. Thus, if these firms in April report 24,960 production workers and a total of 31,200 employees, the ratio of production workers to all employees would be .80 (24,960 divided by 31,200). The production-worker total in April would be 33,280 (41,600 multiplied by .80).

Figures for subsequent months are computed by carrying forward the totals for the previous month according to the method described above.

The number of women employees in manufacturing, published quarterly, is computed by multiplying the all-employee estimate for the industry by the ratio of women to all employees as reported in the industry sample.

Employment Adjusted for Seasonal Variation

Employment series for many industries reflect a regularly recurring seasonal movement which can be measured on the basis of past experience. By eliminating that part of the change in employment which can be ascribed to usual seasonal variation, it is possible to clarify the cyclical and other nonseasonal movements in the series. Adjusted employment aggregates are shown and also indexes (1947-49 = 100) derived from these aggregates. The indexes have the additional advantage of comparing the current seasonally adjusted employment level with average employment in the base period.

Comparability with Other Employment Estimates

Employment data published by other government and private agencies may differ from BLS employment statistics because of differences in definition, sources of information, methods of collection, classification, and estimation. BLS monthly figures are not directly comparable, for example, with the estimates of the Census Monthly Report on the Labor Force (MRLF). Census data are obtained by personal interviews with individual members of a small sample of households and are designed to provide information on the work status of the whole population, classified by their demographic characteristics. The BLS, on the other hand, obtains data by mail questionnaire which are based on the payroll records of business units, and prepares detailed statistics on the industrial and geographic distribution of employment and on hours of work and earnings.

Since BLS employment figures are based on establishment payroll records, persons who worked in more than one establishment during the reporting period will be counted more than once in the BLS series. By definition, proprietors, self-employed persons, domestic servants, and unpaid family workers are excluded from the BLS but not the MRLF series.

Employment estimates derived by the Bureau of the Census from its censuses and/or annual sample surveys of manufacturing establishments also differ from BLS employment statistics. Among the important reasons for lack of comparability are differences in industries covered, in the business units considered parts of an establishment, and in the industrial classification of establishments. Similar differences exist between the BLS data and those in County Business Patterns published jointly by the U.S. Department of Commerce and the U.S. Department of Health, Education and Welfare.

B. LABOR TURNOVER

Definition

"Labor turnover," as used in the BLS program, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms during a calendar month. This movement is subdivided into two broad types: accessions (new hires and rehires) and separations (terminations of employment initiated by either employer or employee). Each type of action is cumulated for a calendar month and expressed as a rate per 100 employees. All employees, including executive, office, sales, other salaried personnel, and production workers are covered by both the turnover movements and the employment base used in computing labor turnover rates. All groups of employees--full- and part-time, permanent, and temporary--are included. Transfers from one establishment to another within a company are not considered to be turnover items.

Method of Computation

To compute turnover rates for individual industries, the total number of each type of action (accessions, quits, etc.) reported for a calendar month by the sample establishments in each industry is first divided by the total number of employees reported by these establishments, who worked during, or received pay for, any part of the pay period ending nearest the 15th of that month. The result is multiplied by 100 to obtain the turnover rate.

For example, in an industry sample, the total number of employees who worked during, or received pay for, the week of January 12-18 was reported as 25,498. During the period January 1-31 a total of 284 employees in all reporting firms quit. The quit rate for the industry is:

$$\frac{284}{25,498} \times 100 = 1.1$$

To compute turnover rates for broader industrial categories, the rates for the component industries are weighted by the estimated employment.

Separate turnover rates for men and women are published quarterly for 1 month in each quarter. Only accessions, quits, and total separations are published. These rates are computed in the same manner as the all-employee rates; for example, the quit rate for women is obtained from an industry sample by dividing the number of women who quit during the month by the number of women employees reported.

Average monthly turnover rates for the year for all employees are computed by dividing the sum of the monthly rates by 12.

Comparability with Earlier Data

Labor turnover rates are available on a comparable basis from January 1930 for manufacturing as a whole and from 1943 for two coal mining and two communication industries. Rates for many individual industries and industry groups for the period prior to January 1950 are not comparable with those for the subsequent period because of a revision which involved (1) the adoption of the Standard Industrial Classification (1945) code structure for manufacturing industries, and (2) the introduction of weighting

in the computation of industry-group rates.

Comparability with Employment Series

Month-to-month changes in total employment in manufacturing industries reflected by labor turnover rates are not comparable with the changes shown in the Bureau's employment series for the following reasons:

- (1) Accessions and separations are computed for the entire calendar-month; the employment reports, for the most part, refer to a 1-week pay period ending nearest the 15th of the month.
- (2) The turnover sample excludes certain industries (see under coverage, p. 2-E).
- (3) Plants on strike are not included in the turnover computations beginning with the month the strike starts through the month the workers return; the influence of such stoppages is reflected, however, in the employment figures.

C. HOURS AND EARNINGS

Definitions of production workers, nonsupervisory employees, payrolls, and man-hours from which hours and earnings data are derived are included in the glossary, page 7-E. Methods used to compute hours and earnings averages are described in summary of methods for computing national statistics, page 6-E.

Gross Average Hourly and Weekly Earnings

Average hourly earnings for manufacturing and non-manufacturing industries are on a "gross" basis, i.e., they reflect not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive basis. Employment shifts between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings refer to the actual return to the worker for a stated period of time; rates are the amounts stipulated for a given unit of work or time. However, the average earnings series does not measure the level of total labor costs on the part of the employer, since the following are excluded: irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production-worker or nonsupervisory-employee definitions.

Gross average weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism.

Average Weekly Hours

The workweek information relates to average hours worked or paid for, and is somewhat different from standard or scheduled hours. Normally, such factors

as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishments. Group averages further reflect changes in the workweek of component industries.

Gross Average Weekly Earnings in Current and 1947-49 Dollars

These series indicate changes in the level of weekly earnings before and after adjustment for changes in purchasing power as determined from the BLS Consumer Price Index.

Net Spendable Average Weekly Earnings

Net spendable average weekly earnings in current dollars are obtained by deducting Federal social security and income taxes from gross weekly earnings. The amount of income tax liability depends on the number of dependents supported by the worker, as well as on the level of his gross income. To reflect these variables, net spendable earnings have been computed for two types of income receivers: (1) a worker with no dependents; and (2) a worker with three dependents.

The computations of net spendable earnings for both the factory worker with no dependents and the factory worker with three dependents are based upon the gross average weekly earnings for all production workers in manufacturing industries without regard to marital status, family composition, and total family income.

Net spendable weekly earnings in 1947-49 dollars represent an approximate measure of changes in "real" net spendable weekly earnings. "Real" earnings are computed by dividing the current Consumer Price Index into the spendable earnings average for the current month. The resulting level of spendable earnings expressed in 1947-49 dollars is thus adjusted for changes in purchasing power since that base period.

Average Hourly Earnings, Excluding Overtime, of Production Workers in Manufacturing Industries

These data are based on the application of adjustment factors to gross average hourly earnings (as described in the Monthly Labor Review, May 1950, pp. 537-540; reprint available, Serial No. R. 2020). This method eliminates only the earnings due to overtime paid for at one and one-half times the straight-time rates after 40 hours a week. Thus, no adjustment is made for other premium-payment provisions—for example, holiday work, late-shift work, and overtime rates other than time and one-half.

Indexes of Aggregate Weekly Man-Hours

The indexes of aggregate weekly man-hours are prepared by dividing the current month's aggregate by the monthly average for the 1947-49 period. These aggregates represent the product of average weekly hours and employment.

The aggregate man-hours are defined as total man-hours for which pay was received by full- and part-time production or construction workers, including hours paid for holidays, sick leave, and vacations taken. The man-hours are for 1 week of the pay period ending nearest the 15th of the month, and may not be

typical of the entire month.

Railroad Hours and Earnings

The figures for Class I railroads (excluding switching and terminal companies) are based upon monthly data summarized in the M-300 report of the Interstate Commerce Commission and relate to all employees who received pay during the month, except executives, officials, and staff assistants (ICC Group I). Gross average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, reduced to a weekly basis, by the number of employees, as defined above. Gross average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Because hours and earnings data for manufacturing and other nonmanufacturing industries are based upon reports to the BLS which generally represent 1 weekly pay period ending nearest the 15th of the month, the data for railroad employees are not strictly comparable with

other industry information shown in this publication.

STATISTICS FOR STATES AND AREAS

State and area employment, hours, and earnings statistics are collected and prepared by State agencies in cooperation with the BLS. These statistics are based on the same establishment reports used by the BLS for preparing national estimates. State employment series are adjusted to benchmark data from State unemployment insurance agencies and the Bureau of Old Age and Survivors Insurance. Because some States have more recent benchmarks than others and use slightly varying methods of computation, the sum of the State figures may differ slightly from the official U. S. totals prepared by the BLS.

Additional industry detail may be obtainable from the cooperating State agencies listed on the inside back cover of this report.

NOTE: Additional information concerning the preparation of the employment, hours, earnings, and labor turnover series—concepts and scope, survey methods, and reliability and limitations—is contained in technical notes for each of these series. (See page 9-E.) For all of this information as well as similar material for other BLS statistics, see Techniques of Preparing Major BLS Statistical Series, BLS Bull. 1168, December 1954.

SUMMARY OF METHODS FOR COMPUTING NATIONAL STATISTICS

EMPLOYMENT, HOURS, AND EARNINGS

Item	Individual manufacturing and nonmanufacturing industries	Total nonagricultural divisions, major groups, and groups
MONTHLY DATA		
<u>All employees</u>	All-employee estimate for previous month multiplied by ratio of all employees in current month to all employees in previous month for sample establishments which reported for both months.	Sum of all-employee estimates for component industries.
<u>Production workers</u>	All-employee estimate for current month multiplied by ratio of production workers to all employees in sample establishments for current month.	Sum of production-worker estimates for component industries.
<u>Average weekly hours</u>	Total production or nonsupervisory man-hours divided by number of production or nonsupervisory workers.	Average, weighted by employment, of the average weekly hours for component industries.
<u>Average hourly earnings</u>	Total production or nonsupervisory worker payroll divided by total production or nonsupervisory worker man-hours.	Average, weighted by aggregate man-hours, of the average hourly earnings for component industries.
<u>Average weekly earnings</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.
ANNUAL AVERAGE DATA		
<u>All employees and production workers</u>	Sum of monthly estimates divided by 12.	Sum of monthly estimates divided by 12.
<u>Average weekly hours</u>	Annual total of aggregate man-hours (employment multiplied by average weekly hours) divided by annual sum of employment.	Average, weighted by employment, of the annual averages of weekly hours for component industries.
<u>Average hourly earnings</u>	Annual total of aggregate payrolls (weekly earnings multiplied by employment) divided by annual aggregate man-hours.	Average, weighted by aggregate man-hours, of the annual averages of hourly earnings for component industries.
<u>Average weekly earnings</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.

GLOSSARY

ALL EMPLOYEES - The total number of persons on establishment payrolls who worked full- or part-time or received pay for any part of the pay period ending nearest the 15th of the month. Includes salaried officers of corporations as well as employees on the establishment payroll engaged in new construction and major additions or alterations to the plant who are utilized as a separate work force (force-account construction workers). Proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces are excluded.

CONSTRUCTION WORKERS - Includes working foremen, journeymen, mechanics, apprentices, helpers, laborers, and similar workers engaged in new work, alterations, demolition, and other actual construction work, at the site of construction or working in shop or yard at jobs (such as precutting and pre-assembling) ordinarily performed by members of the construction trades; includes all such workers regardless of skill, engaged in any way in contract construction activities.

CONTRACT CONSTRUCTION - Covers only firms engaged in the construction business on a contract basis for others. Force-account construction workers, i.e., hired directly by and on the payroll of Federal, State, and local government, public utilities, and private establishments, are excluded from contract construction and included in the employment for such establishments.

DURABLE GOODS - The durable-goods subdivision includes the following major manufacturing industry groups: ordnance and accessories; lumber and wood products; furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated metal products; machinery; electrical machinery; transportation equipment; instruments and related products; and miscellaneous manufacturing industries as defined. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

ESTABLISHMENT - "A single physical location where business is conducted or where services or industrial operations are performed; for example, a factory, mill, store, mine, or farm. Where a single physical location comprises two or more units which maintain separate payroll and inventory records and which are engaged in distinct or separate activities for which different industry classifications are provided in the Standard Industrial Classification, each unit shall be treated as a separate establishment. An establishment is not necessarily identical with the business concern or firm which may consist of one or more establishments. It is also to be distinguished from organizational subunits, departments, or divisions within an establishment." (Standard Industrial Classification Manual, U. S. Bureau of the Budget, Vol. I, Part I, p. 1, November 1945.)

FINANCE, INSURANCE, AND REAL ESTATE - Covers private establishments operating in the fields of finance (banks, security dealers, loan agencies, holding companies, and other finance agencies); insurance (insurance carriers and independent agents and brokers); and real estate (real estate owners, including

speculative builders, subdividers, and developers; and agents and brokers).

GOVERNMENT - Covers Federal, State, and local government establishments performing legislative, executive, and judicial functions, including Government corporations, Government force-account construction, and such units as arsenals, navy yards, and hospitals. Federal government employment excludes employees of the Central Intelligence Agency. State and local government employment includes teachers, but excludes, as nominal employees, paid volunteer firemen and elected officials of small local units.

LABOR TURNOVER:

Separations are terminations of employment during the calendar month and are classified according to cause: quits, discharges, layoffs, and miscellaneous separations (including military), as defined below.

Quits are terminations of employment during the calendar month initiated by employees for such reasons as: acceptance of a job in another company, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement where no company pension is provided. Failure to report after being hired and unauthorized absences of more than 7 consecutive calendar days are also classified as quits. Prior to 1940, miscellaneous separations were also included in this category.

Discharges are terminations of employment during the calendar month initiated by the employer for such reasons as employees' incompetence, violation of rules, dishonesty, insubordination, laziness, habitual absenteeism, or inability to meet physical standards.

Layoffs are terminations of employment during the calendar month lasting or expected to last more than 7 consecutive calendar days without pay, initiated by the employer without prejudice to the worker, for such reasons as lack of orders or materials, release of temporary help, conversion of plant, introduction of labor-saving machinery or processes, or suspensions of operations without pay during inventory periods.

Miscellaneous separations (including military) are terminations of employment during the calendar month because of permanent disability, death, retirement on company pension, and entrance into the Armed Forces expected to last more than 30 consecutive calendar days. Prior to 1940, miscellaneous separations were included with quits. Beginning September 1940, military separations were included here.

Persons on leave of absence (paid or unpaid) with the approval of the employer are not counted as separations until such time as it is definitely determined that such persons will not return to work. At that time, a separation is reported as one of the above types, depending on the circumstances.

Accessions are the total number of permanent and temporary additions to the employment roll during the calendar month, including both new and rehired employees. Persons returning to work after a layoff, military separations, or other absences who have been counted as separations are considered accessions.

MAN-HOURS - Covers man-hours worked or paid for of specified groups of workers, during the pay period ending nearest the 15th of the month. The specified group of workers in manufacturing and mining industries, laundries, and cleaning and dyeing plants is production and related workers; in the contract construction industry, it is construction workers; and in the other industries, it is nonsupervisory employees. The man-hours include hours paid for holidays, sick leave, and vacations taken; if the employee elects to work during a vacation period, the vacation pay and the hours it represents are omitted.

MANUFACTURING - Covers private establishments engaged in the mechanical or chemical transformation of inorganic or organic substances into new products and usually described as plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment. Establishments engaged in assembling component parts of manufactured products are also considered manufacturing if the new product is neither a structure nor other fixed improvement. Government manufacturing operations such as arsenals and navy yards are excluded from manufacturing and are included under Government.

MINING - Covers establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; includes various contract services required in mining operations, such as removal of overburden, tunneling and shafting, and the drilling or acidizing of oil wells; also includes ore dressing, beneficiating, and concentration.

NONDURABLE GOODS - The nondurable-goods subdivision includes the following major manufacturing industry groups: food and kindred products; tobacco manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; printing, publishing, and allied industries; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

NONSUPERVISORY EMPLOYEES - Includes employees (not above the working supervisory level) such as office and clerical workers, repairmen, salespersons, operators, drivers, attendants, service employees, linemen, laborers, janitors, watchmen, and similar occupational levels, and other employees whose services are closely associated with those of the employees listed.

PAYROLL - The weekly payroll (except for State and local governments) for the specified groups of full- and part-time employees who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. The specified group of employees in the manufacturing and mining industries, laundries, and cleaning and dyeing plants is production and related workers; in the contract construction industry, it is construction workers; and in the other industries, it is nonsupervisory employees. The payroll is reported before deductions for old-age and unemployment insurance, group insurance,

withholding tax, bonds, and union dues; also includes pay for sick leave, holidays, and vacations taken. Excludes cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, and bonuses, unless earned and paid regularly each pay period.

The same definition applies to payrolls for State and local governments except that in this case the payrolls are for the entire month and cover all employees, including nominals who are excluded from employment. Furthermore, these payrolls do not reflect the adjustment BLS makes in the State and local government employment estimate for the summer months to include the number of regular full-time teachers on vacation but who are not specifically paid in those months.

PRODUCTION AND RELATED WORKERS - Includes working foremen and all nonsupervisory workers (including lead men and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial, watchman services, products development, auxiliary production for plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

REGIONS:

North - Includes all States except the 17 listed as South.

South - Includes the following 17 States: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

(In the case of sawmills and planning mills, general, a third region is identified - the West - and includes California, Oregon, and Washington.)

SERVICE AND MISCELLANEOUS - Covers establishments primarily engaged in rendering services to individuals and business firms, including automotive repair services. Excludes domestic service workers. Non-government schools, hospitals, museums, etc., are included under service and miscellaneous; similar Government establishments are included under Government.

TRANSPORTATION AND PUBLIC UTILITIES - Covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services or providing electricity, gas, steam, water, or sanitary service. Similar Government establishments are included under Government.

WHOLESALE AND RETAIL TRADE - Covers establishments engaged in wholesale trade, i.e., selling merchandise to retailers, and in retail trade, i.e., selling merchandise for personal or household consumption, and rendering service incidental to the sales of goods. Similar Government establishments are included under Government.

EMPLOYMENT AND EARNINGS DATA

Available from BLS free of charge

Use order blank below

- **HISTORICAL SUMMARY TABLES** for every industry or special series contained in sections A and C

When ordering, please specify which industry or special series are wanted - see table for name of industry

Similar tables for those industries in section B will be available in late 1955

- **STATE EMPLOYMENT** 1939-1954 - Summary tables for each State, by industry division

- **GUIDE TO EMPLOYMENT STATISTICS OF BLS** - Shows the beginning date of all series published and gives each industry definition

- **TECHNICAL NOTES on:**
