America's Changing Job Sources.....	iii
-------------------------------------	-----

CHANGING JOB SOURCES...

There has been considerable comment recently concerning America's industrial shift from a predominantly goods-producing to a predominantly service-type economy. An article beginning on page iii discusses the changing proportions of employment among the eight nonfarm industry divisions and shows that today's changing relationships are a continuation of developments going back as far as World War I.

America's Changing Job Sources

Rudolph C. Mendelsohn

Since World War I, powerful underlying economic forces, obscured by dynamic, transient events of war and depression, have slowly reshaped the Nation's basic employment picture.

Employment of persons working for wages and salaries,¹ apart from hired hands in agriculture, about doubled from 26.8 million workers in 1919 to 51.9 million in 1956. Within the total figures, the relative importance of America's major job sources shifted among industries. The proportion of wage and salary workers in two industry divisions—the transportation and public utilities division and the mining division—has declined sharply, while the share of jobs in the service and trade lines has increased. The trend of government employment as a percentage of total employment was stable in the 1919-29 decade, increased sharply in the next 3 years, and then remained essentially stable for the next 25 years. From one viewpoint, the long-run proportions of wage and salary workers in finance, construction, and manufacturing appear to be unchanged in the 38-year period. A closer look, however, suggests that they, too, have changed: The proportion of all nonfarm wage and salary workers employed in manufacturing declined while the proportion employed in construction increased sharply and moderate gains were made in the finance, insurance, and real-estate division.

Employment data on which these conclusions were based did not include hired agricultural workers. Examination of available data on such workers reveals that their omission does not modify the findings regarding the changing relationship of job opportunities among industries. Because employment of

hired hands in agriculture is a relatively small part of total employment, declining from 3.3 million in 1919 to 1.9 million in 1956 according to the U. S. Department of Agriculture, inclusion of hired farmhands has little effect on industry relationships: The proportionate change is somewhat greater for industries with increasing shares of total employment and slightly smaller for those with declining shares of job opportunities.

A change in the percentage of the total represented by any one industry may be an arithmetic reflection of developments in other industries without any necessary direct economic connection to the particular industry. For example, an industry with stable actual employment levels would acquire an increasing share of jobs when the sum of employment in other industries falls; conversely, that industry's relative share of job opportunities would fall when the sum of employment in all other industries rises. These shifts, nevertheless, represent an alteration in the structure of the Nation's job market brought about by common underlying factors: Technological change, increased productivity, new markets, new products, and new services. Dramatic technological advances have made possible enormously increased production of goods with comparatively modest increases in employment, and rising real incomes have created increased demand for the services afforded by workers in other sectors of the economy.

¹Excludes proprietors, self-employed persons, domestic servants, and unpaid family workers.

Transportation and Public Utilities and Mining

Among major nonagricultural industries, two—mining and transportation and public utilities—have shown significantly declining trends² in relative importance since 1919, with mining, alone among all major industries, sustaining an absolute decrease as well. In 1919, an average of 1.1 million workers were employed in mining; by 1956, the figure had fallen to 0.8 million.

Chart 1.

The relative importance of mining has declined fairly steadily from 1919 to 1956. In the transportation, public utilities, and communications division the share of employment slumped in 1933 below the downward trend established in previous years and persisted at the lower level all through the remainder of the depression and the early years of the war. A reversal occurred after 1943, the peak year of manufacturing activity during World War II, when the wartime load on railroads, shipping, and other forms of transportation was most pressing. Since 1946, relative employment has continued the 1919-29 trend (see chart 1).

The reasons for the relative decline in employment in mining are well known—the great increases in productivity in coal extraction

and the rising use of petroleum and natural gas fuels which require proportionally less direct manpower in their production. Increased productivity in transporting goods and people, along with some shift to private transportation, accounts for the decline in the transportation employment share. For public utilities and communications, increasing productivity is the major factor.

National income figures (in current dollars) reflect a shift in the relative importance of output by these two industry divisions corresponding in direction to the shift in relative employment. According to U. S. Department of Commerce figures for comparable categories, the proportion of national income originating in both the mining division and the combined transportation, public utilities, and communications division declined by about 26 percent between 1929 and 1956. (Within the transportation and public utilities group, however, the share of national income originating in public utilities and communications increased by about 10 percent over the same period.)

Thus, in summary, two major economic forces together account for the declining shares of employment in the fields of mining and transportation, public utilities, and communications, and perhaps also explain the sharpness of the decline: (1) increasing productivity—which would lead to a reduction in relative manpower needs even if industry output as a proportion of total national product remained the same; and (2) a change in national product mix reducing the relative importance of the two industry groups.

Service and Trade

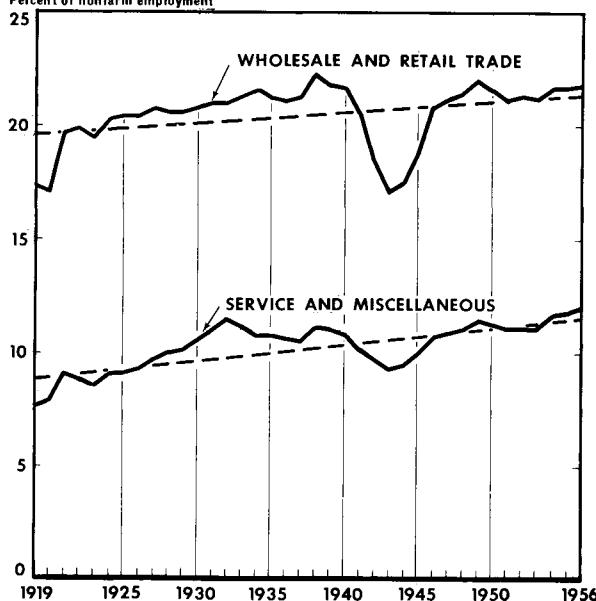

The major industry division known as service and miscellaneous industries includes hotels; laundries; establishments rendering medical, legal, engineering, and other professional services; amusement enterprises such

²Trends lines shown on charts have been fitted by the least squares method.

as bowling alleys and theaters; auto repairing businesses and garages; etc. Trade includes both retail and wholesale establishments. With a few exceptions, the industries of both of these divisions are in direct or close contact with the consumer.

Long-term increases in relative employment in trade and service, at first glance, are not as clearly defined as are the declines in mining and transportation. The trend lines on the following chart, however, do show moderately increasing shares in the two divisions over the period, more rapid in the decade following World War I than in 1946-56. During the depression, these relatively stable industries' shares of total employment rose, whereas during World War II, they declined when employment in manufacturing increased sharply.

Chart 2.
Percent of nonfarm employment

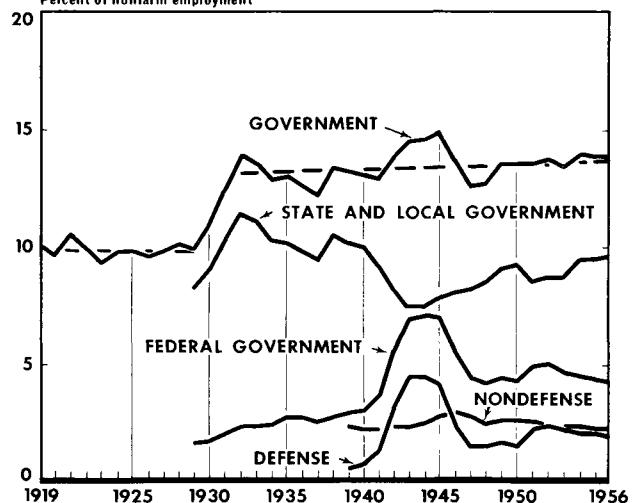

Government

From 1919 to 1929, the share of employment in government was about 10 percent of the total, with actual employment increasing slightly from 2.7 to 3.1 million workers. In the three years from 1929 to 1932, the

government share rose sharply by about 4 percentage points (see table 1). From 1929 to 1932, 3 years of severely declining business activity, actual employment in all other major industries declined steeply, while government employment edged upward slightly from 3.1 to 3.2 million workers (see table A-1, page 1). During the last 25 years, in which absolute employment rose from 3.2 to 7.2 million, government relative employment levels persisted around 13.5 percent of total nonfarm employment. Changes from this figure were, at most, slightly more than 1 percentage point.

Although total government employment displays a strong tendency to remain relatively stable as a proportion of total nonagricultural employment, available data (beginning in 1929) reveal that this is the result of divergent trends between the two principal components of government: the Federal Government and State and local government.

Chart 3.
Percent of nonfarm employment

The proportion of employment in State and local governments was only slightly higher in 1956 than in 1929—9.5 percent of total nonagricultural employment against 8.2 percent. Federal Government employment, on the other hand, more than doubled its share, increasing from 1.7 to 4.3 percent of the total (while Federal employment actually increased

Table 2: Percent of nonagricultural employment by Federal and State and local government based on average annual employment, 1929-56

1955-----	13.8	4.4	2.1	2.3	9.4
1956-----	13.8	4.3	2.0	2.3	9.5

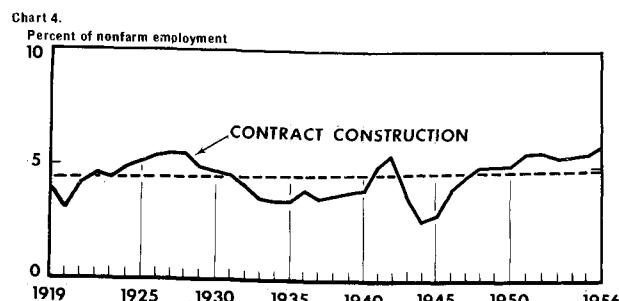

more than fourfold—from 0.5 to 2.2 million workers). This increase reflects the new and additional burdens carried by the Federal Government. The need for greater defense efforts, social security programs, support of agriculture, and other functions and services have all increased sharply since 1929. Close scrutiny of data for recent years suggests a possible reversal of the long-run trend in Federal employment: Since 1952, the Federal Government's share of total nonfarm

employment has fallen consistently; the share in Federal nondefense activities has been declining almost yearly since 1946.

Construction

Considering the entire span of the period studied, the share of employment in contract construction shows no significant persistent upward or downward movement. Although employment as a percentage of the total appears

essentially stable over the long run, relatively large fluctuations occurred.

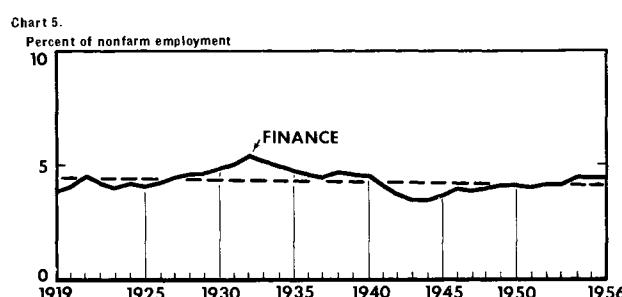

Between the end of World War I and the onset of the depression, the share of jobs in construction rose almost every year as the Nation's rising prosperity during the 1920's created a construction boom. Actual employment in the industry skyrocketed from 1.0 million in 1919 to 1.6 million in 1928, a 60-percent advance in 10 years; total employment advanced from 26.9 to 29.7 million, about 10 percent. In 1929, job shares in construction began to fall as actual employment in the industry began declining before employment in other industry divisions. During the 1930's, the share of construction jobs remained in a slump as the failing economy pushed actual employment down to low levels. Just prior to, and in the early stages of America's entry into World War II, construction's share of employment shot up briefly as cantonments and defense plants were rushed into place, then dropped as materials became scarce and tighter restrictions were clamped on building for private purposes. The end of World War II brought a renewal of the steadily rising job share pattern which had been interrupted by the depression and the war.

Finance

The finance industry, like construction, was characterized by no persistent change in the share of job opportunities over the 38-year span. And as in construction, marked fluctuations did occur, but for different

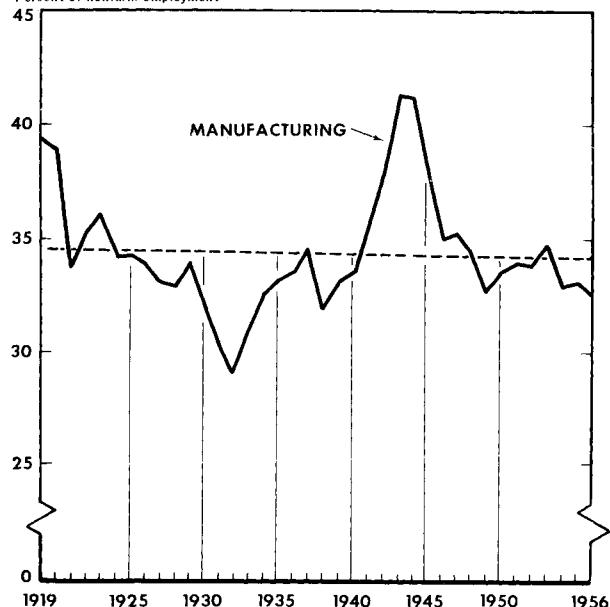

reasons. Whereas construction's share fluctuated because its actual employment swung more violently than nonfarm employment, in finance actual employment was stable, causing its share to change only because total employment changed in response to the alternating forces of prosperity and depression and peace and war. As in other industries, the trends in both finance and construction in the two post-war periods were similar.

Manufacturing

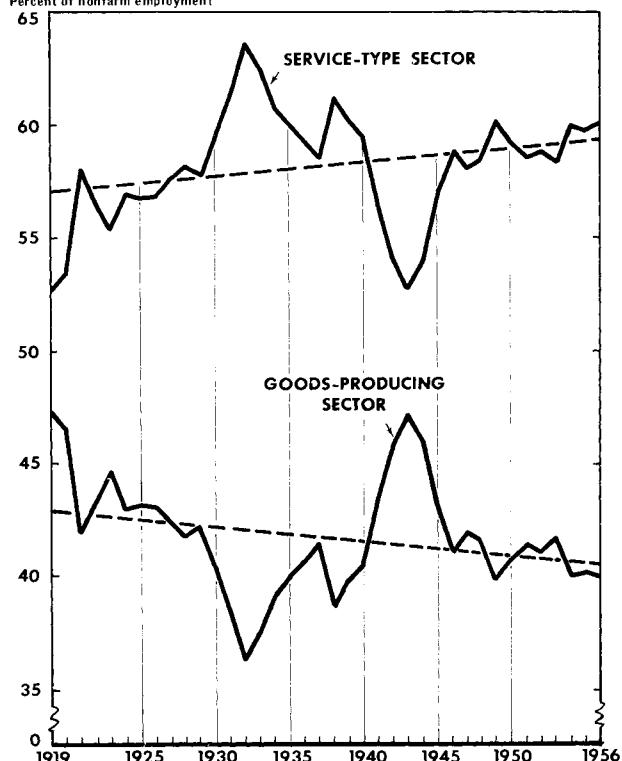

The effects of business cycles and war and peace on the composition of total nonfarm employment are magnified more in manufacturing than in any other industry division. In 1919, 39 percent of total nonfarm employment was in manufacturing. From this high, the share of employment fluctuated around a gradually declining trend until 1929, and then plummeted from 34 to 29 percent in the following 3 years. Recovery was almost as swift as the decline, with the percentage reaching 34.5 by 1937. After a temporary setback caused by the 1938 recession, the share in manufacturing soared to a record, for the 38 years under study, of 41 percent of total nonfarm employment in the war year of 1943. Reduced war needs swiftly dropped the share back to 35 percent by 1946. From this point, a trend of declining relative job opportunities, which had followed World War I for a decade but was interrupted by depression and war, was resumed. The post-World War II decline, however, was at about half the rate of the post-World War I downturn.

Chart 6.
Percent of nonfarm employment

wide swings in manufacturing, which distort and blur the underlying long-run trends. The depression of the 1930's is clearly denoted as are the minor recessions of 1949 and 1954 (see chart 7). World War II and the great depression, however, cause the widest deviation from the central tendency. Nevertheless, there is a clear indication that over the four decades the share of employment in the goods-producing sector has declined.³

Chart 7.
Percent of nonfarm employment

The period from 1930 to 1945 was attended by a sequence of events which strongly affected the Nation's economy. Not only did the United States suffer the most catastrophic depression in its history but it was also

Long-Term Trends From a Different View

Grouping the major industry divisions into two categories—goods producing and service-type—provides a broader perspective than analysis of each major group and reveals underlying characteristics not otherwise readily discernible. The goods-producing sector includes: Construction (the erection of factories and homes, the paving of highways, etc.); all of the extractive industries (mining of coal and metals and production of oil and natural gas); and manufacturing (chemicals, processed food, lumber, autos, machinery, clothes, etc.). The service sector includes the service and miscellaneous industries division; trade (buying and selling at wholesale and retail); the transportation, communications, and public utilities division; the finance, insurance, and real estate division; and government.

Relative employment in these two categories is markedly affected by the economic aberrations, largely a consequence of the

³For an amplification of the goods vs. service sector trends, see *Changing Patterns of Industrial Employment, 1919-55*, Monthly Labor Review, March 1956, pp. 279-285.

struck by the calamitous forces of World War II. On the other hand, from 1919 to 1929 and from 1946 to 1956, although short recessions and periods of peak prosperity occurred, the relative employment fluctuations did not move far from the basic historical trends. For both postwar periods, the 2 sectors diverge at a more rapid rate than for the 38-year period (see chart 7). It may well be that the trends in both postwar periods are closer to basic economic patterns than the overall trend of the past 38 years.

Trend Rates

The trend lines shown in the preceding charts provide approximate measures of the rates by which shares of employment have changed among industries in the past 38 years.

These, together with rates computed for the two postwar periods, are shown in table 3.

It would be a mistake to conclude that the allocation of job opportunities over the next few years will inevitably and precisely follow patterns of the recent past. The development of atomic power, advances in the field of automation, and other technological development may change the employment picture. Moreover, the past itself is not so well defined that its characteristics are unmistakable. Careful examination of data can lead, as has been shown, in table 3, to several slightly differing conclusions regarding the rates of change. The persistent agreement on directions shown by the figures in table 3, however, argues strongly that the basic trends are not likely to be turned or modified significantly over the next few years.

INDEXES OF
PRODUCTION-WORKER AGGREGATE
WEEKLY MAN-HOURS

UNITED STATES DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

September and October 1957: Preliminary

Employment Highlights

OCTOBER 1957

The number of factory workers continued to decline in October 1957 but employment in most other industries moved seasonally. Total nonfarm employment, which usually rises between September and October, dipped by 50,000 to a level of 53.1 million and the factory workweek declined by 1/2 hour to 39.5 hours. Declines in employment and in factory hours were to some extent the result of an unusually large number of workers absent because of influenza.

The October drop in manufacturing employment was the 10th consecutive monthly decline after allowance for normal seasonal fluctuations. Factory employment was 470,000 under October 1956, and the workweek down by 1.2 hours. The over-the-year gain in total nonfarm employment, which amounted to 1.2 million in January 1957, has progressively narrowed during the past 10 months; nonfarm employment in October 1957 was 125,000 higher than a year ago.

Nonmanufacturing Employment Rises Seasonally

Employment changes in nonmanufacturing industries were mainly seasonal between September and October. Jobs in retail trade continued to show strong seasonal gains. State and local government employment also rose substantially with further seasonal expansion in school systems. Employment in 2 nonmanufacturing industries, transportation and contract construction, was below year-ago levels.

Factory Employment Down in October

Employment in manufacturing dropped by 117,000 between September and October to a level of 16.8 million. The only major employment increase occurred in the automobile industry, where workers were recalled after model changeovers. Some employment gains were also reported by plants producing stampings and hardware for the automobile industry. Job cuts were widespread in such heavy goods industries as steelworks and foundries (where employment totals were further reduced by scattered strikes) and in metalworking, electrical, and general industrial machinery. Consumers goods industries such as household machinery and appliances also reported job declines. The aircraft industry continued to cut back

employment in October.

The textile industry showed a contraseasonal drop in October and the decline in apparel employment was greater than usual for the month. Employment in the food processing industry dropped 72,000 between September and October, largely because of seasonal influences. Most other nondurable-goods industries reported approximately seasonal changes in employment.

Factory Workweek Drops by 1/2 Hour

The workweek of factory production workers, which usually rises between September and October, dropped sharply to 39.5 hours. This decline reflected to some extent the unusually large numbers of workers absent part of the week because of illness. Reduced hours of work were widespread. The primary metals industry, which usually shows a small rise in the October workweek, reported a large decline--1.4 hours--concentrated in steelworks and foundries. Sharp cutbacks--instead of usual increases--were also reported in fabricated metals and machinery industries.

Nondurable-goods industries which reported greater than usual declines, or declines where increases are customary were food, tobacco, apparel, paper, and rubber. The workweek in petroleum products dropped by 1.8 hours over the month.

Average overtime hours in manufacturing declined 0.2 hours over the month. At 2.3 hours, overtime work in October was 0.8 hours below a year ago.

Weekly Earnings Down \$1

As a result of the reduction in the workweek, average weekly earnings of factory production workers dropped by \$1.04 between September and October to a level of \$82.16--about the same as a year ago. Average hourly earnings remained steady at \$2.08. The largest reductions in weekly earnings over the month occurred in petroleum products (\$6.51), primary metals (\$4.34), tobacco (\$2.24), and machinery (\$2.02).

INDEXES OF MAN-HOURS AND PAYROLLS

Table C-3: Indexes of aggregate weekly man-hours in industrial and construction activities ^{1/}

(1947-49=100)

Activity	October 1957	September 1957	August 1957	October 1956
TOTAL ^{2/}.....	107.8	109.9	110.6	115.2
MINING.....	84.5	86.8	86.8	86.9
CONTRACT CONSTRUCTION.....	149.7	153.8	157.4	157.7
MANUFACTURING.....	103.3	105.1	105.4	111.0
DURABLE GOODS.....	109.8	110.8	112.3	120.2
NONDURABLE GOODS.....	95.6	98.3	97.3	100.2
<i>Durable Goods</i>				
Ordnance and accessories.....	304.9	317.2	325.5	373.6
Lumber and wood products (except furniture).....	81.3	81.2	86.6	91.4
Furniture and fixtures.....	107.3	108.0	106.8	111.7
Stone, clay, and glass products.....	104.3	106.2	106.4	111.2
Primary metal industries.....	98.8	103.6	104.3	113.9
Fabricated metal products (except ordnance, machinery, and transportation equipment).....	114.1	115.3	114.4	121.1
Machinery (except electrical).....	100.2	104.2	103.1	114.0
Electrical machinery.....	134.8	138.5	134.8	145.8
Transportation equipment.....	134.1	125.8	136.7	141.3
Instruments and related products.....	115.7	117.6	116.1	123.8
Miscellaneous manufacturing industries.....	104.7	105.8	102.4	112.6
<i>Nondurable Goods</i>				
Food and kindred products.....	92.1	99.8	97.8	99.8
Tobacco manufactures.....	84.3	95.1	86.2	101.6
Textile-mill products.....	75.3	75.1	75.0	80.9
Apparel and other finished textile products.....	101.9	105.4	106.1	106.3
Paper and allied products.....	117.5	118.0	116.2	118.3
Printing, publishing, and allied industries.....	116.6	116.0	112.7	116.3
Chemicals and allied products.....	104.8	104.7	102.9	107.7
Products of petroleum and coal.....	91.1	96.8	94.2	95.2
Rubber products.....	105.5	105.8	105.1	110.1
Leather and leather products.....	91.0	92.4	95.8	91.2

^{1/} Aggregate man-hours are for the weekly pay period ending nearest the 15th of the month and do not represent totals for the month. For mining and manufacturing, data refer to production and related workers. For contract construction, data relate to construction workers.

^{2/} Includes only the divisions shown.

NOTE: Data for the 2 most recent months are preliminary.

Table C-4: Index of production-worker weekly payrolls in manufacturing

(1947-49=100)

Manufacturing	October 1957	September 1957	August 1957	October 1956
Production-worker weekly payrolls.....	161.9	164.9	164.7	169.0

NOTE: Data for the 2 most recent months are preliminary.

NOTE: Data for the current month are preliminary.

1/ Not available.

2/ Data relate to employees in such occupations in the telephone industry as switchboard operators; service assistants; operating room instructors; and pay-station attendants. In 1956, such employees made up 40 percent of the total number of nonsupervisory employees in establishments reporting hours and earnings data.

3/ Data relate to employees in such occupations in the telephone industry as central office craftsmen; installation and exchange repair craftsmen; line, cable, and conduit craftsmen; and laborers. In 1956, such employees made up 27 percent of the total number of nonsupervisory employees in establishments reporting hours and earnings data.

4/ Data relate to domestic nonsupervisory employees except messengers.

5/ Money payments only: additional value of board, room, uniforms, and tips, not included.

* Data for July 1957: \$95.63, 42.5, and \$2.25 respectively.

ADJUSTED EARNINGS

Table C-6: Average weekly earnings, gross and net spendable, of production workers in manufacturing, in current and 1947-49 dollars

Item	September 1957	August 1957	September 1956	Average, 1947-49

Worker with no dependents:				
Current dollars.....	68.22	67.90	67.30	46.03
1947-49 dollars.....	56.33	56.12	57.47	46.03
Worker with 3 dependents:				
Current dollars.....	75.63	75.31	74.70	51.68
1947-49 dollars.....	62.45	62.24	63.79	51.68

NOTE: Data for the current month are preliminary.

Table C-7: Average hourly earnings, gross and excluding overtime, of production workers in manufacturing, by major industry group

Major industry group	Gross average hourly earnings			Average hourly earnings, excluding overtime 1/		
	September 1957	August 1957	September 1956	September 1957	August 1957	September 1956
MANUFACTURING.....	\$2.08	\$2.07	\$2.01	\$2.02	\$2.01	\$1.93
DURABLE GOODS.....	2.22	2.21	2.14	2.16	2.14	2.06
Nondurable Goods.....	1.90	1.88	1.82	1.84	1.83	1.76
<i>Durable Goods</i>						
Ordnance and accessories.....	2.37	2.34	2.23	2.32	2.29	2.14
Lumber and wood products (except furniture).....	1.83	1.84	1.81	1.76	1.77	1.73
Furniture and fixtures.....	1.76	1.76	1.72	1.71	1.70	1.66
Stone, clay, and glass products.....	2.07	2.06	1.98	1.99	1.98	1.90
Primary metal industries.....	2.56	2.54	2.43	2.50	2.48	2.34
Fabricated metal products (except ordnance, machinery, and transportation equipment).....	2.22	2.20	2.11	2.14	2.12	2.03
Machinery (except electrical).....	2.32	2.30	2.25	2.26	2.23	2.15
Electrical machinery.....	2.07	2.06	2.01	2.02	2.01	1.94
Transportation equipment.....	2.46	2.43	2.36	2.40	2.37	2.27
Instruments and related products.....	2.13	2.10	2.05	2.08	2.06	1.99
Miscellaneous manufacturing industries.....	1.81	1.80	1.76	1.75	1.75	1.70
<i>Nondurable Goods</i>						
Food and kindred products.....	1.92	1.90	1.81	1.84	1.83	1.73
Tobacco manufactures.....	1.46	1.49	1.38	1.44	1.47	1.36
Textile-mill products.....	1.51	1.50	1.45	1.46	1.46	1.40
Apparel and other finished textile products.....	1.51	1.50	1.48	1.48	1.48	1.46
Paper and allied products.....	2.08	2.06	1.97	1.97	1.95	1.87
Printing, publishing, and allied industries 2/.....	2.52	2.51	2.46	—	—	—
Chemicals and allied products.....	2.25	2.25	2.14	2.19	2.19	2.08
Products of petroleum and coal.....	2.73	2.69	2.59	2.65	2.63	2.52
Rubber products.....	2.28	2.27	2.20	2.20	2.18	2.12
Leather and leather products.....	1.55	1.54	1.51	1.52	1.51	1.49

1/ Derived by assuming that the overtime hours shown in table C-2 are paid at the rate of time and one-half.

2/ Average hourly earnings, excluding overtime, are not available separately for the printing, publishing, and allied industries group, as graduated overtime rates are found to an extent likely to make average overtime pay significantly above time and one-half. Inclusion of data for the group in the nondurable-goods total has little effect.

NOTE: Data for the current month are preliminary.
