The national employment figures shown in this report have been adjusted to first quarter 1955 benchmark levels.

# A Note Concerning---

## THE COOPERATIVE LABOR TURNOVER STATISTICS PROGRAM

The Department of Labor has launched a program for the collection and publication of labor turnover statistics which will integrate the current activities in this field of the Bureau of Labor Statistics, Bureau of Employment Security, and State employment security agencies.

The BLS has been computing and publishing monthly labor turnover rates for manufacturing on a national basis for more than a quarter century. Over the years, rates have been prepared for an increasing number of individual industries and are now published for 120 industries in manufacturing, mining, and communication activities. The current BLS program, based on a national sample of approximately 10,000 establishments, is the successor to one established in 1926 by the Metropolitan Life Insurance Co. and transferred in 1929 to the BLS.

Since the early days of World War II, the State employment security agencies have been collecting labor turnover data from a large number of establishments, both for internal operating purposes and for publication as part of their labor market information releases. The information was needed to aid in the resolution of complex wartime manpower problems, and its collection has been continued since that time because of its importance in planning, carrying out, and evaluating employment security programs. Turnover information is included in the bimonthly Labor Market Reports received by the EES from some 150 major labor market areas.

The new program, which is operated jointly by the two Bureaus and the State employment security agencies, will integrate these activities into a single program from which labor turnover rates will be available for local areas, States, and the Nation.

Arrangements for introducing the program have been made jointly by the BLS and the EES on a State-by-State basis. When the turnover program is instituted in a State, responsibility for data collection for all establishments in the current national sample for that State is transferred from BLS in Washington to the State

employment security agency. The BLS notifies employers in the sample that the State employment security agency has taken over the collection of turnover statistics. The following month, the State agency also notifies them of the new program, solicits their continued cooperation, and, in cases where the establishment is currently reporting labor turnover and other data to the State agency, explains the new collection arrangements.

The program has been introduced in some 25 States (including major areas within these States) during the year. At the outset, area samples are developed to include all manufacturing and mining establishments which employ 20 or more workers and were included either in the sample for the Current Employment Statistics Program or in the employment service "major market" group (larger firms accounting for about 75 percent of the employment in each local office area). Eventually, it is hoped to extend the program to cover all nonagricultural industries in all States and the major areas within the States.

Data are collected by the State employment security agencies on a shuttle schedule. The State agencies edit the schedules and compute and release turnover rates for the State and local areas. Individual establishment data are forwarded to BLS in Washington for the preparation and release of national turnover rates.

This extension of the labor turnover statistics program eventually will permit publication of national turnover rates in greater industrial detail and for those industries for which such information is not now available. At the same time, through the combined technical resources of the two Bureaus and the State agencies, improvement is expected in the national, State, local area, and individual establishment data on labor turnover. This expansion and improvement of labor turnover statistics should greatly enhance their value as economic indicators, as guides to employers, labor organizations and others interested in labor market problems, and as an essential tool in employment security administration.

# Employment Trends

## NONFARM EMPLOYMENT AND FACTORY PAY CONTINUE TO SET ALLTIME RECORDS IN OCTOBER 1956

A record number of 52.4 million workers were on nonfarm payrolls in October, 190,000 more than the alltime record set in September. Almost 1,250,000 more nonagricultural workers were employed this October than in the same month last year. Hourly and weekly earnings of factory production workers were also at an alltime high again this month, with the average factory worker earning \$2.02 per hour and \$82.01 a week.

Strong seasonal gains in retail trade and State and local government employment, and sharp increases stemming from large-scale production of 1957 automobiles, were the principal factors in the employment increase this month. Auto activity was also reflected in the primary metals, fabricated metals, and electrical machinery industries. Most other employment changes between September and October were seasonal.

## RETAIL TRADE EMPLOYMENT STRONG IN NONMANUFACTURING SECTOR

Employment in trade rose to a record level for this time of year, following a less than seasonal gain last month. The reopening of schools in late September and early October was mainly responsible for the job rise in State and local governments. Jobs in contract construction and in service industries showed the usual decline for this month.

## FACTORY JOBS UP; AUTO PRODUCTION CONTRIBUTES TO GAIN

Employment in manufacturing rose by 105,000 over the month to a level of 17.2 million, as automobile plants and their suppliers stepped up hiring. The transportation equipment industry reported an increase of 94,000, mainly in autos. Plants producing automotive castings and forgings contributed to an increase in the primary metals industry, and hirings in automotive hardware and stamping plants resulted in a very substantial job gain in the fabricated metals industry.

Most of the better than usual gain which boosted employment in the electrical machinery industry to an alltime high was attributable to increased activity in radio and television plants. Increased production of automotive electrical components and a return to work of strikers in

one large electrical equipment company also helped expand employment.

A slightly better than seasonal increase in the stone, clay, and glass industry reflected the ending of a work dispute in glass and pottery plants. A strike in household furniture plants, on the other hand, cut employment gains in the furniture industry. Employment continued weak in the lumber industry as orders for millwork and plywood slackened.

Employment in nondurable goods industries dropped less than usual for this month. Jobs in the food products industry remained at a high level in spite of the seasonal employment cut-back. A spurt in apparel plant hiring partially offset the poor employment showing of the past several months in this industry.

## FACTORY WORKWEEK DECLINES

The factory workweek declined by 0.1 hour from September to a level of 40.6 hours. This slight decline instead of the usual slight increase followed a better than seasonal gain last month. For most industries, the change in hours of work over the last 2 months was about seasonal. Hours in the lumber industry, which usually rise over this period, showed a decline and the rise in hours in the furniture industry was less than usual for this time of year. On the other hand, the gain in hours in the primary metals, fabricated metals, and transportation equipment industries was greater than usual.

At 40.6, hours were about at the postwar average for the October workweek, though considerably below last year's level of 41.1 hours.

All major industry groups except transportation equipment, ordnance, and printing reported shorter hours of work this October than October last year. Hours were longer this year in transportation equipment and ordnance, and in printing were equal to last year's level.

Average hours of overtime work put in by factory workers were substantially steady over the month at 3.0.

## FACTORY EARNINGS AT RECORD HIGH

Earnings of factory production workers rose to new highs this month, surpassing the records set last month. Weekly pay rose by 61 cents over the month to \$82.01, while hourly pay--which reached the \$2 level for the first time last month--rose to \$2.02.

Weekly earnings rose by more than \$1 over the month in textiles, transportation equipment, ordnance, miscellaneous manufacturing, and apparel, partly as a result of a longer workweek in those industries. On the other hand, shorter hours this month accounted for declines of more than \$1 in weekly pay in petroleum, rubber, tobacco, and food--all in the nondurable goods sector.

Increases in average hourly earnings were reported by most manufacturing industries, with the largest increases in transportation

equipment (due partly to escalator adjustments in aircraft workers' pay) and textiles (where region-wide wage increases were instituted by Southern textile mills). Only lumber, petroleum, and rubber reported a drop in average hourly earnings, resulting from sharp declines in premium-pay overtime work.

Every manufacturing industry except rubber reported a gain in weekly earnings of at least \$1 over October last year. Because of shorter hours of work this October, weekly pay in rubber was \$1.66 less than last year.

1/ Less than 0.05.

2/ Not available.

3/ Knit underwear - July 1956 data are: 3.7, 3.9, 2.5, 0.1, 1.2, and less than 0.05, respectively.

4/ Aircraft propellers and parts - June 1956 data are: 5.6, 1.8, 1.3, 0.1, 0.2, and 0.1, respectively.

5/ Data relate to domestic employees except messengers and those compensated entirely on a commission basis.

Table B-3: Monthly labor turnover rates of men and women in selected manufacturing industry groups 1/

Industry group	July 1956					
	Men (rate per 100 men)			Women (rate per 100 women)		
	Total accession	Separation		Total accession	Separation	
		Total	Quit		Total	Quit
<b>MANUFACTURING</b> .....	3.1	3.0	1.3	3.8	3.7	2.1
<b>DURABLE GOODS</b> .....	3.3	3.2	1.4	3.8	3.7	1.9
Ordnance and accessories.....	2.9	3.7	1.1	2.8	4.0	1.8
Lumber and wood products (except furniture)...	5.4	5.6	3.8	3.3	5.7	2.0
Furniture and fixtures.....	4.1	3.4	1.9	4.0	3.8	2.0
Stone, clay, and glass products.....	2.6	2.9	1.1	3.2	3.5	1.7
Primary metal industries.....	1.9	2.2	.9	2.7	2.8	1.6
Fabricated metal products (except ordnance, machinery, and transportation equipment).....	3.6	4.0	1.4	3.8	4.4	1.7
Machinery (except electrical).....	2.3	2.6	1.0	2.8	2.8	1.7
Electrical machinery.....	2.6	2.0	1.1	3.8	3.5	2.2
Transportation equipment.....	4.7	3.6	1.1	3.5	3.7	1.7
Instruments and related products.....	2.4	1.5	.9	3.2	2.7	1.7
Miscellaneous manufacturing industries.....	3.4	3.3	1.6	6.3	4.8	2.4
<b>NONDURABLE GOODS</b> .....	2.7	2.6	1.2	3.9	3.7	2.2
Food and kindred products.....	3.9	3.6	1.2	5.5	4.6	2.1
Tobacco manufactures.....	2.7	1.8	1.0	2.5	2.8	1.9
Textile-mill products.....	3.0	3.3	1.8	3.3	3.6	1.9
Apparel and other finished textile products...	3.1	3.6	1.9	3.6	3.9	2.7
Paper and allied products.....	2.4	2.0	1.1	4.2	3.2	2.1
Chemicals and allied products.....	1.5	1.1	.6	3.7	3.1	1.8
Products of petroleum and coal.....	1.0	1.0	.4	4.1	1.9	1.6
Rubber products.....	2.2	1.7	.9	3.4	3.0	1.4
Leather and leather products.....	3.4	3.8	2.0	4.6	3.6	2.4

1/ These figures are based on a slightly smaller sample than those in tables B-1 and B-2, inasmuch as some firms do not report separate data for women.

Luggage.....	\$63.52	\$62.64	\$61.85	39.7	39.9	39.9	\$1.60	\$1.57	\$1.55
Handbags and small leather goods.....	51.75	51.68	49.02	37.5	38.0	38.0	1.38	1.36	1.29
Gloves and miscellaneous leather goods...	49.58	49.74	46.00	37.0	37.4	37.1	1.34	1.33	1.24
<b>STONE, CLAY, AND GLASS PRODUCTS.....</b>									
Flat glass.....	111.65	110.02	115.45	41.2	40.9	42.6	2.71	2.69	2.71
Glass and glassware, pressed or blown....	77.57	78.79	75.62	38.4	39.2	39.8	2.02	2.01	1.90
Glass containers.....	76.91	80.94	76.02	37.7	39.1	39.8	2.04	2.07	1.91
Pressed and blown glass.....	78.61	76.04	74.64	39.5	39.4	39.7	1.99	1.93	1.88
Glass products made of purchased glass...	68.34	68.51	66.82	40.2	40.3	41.5	1.70	1.70	1.61
Cement, hydraulic.....	90.53	86.74	82.76	42.5	41.5	41.8	2.13	2.09	1.96
Structural clay products.....	74.21	74.16	71.55	41.0	41.2	41.6	1.81	1.80	1.72
Brick and hollow tile.....	70.81	71.40	70.52	41.9	42.5	43.8	1.69	1.68	1.61
Floor and wall tile.....	74.15	75.36	68.90	40.3	40.3	39.6	1.84	1.87	1.74
Sewer pipe.....	76.36	75.30	71.98	41.5	40.7	40.9	1.84	1.85	1.76
Clay refractories.....	79.31	78.56	77.37	38.5	38.7	38.3	2.06	2.03	2.02
Pottery and related products.....	72.58	71.25	66.55	38.2	37.9	37.6	1.90	1.88	1.77
Concrete, gypsum, and plaster products...	83.08	83.72	81.17	45.4	45.5	45.6	1.83	1.84	1.78
Concrete products.....	80.96	81.70	78.83	46.0	45.9	46.1	1.76	1.78	1.71
Cut-stone and stone products.....	69.77	70.35	69.93	40.8	40.9	42.9	1.71	1.72	1.63
Miscellaneous nonmetallic mineral products.....	84.66	82.01	83.80	40.9	40.4	41.9	2.07	2.03	2.00
Abrasive products.....	85.50	85.75	87.97	38.0	38.8	41.3	2.25	2.21	2.13
Asbestos products.....	87.15	87.78	87.60	42.1	42.2	43.8	2.07	2.08	2.00
Nonclay refractories.....	91.80	83.98	92.27	39.4	38.0	39.6	2.33	2.21	2.33
<b>PRIMARY METAL INDUSTRIES.....</b>									
Blast furnaces, steel works, and rolling mills.....	106.04	97.14	103.91	41.1	38.7	41.4	2.58	2.51	2.51
Blast furnaces, steel works, and rolling mills, except electrometallurgical products.....	106.45	97.52	104.33	41.1	38.7	41.4	2.59	2.52	2.52
Electrometallurgical products.....	88.31	88.80	88.37	39.6	40.0	41.1	2.23	2.22	2.15
Iron and steel foundries.....	87.54	86.30	86.51	41.1	40.9	42.2	2.13	2.11	2.05
Gray-iron foundries.....	84.25	83.84	85.45	40.7	40.7	42.3	2.07	2.06	2.02
Malleable-iron foundries.....	86.50	82.80	84.65	40.8	40.0	41.7	2.12	2.07	2.03
Steel foundries.....	95.99	92.99	91.15	42.1	41.7	42.2	2.28	2.23	2.16
Primary smelting and refining of nonferrous metals.....	94.85	91.39	89.62	41.6	40.8	41.3	2.28	2.24	2.17
Primary smelting and refining of copper, lead, and zinc.....	92.82	90.47	87.57	42.0	41.5	41.7	2.21	2.18	2.10
Primary refining of aluminum.....	99.14	93.17	92.06	40.8	38.5	40.2	2.43	2.42	2.29
Secondary smelting and refining of nonferrous metals.....	87.36	86.52	86.13	41.8	42.0	43.5	2.09	2.06	1.98
Rolling, drawing and alloying of nonferrous metals.....	94.81	89.78	92.21	41.4	39.9	42.3	2.29	2.25	2.18
Rolling, drawing, and alloying of copper.....	94.69	90.58	96.14	41.9	40.8	43.9	2.26	2.22	2.19
Rolling, drawing, and alloying of aluminum.....	94.83	87.86	88.91	40.7	38.2	40.6	2.33	2.30	2.19
Nonferrous foundries.....	91.69	89.57	87.56	41.3	40.9	41.3	2.22	2.19	2.12
Miscellaneous primary metal industries...	97.82	96.12	99.96	41.1	40.9	42.9	2.38	2.35	2.33
Iron and steel forgings.....	102.66	101.02	104.30	40.9	40.9	42.4	2.51	2.47	2.46
Wire drawing.....	95.91	94.39	98.29	41.7	41.4	43.3	2.30	2.28	2.27
Welded and heavy-riveted pipe.....	95.47	93.32	94.16	40.8	40.4	41.3	2.34	2.31	2.28

1/ Not available.

2/ Data relate to employees in such occupations in the telephone industry as switchboard operators; service assistants; operating room instructors; and pay-station attendants. During 1955 such employees made up 41 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

3/ Data relate to employees in such occupations in the telephone industry as central office craftsmen; installation and exchange repair craftsmen; line, cable, and conduit craftsmen; and laborers. During 1955 such employees made up 26 percent of the total number of nonsupervisory employees in telephone establishments reporting hours and earnings data.

4/ Data relate to domestic employees except messengers and those compensated entirely on a commission basis.

5/ Money payments only; additional value of board, room, uniforms, and tips, not included.

**Table C-2: Gross average weekly earnings of production workers in selected industries, in current and 1947-49 dollars**

<sup>1/</sup> Aggregate man-hours are for the weekly pay period ending nearest the 15th of the month and do not represent totals for the month. For mining and manufacturing industries, data refer to production and related workers. For contract construction, the data relate to construction workers.

<sup>2/</sup> Includes only the divisions shown.

# Explanatory Notes

## INTRODUCTION

The statistics for nonfarm industries presented in this monthly report are part of the broad program of the Bureau of Labor Statistics to provide timely, comprehensive, accurate, and detailed information for the use of businessmen, government officials, legislators, labor unions, research workers, and the general public. The statistics are an integral part of the Federal statistical system, and are considered basic indicators of the state of the Nation's economy. They are widely used in following and interpreting business developments and in making decisions in such fields as labor-management negotiations, marketing, personnel, plant location, and government policy. In addition, Government agencies use the data in this report to compile official indexes of production, labor productivity, and national income.

## ESTABLISHMENT REPORTS:

### a. Collection

The employment statistics program, which is based on establishment payroll reports, provides current data for both full- and part-time workers on payrolls of nonagricultural establishments (see glossary for definition, p. 7-E) during a specified period each month. The BLS uses two "shuttle" schedules for this program, the BLS Form 790 (for employment, payroll, and man-hours data) and the Form 1219 (for labor turnover data). The shuttle schedule, used by BLS for more than 25 years, is designed to assist firms to report consistently, accurately, and with a minimum of cost. The questionnaire provides space for the establishment to report for each month of the current calendar year; in this way, the employer uses the same schedule for the entire year.

Under a cooperative arrangement with the BLS, State agencies mail the forms to the establishments and examine the returns for consistency, accuracy, and completeness. The States use the information to prepare State and area series and then send the data to the BLS Division of Manpower and Employment Statistics for use in preparing the national series.

### b. Industrial Classification

Establishments are classified into industries on the basis of their principal product or activity determined from information on annual sales volume. This information is collected each year. For manufacturing establishments, a product supplement to the monthly 790 report is used. The supplement provides for reporting the percentage of total sales represented by each product. Information for nonmanufacturing establishments is collected on the 790 form itself. In the case of an establishment making more than one product

or engaging in more than one activity, the entire employment of the unit is included under the industry indicated by the most important product or activity. The titles and descriptions of industries presented in the Standard Industrial Classification Manual, (U. S. Bureau of the Budget, Washington, D. C.) are used for classifying reports from manufacturing and government establishments; the 1942 Industrial Classification Code, (U. S. Social Security Board) for reports from all other establishments.

### c. Coverage

Monthly reports on employment and, for most industries, payroll and man-hours are obtained from approximately 155,000 establishments. (See table below.) The table also shows the approximate proportion of total employment in each industry division covered by the group of establishments furnishing monthly employment data. The coverage for individual industries within the division may vary from the proportions shown.

Approximate size and coverage of BLS employment and payrolls sample 1/

Division or industry	Number of establishments in sample	Employees	
		Number in sample	Percent of total
Mining.....	3,100	350,000	45
Contract construction..	20,900	735,000	24
Manufacturing.....	40,400	10,980,000	65
Transportation and public utilities:			
Interstate railroads (ICC).....	---	1,128,000	95
Other transportation and public utilities.	14,600	1,581,000	57
Wholesale and retail trade.....	58,300	1,928,000	18
Finance, insurance, and real estate.....	12,000	693,000	31
Service and miscellaneous:			
Hotels and lodging places.....	1,200	144,000	37
Personal services:			
Laundries and cleaning and dyeing plants.....	2,300	94,000	19
Government:			
Federal (Civil Service Commission).....	---	2,162,000	100
State and local.....	4,400	2,033,000	41

1/ Some firms do not report payroll and man-hour information. Therefore, hours and earnings estimates may be based on a slightly smaller sample than employment estimates.

Labor turnover reports are received from approximately 10,000 cooperating establishments in the manufacturing, mining, and communication industries (see table below). The definition of manufacturing used in the turnover series is not as extensive as in the BLS series on employment and hours and earnings because of the exclusion of the following major industries from the labor turnover sample: printing, publishing, and allied industries (since April 1943); canning and preserving fruits, vegetables, and sea foods; women's and misses' outerwear; and fertilizer.

Approximate size and coverage of  
BLS labor turnover sample

1/ Does not apply.

## DEFINITIONS AND ESTIMATING METHODS:

### A. EMPLOYMENT

#### Definition

Employment data for all except Federal Government establishments refer to persons who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. For Federal Government establishments current data generally refer to persons who worked on, or received pay for, the last day of the month.

Persons on an establishment payroll who are on paid sick leave, paid holiday, or paid vacation, or who work during a part of the specified pay period and are unemployed or on strike during the other part of the period are counted as employed. Persons are not considered employed who are laid off or are on leave without pay, who are on strike for the entire period, or who are hired but do not report to work during the period. Proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households are also excluded. Government employment covers only civilian employees; Federal military personnel are shown separately, but their number is excluded from total nonagricultural employment.

With respect to employment in educational institutions (private and governmental), BLS considers regular full-time teachers to be employed during the summer vacation period whether or not they are specifically paid in those months.

#### Benchmark Data

Employment estimates are periodically compared with complete counts of employment in the various nonagri-

cultural industries, and appropriate adjustments made as indicated by the total counts or benchmarks. The comparison made for the first 3 months of 1955 resulted in changes amounting to 0.8 percent of all nonagricultural employment. Among the eight major industry divisions changes ranged from 0.2 to 2.3 percent, with the exception of contract construction which required an adjustment of 6.2 percent. As a result, the estimating techniques for contract construction were reviewed in detail and certain refinements have been introduced. Manufacturing industries as a whole were changed by 0.2 percent, a slightly smaller amount than necessary in 1954. Within manufacturing, 43 of the 132 individual industries required no adjustment because the estimate and benchmark differed by less than 1.0 percent or less than 500 and 78 were adjusted by 1.0-4.9 percent. One significant cause of differences between the benchmark and estimate is the change in industrial classification of individual firms, which cannot be reflected in BLS estimates until they are adjusted to new benchmarks. Other causes are sampling and response errors.

The basic sources of benchmark information are the quarterly tabulations of employment data, by industry, compiled by State agencies from reports of establishments covered under State unemployment insurance laws. Supplementary tabulations prepared by the U. S. Bureau of Old Age and Survivors Insurance are used for the group of establishments exempt from State unemployment insurance laws because of their small size. Benchmarks for industries wholly or partly excluded from the unemployment insurance laws are derived from a variety of other sources.

The BLS estimates which are prepared for the benchmark quarter are compared with the new benchmark levels, industry by industry. Where revisions are necessary, the monthly estimates are adjusted between the new benchmark and the preceding one. Following revision for these intermediate periods, the industry data from the most recent benchmark are projected to the current month by use of the sample trends. Under this procedure, the benchmark is used to establish the level of employment while the sample is used to measure the month-to-month changes in the level.

#### Estimating Method

The estimating procedure for industries for which data on both "all employees" and "production and related workers" are published (manufacturing and selected mining industries) is outlined below; the first step under this method is also used for industries for which only figures on "all employees" are published.

The first step is to compute total employment (all employees) in the industry for the month following the benchmark period. The all-employee total for the last benchmark month (e.g., March) is multiplied by the percent change of total employment over the month for the group of establishments reporting for both March and April. Thus, if firms in the BLS sample for an industry report 30,000 employees in March and 31,200 in April, April employment is 104 percent (31,200 divided by 30,000) of March employment. If the all-employee benchmark in March is 40,000, the all-employee total in April would be 104 percent of 40,000 or 41,600.

The second step is to compute the production-worker total for the industry. The all-employee total for the month is multiplied by the ratio of production

workers to all employees. This ratio is computed from establishment reports in the monthly sample. Thus, if these firms in April report 24,960 production workers and a total of 31,200 employees, the ratio of production workers to all employees would be .80 (24,960 divided by 31,200). The production-worker total in April would be 33,280 (41,600 multiplied by .80).

Figures for subsequent months are computed by carrying forward the totals for the previous month according to the method described above.

The number of women employees in manufacturing, published quarterly, is computed by multiplying the all-employee estimate for the industry by the ratio of women to all employees as reported in the industry sample.

#### Employment Adjusted for Seasonal Variation

Employment series for many industries reflect a regularly recurring seasonal movement which can be measured on the basis of past experience. By eliminating that part of the change in employment which can be ascribed to usual seasonal variation, it is possible to clarify the cyclical and other nonseasonal movements in the series. Adjusted employment aggregates are shown and also indexes (1947-49 = 100) derived from these aggregates. The indexes have the additional advantage of comparing the current seasonally adjusted employment level with average employment in the base period.

#### Comparability with Other Employment Estimates

Employment data published by other government and private agencies may differ from BLS employment statistics because of differences in definition, sources of information, methods of collection, classification, and estimation. BLS monthly figures are not directly comparable, for example, with the estimates of the Census Monthly Report on the Labor Force (MRLF). Census data are obtained by personal interviews with individual members of a small sample of households and are designed to provide information on the work status of the whole population, classified by their demographic characteristics. The BLS, on the other hand, obtains data by mail questionnaire which are based on the payroll records of business units, and prepares detailed statistics on the industrial and geographic distribution of employment and on hours of work and earnings.

Since BLS employment figures are derived from establishment payroll records, persons who worked in more than one establishment during the reporting period will be counted more than once in the BLS series. By definition, proprietors, self-employed persons, domestic servants, and unpaid family workers are excluded from the BLS but not the MRLF series.

Employment estimates compiled by the Bureau of the Census from its censuses and/or annual sample surveys of manufacturing establishments also differ from BLS employment statistics. Among the important reasons for lack of comparability are differences in industries covered, in the business units considered parts of an establishment, and in the industrial classification of establishments. Similar differences exist between the BLS data and those in County Business Patterns published jointly by the U.S. Department of Commerce and the U.S. Department of Health, Education and Welfare.

## B. LABOR TURNOVER

### Definition

"Labor turnover," as used in the BLS program, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms during a calendar month. This movement is subdivided into two broad types: accessions (new hires and rehires) and separations (terminations of employment initiated by either employer or employee). Each type of action is cumulated for a calendar month and expressed as a rate per 100 employees. All employees, including executive, office, sales, other salaried personnel, and production workers are covered by both the turnover movements and the employment base used in computing labor turnover rates. All groups of employees--full- and part-time, permanent, and temporary--are included. Transfers from one establishment to another within a company are not considered to be turnover items.

### Method of Computation

To compute turnover rates for individual industries, the total number of each type of action (accessions, quits, etc.) reported for a calendar month by the sample establishments in each industry is first divided by the total number of employees reported by these establishments, who worked during, or received pay for, any part of the pay period ending nearest the 15th of that month. The result is multiplied by 100 to obtain the turnover rate.

For example, in an industry sample, the total number of employees who worked during, or received pay for, the week of January 12-18 was reported as 25,498. During the period January 1-31 a total of 284 employees in all reporting firms quit. The quit rate for the industry is:

$$\frac{284}{25,498} \times 100 = 1.1$$

To compute turnover rates for broader industrial categories, the rates for the component industries are weighted by the estimated employment.

Separate turnover rates for men and women are published quarterly for 1 month in each quarter. Only accessions, quits, and total separations are published. These rates are computed in the same manner as the all-employee rates; for example, the quit rate for women is obtained from an industry sample by dividing the number of women who quit during the month by the number of women employees reported.

Average monthly turnover rates for the year for all employees are computed by dividing the sum of the monthly rates by 12.

### Comparability with Earlier Data

Labor turnover rates are available on a comparable basis from January 1930 for manufacturing as a whole and from 1943 for two coal mining and two communication industries. Rates for many individual industries and industry groups for the period prior to January 1950 are not comparable with those for the subsequent period because of a revision which involved (1) the adoption of the Standard Industrial Classification (1945) code structure for manufacturing industries, and (2) the introduction of weighting

in the computation of industry-group rates.

#### Comparability with Employment Series

Month-to-month changes in total employment in manufacturing industries reflected by labor turnover rates are not comparable with the changes shown in the Bureau's employment series for the following reasons:

- (1) Accessions and separations are computed for the entire calendar-month; the employment reports, for the most part, refer to a 1-week pay period ending nearest the 15th of the month.
- (2) The turnover sample excludes certain industries (see under coverage, p. 2-E).
- (3) Plants on strike are not included in the turnover computations beginning with the month the strike starts through the month the workers return; the influence of such stoppages is reflected, however, in the employment figures.

#### C. HOURS AND EARNINGS

Definitions of production workers, nonsupervisory employees, payrolls, and man-hours from which hours and earnings data are derived are included in the glossary, page 7-E. Methods used to compute hours and earnings averages are described in summary of methods for computing national statistics, page 6-E.

#### Gross Average Hourly and Weekly Earnings

Average hourly earnings for manufacturing and non-manufacturing industries are on a "gross" basis, i.e., they reflect not only changes in basic hourly and incentive wage rates, but also such variable factors as premium pay for overtime and late-shift work, and changes in output of workers paid on an incentive basis. Employment shifts between relatively high-paid and low-paid work and changes in workers' earnings in individual establishments also affect the general earnings averages. Averages for groups and divisions further reflect changes in average hourly earnings for individual industries.

Averages of hourly earnings differ from wage rates. Earnings refer to the actual return to the worker for a stated period of time; rates are the amounts stipulated for a given unit of work or time. However, the average earnings series does not measure the level of total labor costs on the part of the employer, since the following are excluded: irregular bonuses, retroactive items, payments of various welfare benefits, payroll taxes paid by employers, and earnings for those employees not covered under the production-worker or nonsupervisory-employee definitions.

Gross average weekly earnings are affected not only by changes in gross average hourly earnings, but also by changes in the length of the workweek, part-time work, stoppages for varying causes, labor turnover, and absenteeism.

#### Average Weekly Hours

The workweek information relates to average hours worked or paid for, and is somewhat different from standard or scheduled hours. Normally, such factors

as absenteeism, labor turnover, part-time work, and stoppages cause average weekly hours to be lower than scheduled hours of work for an establishments. Group averages further reflect changes in the workweek of component industries.

#### Average Overtime Hours

The overtime hours represent that portion of the gross average weekly hours which were in excess of regular hours and for which premium payments were made. If an employee works on a paid holiday at regular rates, receiving as total compensation his holiday pay plus straight-time pay for hours worked that day, no overtime hours would be reported.

Since overtime hours are premium hours by definition, the gross weekly hours and overtime hours do not necessarily move in the same direction from month to month; for example, premiums may be paid for hours in excess of the straight-time workday although less than a full week is worked. Diverse trends on the industry-group level may also be caused by a marked change in gross hours for a component industry where little or no overtime was worked in both the previous and current months. In addition, such factors as stoppages, absenteeism, and labor turnover may not have the same influence on overtime hours as on gross hours.

#### Gross Average Weekly Earnings in Current and 1947-49 Dollars

These series indicate changes in the level of weekly earnings before and after adjustment for changes in purchasing power as determined from the BLS Consumer Price Index.

#### Net Spendable Average Weekly Earnings

Net spendable average weekly earnings in current dollars are obtained by deducting Federal social security and income taxes from gross weekly earnings. The amount of income tax liability depends on the number of dependents supported by the worker, as well as on the level of his gross income. To reflect these variables, net spendable earnings have been computed for two types of income receivers: (1) a worker with no dependents; and (2) a worker with three dependents.

The computations of net spendable earnings for both the factory worker with no dependents and the factory worker with three dependents are based upon the gross average weekly earnings for all production workers in manufacturing industries without regard to marital status, family composition, and total family income.

Net spendable weekly earnings in 1947-49 dollars represent an approximate measure of changes in "real" net spendable weekly earnings. "Real" earnings are computed by dividing the current Consumer Price Index into the spendable earnings average for the current month. The resulting level of spendable earnings expressed in 1947-49 dollars is thus adjusted for changes in purchasing power since that base period.

### Average Hourly Earnings, Excluding Overtime, of Production Workers in Manufacturing Industries

These data are based on the application of adjustment factors to gross average hourly earnings (as described in the Monthly Labor Review, May 1950, pp. 537-540; reprint available, Serial No. R. 2020). This method eliminates only the earnings due to overtime paid for at one and one-half times the straight-time rates after 40 hours a week. Thus, no adjustment is made for other premium-payment provisions—for example, holiday work, late-shift work, and overtime rates other than time and one-half.

### Indexes of Aggregate Weekly Man-Hours

The indexes of aggregate weekly man-hours are prepared by dividing the current month's aggregate by the monthly average for the 1947-49 period. These aggregates represent the product of average weekly hours and employment.

The aggregate man-hours are defined as total man-hours for which pay was received by full- and part-time production or construction workers, including hours paid for holidays, sick leave, and vacations taken. The man-hours are for 1 week of the pay period ending nearest the 15th of the month, and may not be typical of the entire month.

### Railroad Hours and Earnings

The figures for Class I railroads (excluding switching and terminal companies) are based upon monthly data summarized in the M-300 report of the Interstate Commerce Commission and relate to all employees who received pay during the month, except executives,

officials, and staff assistants (ICC Group I). Gross average hourly earnings are computed by dividing total compensation by total hours paid for. Average weekly hours are obtained by dividing the total number of hours paid for, reduced to a weekly basis, by the number of employees, as defined above. Gross average weekly earnings are derived by multiplying average weekly hours by average hourly earnings. Because hours and earnings data for manufacturing and other nonmanufacturing industries are based upon reports to the BLS which generally represent 1 weekly pay period ending nearest the 15th of the month, the data for railroad employees are not strictly comparable with other industry information shown in this publication.

## **STATISTICS FOR STATES AND AREAS**

State and area employment, hours, and earnings statistics are collected and prepared by State agencies in cooperation with the BLS. These statistics are based on the same establishment reports used by the BLS for preparing national estimates. State employment series are adjusted to benchmark data from State unemployment insurance agencies and the Bureau of Old Age and Survivors Insurance. Because some States have more recent benchmarks than others and use slightly varying methods of computation, the sum of the State figures may differ slightly from the official U. S. totals prepared by the BLS.

Additional industry detail may be obtainable from the cooperating State agencies listed on the inside back cover of this report.

NOTE: Additional information concerning the preparation of the employment, hours, earnings, and labor turnover series---concepts and scope, survey methods, and reliability and limitations---is contained in technical notes for each of these series, available from BLS free of charge. For all of this information as well as similar material for other BLS statistics, see Techniques of Preparing Major BLS Statistical Series, BLS Bull. 1168, December 1954. Copies are on file in many public and university libraries, or may be ordered from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. at 65 cents each.

# SUMMARY OF METHODS FOR COMPUTING NATIONAL STATISTICS

## EMPLOYMENT, HOURS, AND EARNINGS

Item	Individual manufacturing and nonmanufacturing industries	Total nonagricultural divisions, major groups, and groups
<b>MONTHLY DATA</b>		
<u>All employees</u>	All-employee estimate for previous month multiplied by ratio of all employees in current month to all employees in previous month for sample establishments which reported for both months.	Sum of all-employee estimates for component industries.
<u>Production workers</u>	All-employee estimate for current month multiplied by ratio of production workers to all employees in sample establishments for current month.	Sum of production-worker estimates for component industries.
<u>Average weekly hours</u>	Total production or nonsupervisory man-hours divided by number of production or nonsupervisory workers.	Average, weighted by employment, of the average weekly hours for component industries.
<u>Average hourly earnings</u>	Total production or nonsupervisory worker payroll divided by total production or nonsupervisory worker man-hours.	Average, weighted by aggregate man-hours, of the average hourly earnings for component industries.
<u>Average weekly earnings</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.
<b>ANNUAL AVERAGE DATA</b>		
<u>All employees and production workers</u>	Sum of monthly estimates divided by 12.	Sum of monthly estimates divided by 12.
<u>Average weekly hours</u>	Annual total of aggregate man-hours (employment multiplied by average weekly hours) divided by annual sum of employment.	Average, weighted by employment, of the annual averages of weekly hours for component industries.
<u>Average hourly earnings</u>	Annual total of aggregate payrolls (weekly earnings multiplied by employment) divided by annual aggregate man-hours.	Average, weighted by aggregate man-hours, of the annual averages of hourly earnings for component industries.
<u>Average weekly earnings</u>	Product of average weekly hours and average hourly earnings.	Product of average weekly hours and average hourly earnings.

## GLOSSARY

**ALL EMPLOYEES** - The total number of persons on establishment payrolls who worked full- or part-time or received pay for any part of the pay period ending nearest the 15th of the month. Includes salaried officers of corporations as well as employees on the establishment payroll engaged in new construction and major additions or alterations to the plant who are utilized as a separate work force (force-account construction workers). Proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces are excluded.

**CONSTRUCTION WORKERS** - Includes working foremen, journeymen, mechanics, apprentices, helpers, laborers, and similar workers engaged in new work, alterations, demolition, and other actual construction work, at the site of construction or working in shop or yard at jobs (such as precutting and pre-assembling) ordinarily performed by members of the construction trades; includes all such workers regardless of skill, engaged in any way in contract construction activities.

**CONTRACT CONSTRUCTION** - Covers only firms engaged in the construction business on a contract basis for others. Force-account construction workers, i.e., hired directly by and on the payroll of Federal, State, and local government, public utilities, and private establishments, are excluded from contract construction and included in the employment for such establishments.

**DURABLE GOODS** - The durable-goods subdivision includes the following major manufacturing industry groups: ordnance and accessories; lumber and wood products; furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated metal products; machinery; electrical machinery; transportation equipment; instruments and related products; and miscellaneous manufacturing industries as defined. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

**ESTABLISHMENT** - "A single physical location where business is conducted or where services or industrial operations are performed; for example, a factory, mill, store, mine, or farm. Where a single physical location comprises two or more units which maintain separate payroll and inventory records and which are engaged in distinct or separate activities for which different industry classifications are provided in the Standard Industrial Classification, each unit shall be treated as a separate establishment. An establishment is not necessarily identical with the business concern or firm which may consist of one or more establishments. It is also to be distinguished from organizational subunits, departments, or divisions within an establishment." (Standard Industrial Classification Manual, U. S. Bureau of the Budget, Vol. I, Part I, p. 1, November 1945.)

**FINANCE, INSURANCE, AND REAL ESTATE** - Covers private establishments operating in the fields of finance (banks, security dealers, loan agencies, holding companies, and other finance agencies); insurance (insurance carriers and independent agents and brokers); and real estate (real estate owners, including

speculative builders, subdividers, and developers; and agents and brokers).

**GOVERNMENT** - Covers Federal, State, and local government establishments performing legislative, executive, and judicial functions, including Government corporations, Government force-account construction, and such units as arsenals, navy yards, and hospitals. Federal government employment excludes employees of the Central Intelligence Agency. State and local government employment includes teachers, but excludes, as nominal employees, paid volunteer firemen and elected officials of small local units.

### LABOR TURNOVER:

Separations are terminations of employment during the calendar month and are classified according to cause: quits, discharges, layoffs, and miscellaneous separations (including military), as defined below.

Quits are terminations of employment during the calendar month initiated by employees for such reasons as: acceptance of a job in another company, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement where no company pension is provided. Failure to report after being hired and unauthorized absences of more than 7 consecutive calendar days are also classified as quits. Prior to 1940, miscellaneous separations were also included in this category.

Discharges are terminations of employment during the calendar month initiated by the employer for such reasons as employees' incompetence, violation of rules, dishonesty, insubordination, laziness, habitual absenteeism, or inability to meet physical standards.

Layoffs are terminations of employment during the calendar month lasting or expected to last more than 7 consecutive calendar days without pay, initiated by the employer without prejudice to the worker, for such reasons as lack of orders or materials, release of temporary help, conversion of plant, introduction of labor-saving machinery or processes, or suspensions of operations without pay during inventory periods.

Miscellaneous separations (including military) are terminations of employment during the calendar month because of permanent disability, death, retirement on company pension, and entrance into the Armed Forces expected to last more than 30 consecutive calendar days. Prior to 1940, miscellaneous separations were included with quits. Beginning September 1940, military separations were included here.

Persons on leave of absence (paid or unpaid) with the approval of the employer are not counted as separations until such time as it is definitely determined that such persons will not return to work. At that time, a separation is reported as one of the above types, depending on the circumstances.

Accessions are the total number of permanent and temporary additions to the employment roll during the calendar month, including both new and rehired employees. Persons returning to work after a layoff, military separations, or other absences who have been counted as separations are considered accessions.

**MAN-HOURS** - Covers man-hours worked or paid for of specified groups of workers, during the pay period ending nearest the 15th of the month. The specified group of workers in manufacturing and mining industries, laundries, and cleaning and dyeing plants is production and related workers; in the contract construction industry, it is construction workers; and in the other industries, it is nonsupervisory employees. The man-hours include hours paid for holidays, sick leave, and vacations taken; if the employee elects to work during a vacation period, the vacation pay and the hours it represents are omitted.

**MANUFACTURING** - Covers private establishments engaged in the mechanical or chemical transformation of inorganic or organic substances into new products and usually described as plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment. Establishments engaged in assembling component parts of manufactured products are also considered manufacturing if the new product is neither a structure nor other fixed improvement. Government manufacturing operations such as arsenals and navy yards are excluded from manufacturing and are included under Government.

**MINING** - Covers establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; includes various contract services required in mining operations, such as removal of overburden, tunneling and shafting, and the drilling or acidizing of oil wells; also includes ore dressing, beneficiating, and concentration.

**NONDURABLE GOODS** - The nondurable-goods subdivision includes the following major manufacturing industry groups: food and kindred products; tobacco manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; printing, publishing, and allied industries; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products. This definition is consistent with that used by other Federal agencies, e.g., Federal Reserve Board.

**NONSUPERVISORY EMPLOYEES** - Includes employees (not above the working supervisory level) such as office and clerical workers, repairmen, salespersons, operators, drivers, attendants, service employees, linemen, laborers, janitors, watchmen, and similar occupational levels, and other employees whose services are closely associated with those of the employees listed.

**OVERTIME HOURS** - Covers premium overtime hours of production and related workers during the pay period ending nearest the 15th of the month. Overtime hours are those for which premiums were paid because the hours were in excess of the number of hours of either the straight-time workday or workweek. Weekend and holiday hours are included only if premium wage rates were paid. Hours for which only shift differential, hazard, incentive or other similar types of premiums were paid are excluded.

**PAYROLL** - The weekly payroll for the specified groups

of full- and part-time employees who worked during, or received pay for, any part of the pay period ending nearest the 15th of the month. The specified group of employees in the manufacturing and mining industries, laundries, and cleaning and dyeing plants is production and related workers; in the contract construction industry, it is construction workers; and in the other industries, it is nonsupervisory employees and working supervisors. The payroll is reported before deductions for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues; also includes pay for sick leave, holidays, and vacations taken. Excludes cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, and bonuses, unless earned and paid regularly each pay period.

**PRODUCTION AND RELATED WORKERS** - Includes working foremen and all nonsupervisory workers (including lead men and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping, maintenance, repair, janitorial, watchman services, products development, auxiliary production for plant's own use (e.g., power plant), and recordkeeping and other services closely associated with the above production operations.

**REGIONS:**

**North** - Includes all States except the 17 listed as South.

**South** - Includes the following 17 States: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

(In the case of sawmills and planing mills, general, a third region is identified - the West - and includes California, Oregon, and Washington.)

**SERVICE AND MISCELLANEOUS** - Covers establishments primarily engaged in rendering services to individuals and business firms, including automotive repair services. Excludes domestic service workers. Non-government schools, hospitals, museums, etc., are included under service and miscellaneous; similar Government establishments are included under Government.

**TRANSPORTATION AND PUBLIC UTILITIES** - Covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services or providing electricity, gas, steam, water, or sanitary service. Similar Government establishments are included under Government.

**WHOLESALE AND RETAIL TRADE** - Covers establishments engaged in wholesale trade, i.e., selling merchandise to retailers, and in retail trade, i.e., selling merchandise for personal or household consumption, and rendering service incidental to the sales of goods. Similar Government establishments are included under Government.
