Employment Patterns and Trends in the New York-Northeastern New Jersey Metropolitan Area

Samuel Ehrenhalt*

The Nation's leading industrial center—the New York-Northeastern New Jersey Metropolitan Area—provides over 5½ million non-farm jobs, more than Chicago and Los Angeles, the second and third ranking areas, combined. In total nonfarm employment, it surpasses every State except New York State as a whole. Although only 8 percent of the country's population lives within its confines, close to 11 percent of the Nation's workers are employed in this 17-county area.¹

The area is the Nation's ranking manufacturing center despite the fact that nearly two in three of its workers are employed in nonfactory lines. Particularly outstanding is the concentration of garment manufacturing and printing activities, reflecting New York's traditional role as America's fashion and publishing center. Apparel's 370,000 workers account for more than 30 percent of nationwide employment in this industry, and the 160,000 engaged in printing and publishing represent almost one-fifth of the national total. (See chart.)

In activities other than manufacturing, the area's firms employ 1 of every 5 wage and salary workers in finance, insurance, and real estate in the United States; 1 out of 8 in the service industries; and more than 1 out of 10 in transportation-public utilities and wholesale-retail trade.

Geographical Distribution Within Area Employment is concentrated in the New York City and the Newark-Jersey City subareas. Together, they account for nearly 80 percent of the area's employment. The rapidly growing suburban areas of Nassau-Suffolk, Westchester-Rockland, Paterson, and Perth Amboy are suburban only by comparison—

they are actually highly industrialized and account for 1 in every 4 factory jobs in the area.

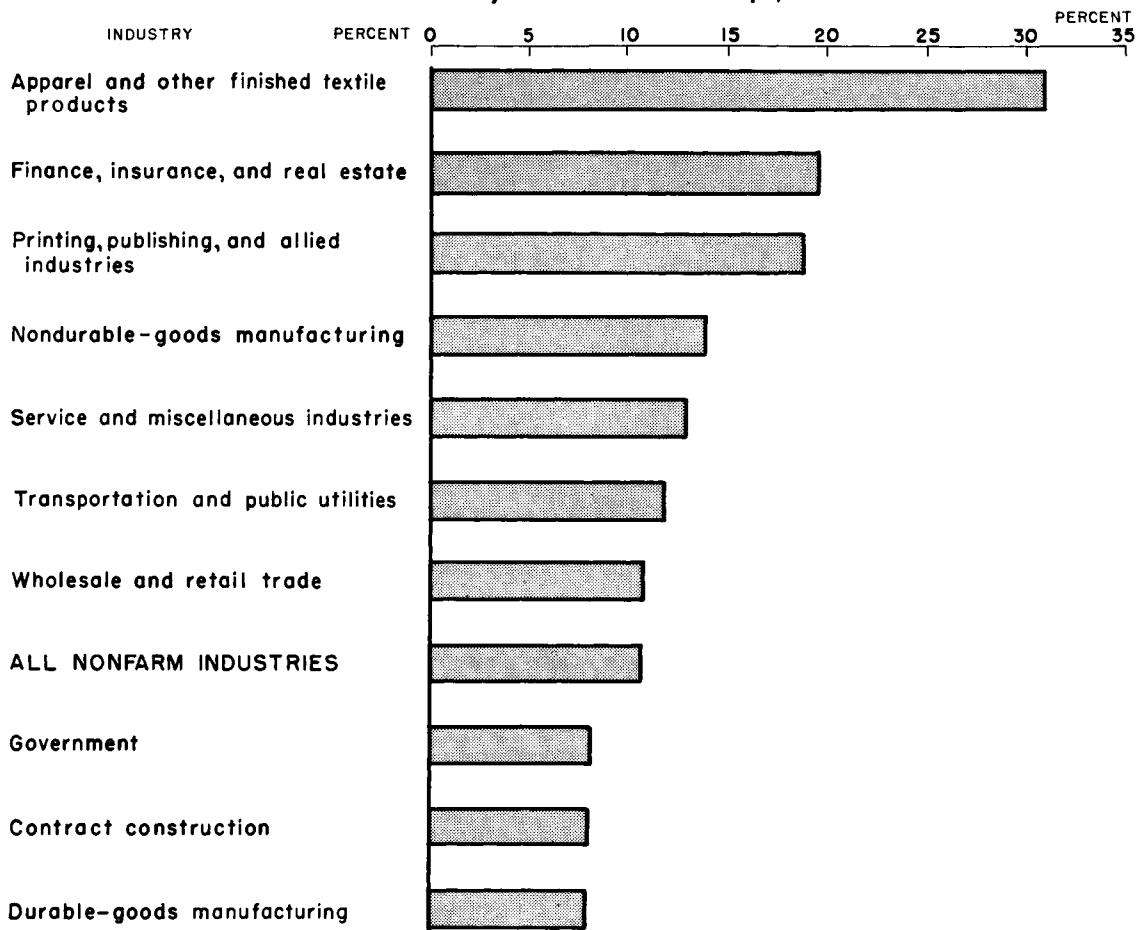

The central cities—New York City and Newark-Jersey City—are decidedly preeminent in most nonmanufacturing industries, employing on the average over four-fifths of the area's work force in these industry divisions. More than 90 percent of finance, insurance, and real estate employment is concentrated in the two cities. They also account for 86 percent of transportation and public utilities workers, reflecting the locale of major railroad, bus, and dock facilities; and 84 percent of service employment, owing to heavy concentrations of business services such as advertising and the amusement industries. In contract construction, on the other hand, the central-cities proportion is less than two-thirds, showing the rapid pace of residential, commercial, and public construction in the suburbs.

Recent Trends in Employment Through cooperative arrangements among the New Jersey Department of Labor and Industry, the New York Department of Labor, and the Bureau of Labor Statistics, the Bureau's Regional Office in New York has developed statistics on employment, hours, and earnings for the area as a whole. The series begin with January 1952, and current data are issued monthly.

¹ The New York-Northeastern New Jersey Standard Metropolitan Area consists of the 5 boroughs of New York City, Nassau, Suffolk, Westchester, and Rockland counties in New York, and Bergen, Passaic, Essex, Hudson, Union, Middlesex, Morris, and Somerset counties in New Jersey.

AS PERCENT OF NATIONAL INDUSTRY EMPLOYMENT**

UNITED STATES DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS

Between 1952 and 1957, the number of wage and salary workers in the 17-county area increased by 250,000, rising to 5.6 million. Although this 5-percent increase was well below the 8-percent gain for the United States as a whole, employment growth in the fast-growing suburban portions of the area has more than kept pace with the national average. Overall, the suburban segment registered an employment rise of better than 20 percent during this period. The gains were particularly marked in the 4 New York suburban counties—Nassau, Suffolk, Westchester, and Rock-

land—where employment rose by 136,000 or more than 30 percent, to a record 582,000 in 1957.

For the area as a whole, its share of national employment was less in 1957 than it had been in 1952 for every industry division except transportation-public utilities and contract construction. In manufacturing, all but two of the major industry groups in the area experienced less favorable employment trends during this period than in the Nation as a whole. This is hardly surprising in view of the increasing industrialization and general

economic development spurred by rapid population growth in other areas of the country. Between 1950 and 1957, the Nation's population increased by almost 13 percent, significantly above the 9-percent increase for the New York-Northeastern New Jersey area.

Changes in Industrial Structure There has been a gradual but continuing shift in the economic center of gravity of the area. The prime characteristic of this shift is the de-emphasis of manufacturing and the increasing importance of the service industries, construction, and other nonmanufacturing activities. The area's 1,750,000 factory jobs in 1957 were 48,000 below the 1952 figure, lowering the percentage of all nonfarm workers employed in manufacturing from 34 percent in 1952 to 31 per-

cent in 1957. This change reflects long-term economic trends that are also evident in statistics for the United States as a whole.²

The statistical records of the past 5 years, summarized in table 3, point up the variations in employment developments within manufacturing. Overall, the durable-goods industries have shown a slight increase during this period, with a gain of workers in instruments and nonelectrical machinery largely offset by employment cutbacks in electrical machinery and transportation equipment.

In the nondurable-goods industries, however, employment was reduced between 1952 and 1957, with apparel and textiles leading the

²See America's Changing Job Sources (in Employment and Earnings, November 1957).

decline with work force reductions of 44,000 and 18,500, respectively. Only 3 of the 10 components of nondurable-goods production employed more workers in 1957 than 5 years earlier; the important printing and publishing industries added 14,000, and smaller increases occurred in chemical plants and in the manufacture of paper and allied products.

In nonmanufacturing activities, employment averaged 3.9 million in 1957, registering a gain of 300,000 over 1952. This 8-percent rise was led by 102,000 new jobs in the service industries and 98,000 in wholesale and retail trade, followed by smaller but nevertheless substantial gains in finance-insurance-real estate and contract construction. During 1957, each of these major divisions represented a larger share of total nonfarm jobs in the area than in 1952.

Geographical Employment Shifts Along with the shifts in industrial structure, there is evidence of a significant geographical redistribution of employment opportunities within the area.

Nearly 200,000 of the 250,000 nonfarm job increase between 1952 and 1957 occurred in the suburban counties of the area. Conversely, although 4 out of 5 workers are employed in the central cities, they accounted for only 1 in every 5 new jobs during the 1952-57 period (table 2).

This broad shift in the geographical concentration of employment within the area is largely the product of population changes characterized by sharp increases in the suburban counties and stability or slight declines in the central cities. Thus, the population of the area as a whole rose by 1.2 million between 1950 and 1957, according to U. S. Bureau of the Census estimates, but more than 75 percent of this gain was centered in the 4 suburban counties in the New York State portion. These 4 counties now contain 18 percent of the area's population compared with 13 percent in 1950. New York City's population, in contrast, declined 96,000 over the 7 years.

In every division, the suburban segment showed substantially more favorable employment

trends than the 1952-57 national changes. In the important manufacturing sector, the suburbs registered a 9-percent gain compared with 3 percent for the United States as a whole. The largest gain—63,000—occurred in wholesale and retail trade, with substantial increases in all other divisions except mining-quarrying.

Hours and Earnings Gross weekly earnings of the area's more than 1½ million factory production workers averaged \$81.09 in 1957, 18 percent higher than in 1952, but somewhat less

than the countrywide average increase. The rise in weekly earnings resulted from higher hourly rates rather than an increased workweek, since the workweek dropped an average of eight-tenths of an hour between 1952 and 1957. During this period, gross average hourly earnings in the area rose from \$1.73 to \$2.09.

Hours of work in the area have consistently averaged 1 to 1½ hours below the national average during the past 5 years, although generally following broad national trends in the length of the average workweek. The shorter

hours worked in the area are traceable largely to aspects of its industrial structure, particularly the high relative importance of the apparel and printing industries. Shorter than average basic workweek schedules are prevalent among establishments in these industry groups.

Earnings of manufacturing production workers vary from one part of the area to another, often reflecting substantial dif-

ferences in industry composition. For example, the 1957 hourly earnings in the Nassau-Suffolk subarea exceeded the national average by 14 cents, whereas New York City's factory workers earned 3 cents less per hour than the national average. The concentration of the high-wage aircraft industry in Nassau-Suffolk and the relatively lower paid soft-goods industries in New York City largely account for such differences in earnings levels.

Employment Highlights

JULY 1958

Nonfarm employment showed a somewhat smaller than usual midsummer decline, dropping by 200,000 over the month to 50.2 million in July 1958. Durable-goods manufacturing, which has been affected most by the business downturn, showed some improvement for the second month in a row, after allowance for normal seasonal changes. Employment developments in other industries were in general seasonal.

The factory workweek remained unchanged at 39.2 hours in July, although there is normally a small decline associated with vacations. Average hourly earnings rose by 1 cent to \$2.13, resulting in an increase of 40 cents in weekly pay to \$83.50.

Nonmanufacturing Employment Changes Seasonal

Employment in the nonmanufacturing industries showed the usual large changes in July. The summer recess in the school system was reflected in a decline of over 200,000 employees on State and local government payrolls. Employment in contract construction rose seasonally, while employment in trade dropped by about the usual amount.

Factory Job Drop is Small

Employment in manufacturing fell by less than the usual amount in July, edging down by 23,000 to 15.2 million. This was the second successive month, after a year and a half of steady decline, in which employment developments were better than seasonal.

In the durable-goods sector, the fabricated metals, machinery, electrical machinery, furniture, and stone-clay-glass industries, reported either less than usual declines or increases where declines are normal at this time of year. There were indications of better than usual employment changes among producers of construction materials (structural steel and plumbing and heating equipment, for example), and among producers of automobile components (metal stampings and electrical equipment for vehicles); the latter improvement was apparently associated with an early automobile model changeover. The automobile industry continued to report small employment declines.

Employment changes in the nondurable-goods sector were mainly seasonal, including a rise of 65,000 in food processing.

Workweek Steady at 39.2 Hours

The factory workweek remained unchanged at 39.2 hours between June and July, in contrast to a usual small decline. Weekly hours of work dropped by 0.2 in the durable-goods sector--less than the average drop--and rose seasonally by 0.1 in the nondurable-goods sector. Hours rose instead of falling in the primary metals, electrical machinery, and furniture industries.

Weekly overtime hours rose from 1.9 in June to 2.0 hours in July.

Factory Earnings Rise

Average hourly earnings increased by 1 cent to \$2.13 in July, primarily as a result of wage increases in the steel, aircraft, shipbuilding, paper, and chemicals industries. Weekly earnings rose by 40 cents to \$83.50 as a result of the rise in hourly earnings.

Employment Down 2 Million Over Year

Despite some improvement in the job situation during the past 3 months, total nonfarm employment was 2 million below the level of a year ago. Manufacturing firms accounted for 1-1/2 million of this job loss, with most of it concentrated in hard-goods industries. Over-the-year losses of a quarter-million jobs or more occurred in the transportation equipment, machinery, and primary metals industries. In the nonmanufacturing sector, transportation and trade showed large job losses over the year, but State and local governments reported large increases. Weekly hours of work in manufacturing were 0.6 below July 1957, while weekly overtime work, at 2.0 hours, was 0.4 hours below a year ago.

Average weekly earnings were more than a dollar above last July because of higher hourly earnings--\$2.13 compared with \$2.07.

NOTE: Data for the current month are preliminary.

1/ Not available.

2/ Data relate to employees in such occupations in the telephone industry as switchboard operators; service assistants; operating room instructors; and pay-station attendants. In 1957, such employees made up 39 percent of the total number of nonsupervisory employees in establishments reporting hours and earnings data.

3/ Data relate to employees in such occupations in the telephone industry as central office craftsmen; installation and exchange repair craftsmen; line, cable, and conduit craftsmen; and laborers. In 1957, such employees made up 29 percent of the total number of nonsupervisory employees in establishments reporting hours and earnings data.

4/ Data relate to domestic nonsupervisory employees except messengers.

5/ Money payments only; additional value of board, room, uniforms, and tips, not included.

1/ Derived by assuming that the overtime hours shown in table C-2 are paid at the rate of time and one-half.

2/ Average hourly earnings, excluding overtime, are not available separately for the printing, publishing, and allied industries group, as graduated overtime rates are found to an extent likely to make average overtime pay significantly above time and one-half. Inclusion of data for the group in the nondurable-goods total has little effect.
