## EMPLOYMENT AND PAY ROLLS

## Summary of Reports for May 1936

INDUSTRIAL employment and pay rolls again increased between April and May, according to reports from more than 135,000 manufacturing and nonmanufacturing establishments surveyed by the Bureau of Labor Statistics.

Although seasonal activity was a primary factor in the gains registered by a number of manufacturing industries, the net increases for manufacturing as a whole were contraseasonal.

Gains in employment were shown by 12 of the 16 nonmanufacturing industries surveyed, and increased pay rolls by all but 1 (bitu-minous-coal mining). Among the industries showing marked gains in both employment and pay rolls were building construction, anthracite mining, quarrying and nonmetallic mining, dyeing and cleaning, and metalliferous mining.

An increase in the number of workers employed by class I steam railroads was also shown between April and May, according to preliminary reports of the Interstate Commerce Commission.

The public employment reports for May showed marked increases in the number of employees working on construction projects financed by regular governmental appropriations and on construction projects financed by the Public Works Administration. Substantial employment gains also occurred on construction projects financed by the Reconstruction Finance Corporation and on the emergency conservation program.

## Private Employment

It is estimated that nearly 90,000 workers were returned to employment between April and May in the manufacturing and nonmanufacturing industries surveyed. Weekly pay rolls were increased by approximately $\$ 6,900,000$. In comparison with the corresponding month of last year, May 1936 shows increases of more than 654,000 in number of workers employed and nearly $\$ 36,000,000$ in weekly wage disbursements. These estimates are based on reports from approximately 135,000 establishments. In May these establishments employed more than $7,200,000$ workers, whose weekly earnings totaled more than $\$ 170,000,000$.

Contrary to the seasonal movement, factory employment rose 0.7 percent in May, continuing the upswing which has been shown each month since January. This gain represented the return of more than 51,000 workers to jobs and brought the employment index to 85.7. The factory pay-roll index advanced 1.8 percent to 79.3 ; expressed in dollars, the gain in weekly wages over the month interval amounted to $\$ 2,659,000$. The May indexes for both employment and pay rolls stood at the highest level reached since October 1930.

Employment in the durable-goods group of manufacturing industries showed a gain of 2.1 percent over the year, the May 1936 index standing at 79.2 and exceeding the level of any month since October 1930. The nondurable-goods group, however, showed a decline of 0.4 percent in employment, due primarily to seasonal decreases in the textile and leather industries. Despite this recession, the May 1936 employment index for the nondurable-goods group stood at 92.7 and was 1.0 percent above the figure for May 1935.

Fifty of the ninety manufacturing industries surveyed showed gains in employment over the month interval and 65 reported increased pay rolls. The gains in May brought the level of employment in a number of industries above the maximum recordrd in any month during recent years. Employment in blast furnaces, steel works, and rolling mills reached the highest level since September 1930; foundries and machine shops employed more workers than in any month since September 1930; engine-turbine-tractor factories employed more workers than in any month since March 1930; and the electrical machinery, steam fitting, sawmill, brick, and steam-railroad repair shop industries had more employees than in any month since the latter part of 1931.

Seasonal activity was a primary factor in the employment gains of 19.2 percent in ice cream, 14.2 percent in radios and phonographs, 9.2 percent in beverages, 9.0 percent in beet sugar, and 5.5 percent in butter. Employment increased sharply in a number of the industries manufacturing building-construction materials and supplies. The cement industry showed a gain of 11.6 percent; brick, tile, and terra cotta, 8.7 percent; structural and ornamental metalwork, 7.2 percent; lighting equipment, 5.6 percent; marble-slate-granite, 5.1 percent; sawmills, 2.5 percent; and steam fittings, millwork, paint and varnish, and plumbers' supplies, from 1.0 percent to 2.8 percent. The locomotive industry reported a gain of 10.7 percent, and employment in the blast furnace, steel works, rolling mill industry rose 3.1 percent. Other industries of major importance reporting increases were foundries and machine shops, 2.8 percent; electrical machinery, apparatus and supplies, 2.3 percent; furniture, 1.2 percent; baking, 1.2 percent; and automobiles, 1.4 percent. Gains ranging from 2.1 percent to 3.1 percent were shown in men's furnishings, slaughtering,
rubber tires and tubes, cigars and cigarettes, and rayon and allied products. Employment in the machine-tool industry continued the upward movement which has been shown consistently each month since October 1934. The gain of 1.7 percent in employment in this industry from April to May raised the May index (107.8) to the maximum recorded in any month since October 1930.

The most pronounced declines in employment from April to May were seasonal. The fertilizer industry reported a decrease of 19.7 percent; cottonseed-oil, cake, meal, 14.8 percent; millinery, 6.6 percent; and men's clothing, 5.1 percent.

Employment in the silk and rayon goods industry decreased 6.6 percent and in dyeing and finishing textiles, 4.0 percent. Boot and shoe factories reported a seasonal decrease of 3.4 percent and the shirt and collar industry showed a decline of 3.1 percent. Declines ranging from 2.0 percent to 28 percent were shown in the confectionery, explosive, flour, women's clothing, corset, and cotton smallware industries. Eleven industries showed declines ranging from 1.0 percent to 1.8 percent, and the remaining 15 industries which registered declines showed losses ranging from less than 0.1 percent to 0.8 percent.

Twelve of the sixteen nonmanufacturing industries surveyed showed gains in employment and all except one (bituminous-coal mining) showed larger pay rolls.

Substantial gains in employment were reported in the private building construction, anthracite mining, quarrying, dyeing and cleaning, and metal-mining industries. The gain of 13 percent in the private building construction industry is larger than the gain shown in May of any of the 4 preceding years for which information is available. Sharp gains in the production of anthracite coal resulted in an increase of 10.3 percent in employment. Seasonal activity accounted for the gains of 7.5 percent in quarrying and 6.7 percent in dyeing and cleaning. Metal mines showed a further increase in number of workers ( 5.7 percent), continuing the gains which have been reported each month since July 1935. The May 1936 employment index for this industry (60.8) reached the highest point recorded since May 1931. Laundries reported a seasonal increase of 2.7 percent in employment and crude-petroleum-producing firms increased their forces by 1.9 percent. Hotels continued to add workers to their pay rolls and each of the three public-utility industries surveyed (telephone and telegraph, electric light and power and manufactured gas, and electric-railroad and motorbus operation and maintenance) reported gains in employment. Insurance offices also showed a slight gain in number of employees.

Employment in retail-trade establishments showed little change, reports from 56,426 establishments indicating a net decline of only
0.2 percent. The decline was confined largely to the general-merchandising group of retail establishments, composed of department, variety, and general-merchandise stores and mail-order houses, in which employment rose sharply in April in response to spring and Easter shopping. Retail apparel stores also reported a seasonal slackening in employment. Among the lines of retail trade in which additional workers were employed in May, the largest gains were shown in lumber and building materials, hardware, automotive, drug, and furniture stores.

Reports received from 16,197 wholesale-trade establishments employing 307,903 workers in May showed a net decline of 1.3 percent in employment over the month interval, although gains were reported in a number of important lines of trade, including food products, furniture, hardware, machinery, chemicals, paper and paper products, automotive, and lumber. These increases, however, were not sufficient to offset the decreases reported in wholesale dry goods and apparel, groceries, petroleum and petroleum products, farm supplies, and other lines of wholesale trade.

Bituminous-coal mines and brokerage firms reported decreases in employment of 1.6 percent and 0.2 percent, respectively.

According to preliminary reports of the Interstate Commerce Commission, there were $1,056,000$ workers (exclusive of executives and officials) employed by class I railroads in May 1936 as against $1,037,798$ in April, a gain of 1.8 percent. Pay-roll data for May were not available at the time this report was prepared. The total compensation of all employees except executives and officials was $\$ 143,505,090$ in April and $\$ 144,859,291$ in March, a decrease of 0.9 percent. The preliminary indexes of employment, compiled by the Interstate Commerce Commission and based on the 3 -year average $1923-25$ as 100 , are 59.8 for May and 58.8 for April. The final March index is 57.2

Hours and earnings.-Average hours worked per week in the manufacturing industries surveyed rose 1.2 percent from 38.7 in April to 39.2 in May. Hourly earnings climbed from 57.3 cents in April to 57.4 cents in May, a gain of 0.1 percent. Average weekly earnings rose 1.1 percent over the month interval, the May figure being $\$ 22.95$.

Gains in average hours worked per week were shown by 11 of the 14 nonmanufacturing industries for which man-hour data are compiled. These increases ranged from less than 0.1 percent in metalliferrous mining to 69.8 percent in anthracite mining. Hourly earnings were up in 9 of the 14 industries, the gains ranging from 0.3 percent in the electric light and power and manufactured gas industry to 2.3 percent in anthracite mining and dyeing and cleaning. Nine
of the fourteen industries and one other, brokerage, showed gains in average weekly earnings. Among them were anthracite mining, 78.2 percent; quarrying and nonmetallic mining, 8.5 percent; building construction, 6.3 percent; and dyeing and cleaning, 5.5 percent.

Table 1 presents a summary of employment and pay-roll indexes and average weekly earnings in May 1936 for all manufacturing industries combined, for selected nonmanufacturing industries, and for class I railroads, with percentage changes over the month and year intervals except in the few industries for which certain items cannot be computed. The indexes of employment and pay rolls for the manufacturing industries are based on the 3-year average 1923-25 as 100 and for the nonmanufacturing industries, on the 12 -month average for 1929 as 100 .

## Public Employment

During May more than 315,000 employees were working on construction projects financed from Public Works Administration funds. Compared with the previous month this is an increase of 51,000 , or 19.3 percent. Substantial employment gains were registered on Federal and non-Federal projects financed from funds provided by the National Industrial Recovery Act. On non-Federal projects finenced from funds provided by the Emergency Relief Appropriation Act of 1935 the number of employees increased from 108,000 in April to 144,000 in May. Total pay-roll disbursements for May amounted to $\$ 22,591,000$, a gain of 19.4 percent over April.

A substantial increase in the number of workers employed on construction projects financed from regular governmental appropriations was also reported. During the month there were approximately 80,000 wage earners employed, a gain of 32.7 percent compared with April. Marked increases in employment occurred on public-road projects and on river, harbor, and flood-control work. Pay-roll disbursements also advanced, increasing from $\$ 5,205,000$ in April to $\$ 6,243,000$ in May.

Employment on construction projects financed by the Reconstruction Finance Corporation showed a moderate gain. During the month 10,988 wage earners were employed on these projects, an increase of 967 compared with the number working in April. Employment gains occurred on bridge-construction projects and on buildingconstruction projects, but the sharpest increase was registered on water and sewerage work. Total pay-roll disbursements of $\$ 962,000$, however, were 15.1 percent less than in April.

The number of wage earners employed on projects financed by The Works Program decreased in May. During the month there were approximately 268,000 fewer workers engaged on this program than in April. On Federal projects employment totaled 401,000, an increase of 6.8 percent over the previous month. On projects operated by the Works Progress Administration, however, the number of employees decreased from 2,857,000 in April to $2,563,000$ in May. Total pay-roll disbursements of $\$ 150,696,000$ were $\$ 9,360,000$ less than in April.

In the regular agencies of the Federal Government, increases in the number of employees were reported for the executive, judicial, and legislative services; a small decrease, however, occurred in the military service. The level of employment in the executive service increased less than 1 percent in May but was 14.8 percent higher compared with May 1935. Of the 818,228 employees in the executive service in May, 117,229 were working in the District of Columbia and 700,999 , outside the District. The most pronounced increase in employment in the executive departments of the Federal Govern-
ment in May occurred in the War Department. Marked gains also were reported in the Department of Agriculture, the Resettlement Administration, the Tennessee Valley Authority, and the Treasury Department. There were appreciable decreases in the number of workers, on the other hand, in the Home Owners' Loan Corporation, the Works Progress Administration, and the Department of the Interior.

Employment during May in emergency conservation work (Civilian Conservation Camps) was the highest of any month since February 1936. During the month the number of employees totaled 408,000 , an increase of 17,000 compared with April. All groups of employees with the exception of supervisory and technical workers registered employment gains. Pay-roll disbursements amounted to $\$ 18,610,000$, an increase of $\$ 552,000$ over the previous month.

The number of workers employed on the construction and maintenance of State roads in May was greater than in any month since October 1935. During the month there were 180,922 workers engaged on this program, an increase of 26,278 compared with employment in April. Of the total number employed, 16,566 or 9.2 percent were engaged in new-road construction and 164,356 or 90.8 percent in maintenance work. Pay-roll disbursements also showed a marked gain, increasing from $\$ 8,918,000$ in April to more than $\$ 10,560,000$ in May.

A summary of Federal employment and pay-roll statistics for May is presented in table 2.

## Detailed Reports for May 1936

## Private Employment

MONTHLY reports on employment and pay rolls in private industry are now available for the following groups: 90 manufacturing industries; 16 nonmanufacturing industries, including building construction; and class I steam railroads. The reports for the first two of these groups-manufacturing and nonmanufacturingare based on sample surveys by the Bureau of Labor Statistics, and in virtually all industries the samples are sufficiently large to be entirely representative. The figures on class I steam railroads are compiled by the Interstate Commerce Commission and are presented in the foregoing summary.

Employment, Pay Rolls, Hours, and Earnings in May 1936
The indexes of employment and pay rolls, average hours worked per week, average hourly earnings, and average weekly earnings in manufacturing and nonmanufacturing industries in May 1936 are shown in table 3. Percentage changes from April 1936 and May 1935 are also given.

${ }^{1}$ Average weekly earnings are computed from figures furnished by all reporting establitshments. Average hours and average hourly earnings are computed from data supplied by a smaller number of establishments as al reporting firms do not furnish man-hours. Percentage changes over year are computed from indexes. Percentage changes over month in average weekly earnings for the manufacturing groups, for all manufacturing industries combined, and for retail trade are also computed from indexes.
liess than 110 of 1 percent.

Table 3.-Employment, Pay Rolls, Hours, and Earnings in Manufacturing and Nonmanufacturing Industries, May 1936 - Continued
Industry

Manufacturing (indexes are based on 3-year average 1923-25=100)

Machinery, not including transportation equipment

Agricultural implements.
Cash registers, adding machines, and calculating machines.
Electrical machinery, apparatus, and supEngines, turbines, tractors, and water
 Foundry and machine-shop products.......... Machina tools.
Radios and phonographs---
Textile machinery and pa
Typewriters and parts.
Transportation equipment
Transporta
Aircraft....

Cars, electric- and steam-railroad.
Shipbuilding
Railroad repair shops
Electric raiiroad

Aluminum manufactures
Brass, bronze, and copper products
Clocks and watches and time-recording devices.
Lighting equipment

Smelting and refining-copper, lead, and

${ }^{2}$ Less than $1 / 10$ of 1 percent.
${ }^{3}$ Cash payments only; the additional value of hoard, room, and tips cannot be computed.

Indexes of employment and pay rolls are given in tables 4 and 5 for all manufacturing industries combined, for the durable- and nondurable-goods groups of manufacturing industries separately, and for 13 nonmanufacturing industries including 2 subgroups under retail trade, by months, January 1935 to May 1936, inclusive. The accompanying diagram indicates the trend of factory employment and pay rolls from January 1919 to May 1936.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 90 manufacturing industries. The base used in computing these indexes is the 3 -year average 1923-25 taken as 100. In May 1936 reports were received from 24,535 establishments employing $4,178,272$ workers, whose weekly earnings were $\$ 95,862,068$. The employment reports received from these establishments cover more than 55 percent of the total wage earners in all manufacturing industries of the country and more than 65 percent of the wage earners in the 90 industries included in the monthly survey of the Bureau of Labor Statistics.

The indexes for nonmanufacturing industries are also computed from data supplied by reporting establishments, but the base is the 12-month average for 1929 as 100.

## Trend of Private Employment by States

A comparison of employment and pay rolls, by States and geographic divisions, in April and May 1936 is shown in table 6 for all groups combined, except building construction and class I railroads, and for all manufacturing industries combined, based on data supplied by reporting establishments. The percentage changes shown, unless otherwise noted, are unweighted-that is, the industries included in the manufacturing group and in the grand total have not been weighted according to their relative importance.

Table 6.-Comparison of Employment and Pay Rolls in Identical Establishments, April and May, 1936, by Geographic Divisions and by States
[Figures in italics are not compiled by the Bureau of Labor Statistics but are taker from reports issued by cooperating State organizations]

## Private Employment and Pay Rolls in Principal Cities

A comparison of May employment and pay rolls with the April totals in 13 cities of the United States having a population of 500,000 or over is made in table 7. The changes are computed from reports received from identical establishments in both months.

In addition to reports included in the several industrial groups regularly covered in the survey of the Bureau, reports have also been secured from establishments in other industries for inclusion in these city totals. As information concerning employment in building construction is not available for all cities at this time, figures for this industry have not been included in these city totals.

Table \%.-Comparison of Employment and Pay Rolls in Identical Establishments in April and May 1936, by Principal Cities

## Public Employment

Employment created by the Federal Government includes employment in the regular agencies of the Government, employment on the various construction programs wholly or partially financed by Federal funds, and employment on relief-work projects.

Construction projects financed by the Public Works Administration are those projects authorized by title II of the National Industrial Recovery Act of June 16, 1933. This program of public works was extended to June 30, 1937, by the Emergency Relief Appropriation Act of 1935.

The Works Program was inaugurated by the President in a series of Executive orders by authority of Public Resolution No. 11, approved April 8, 1935. Employment created by this program includes employment on Federal projects and employment on projects operated by the Works Progress Administration. Federal projects are those conducted by Federal agencies which have received allotments from The Works Program fund. Projects operated by the Works Progress Administration are those projects conducted under the supervision of the W. P. A.

The emergency conservation program (Civilian Conservation Corps) created in April 1933 has been further extended under authority of the Emergency Relief Appropriation Act of 1935.

## Executive Service of the Federal Government

Statistics of employment in the executive branches of the Federal Government in May 1935, April 1936, and May 1936 are given in table 8.

- Data not available.

7 These data are also included in separate tables covering projects financed by The Works Program.
Federal construction projects are financed by allotments made by the Public Works Administration to the various agencies and departments of the Federal Government from funds provided under the National Industrial Recovery Act. The major portion of the low-cost housing program now under way, however, is financed by funds provided under the Emergency Relief Appropriation Act of 1935. The work is performed either by commercial firms, which have been awarded contracts, or by day labor hired directly by the Federal agencies.

Non-Federal projects are financed by allotments made by the Public Works Administration from funds available under either the National Industrial Recovery Act or the Emergency Relief Appropriation Act of 1935. Most of the allotments have been made to the States and their political subdivisions, but occasionally allotments have been made to commercial firms. In financing projects for the States or their political subdivisions from funds appropriated under the Na-
tional Industrial Recovery Act, the Public Works Administration makes a direct grant of not more than 30 percent of the total labor and material cost. When funds provided under the Emergency Relief Appropriation Act of 1935 are used to finance a non-Federal project, as much as 45 percent of the total labor and material cost may be furnished in the form of a grant. The remaining 55 percent or more of the cost is financed by the recipient. When circumstances justify such action, the Public Works Administration may provide the grantee with the additional funds by means of a loan. Allotments to commercial enterprises are made only as loans. All loans made by the Public Works Administration carry interest charges and have a definite date of maturity. Collateral posted with the Public Works Administration to secure loans may be offered for sale to the public, and in this way a revolving fund is provided which enlarges the scope of activities.

Commercial loans have been made, for the most part, to railroads. Railroad work financed by loans made by the Public Works Administration falls under three headings: First, construction work in the form of electrification, the laying of rails and ties, repairs to buildings, bridges, etc.; second, the building and repairing of locomotives and passenger and freight cars in shops operated by the railroads; and third, locomotive and passenger- and freight-car building in commercial shops.

## Monthly Trend

A summary of employment, pay rolls, and man-hours worked on projects financed from public-works funds from July 1933 to May 1936 is given in table 11.

## Emergency Conservation Work

Figures for employment and pay rolls in emergency conservation work in April and May 1936, are presented in table 14.

Table 14.-Employment and Pay Rolls in Emergency Conservation Work, April and May, $1936{ }^{1}$
[Subject to revision]

| Group | Number of employees |  | Amount of pay rolls |  |
| :---: | :---: | :---: | :---: | :---: |
|  | May | April | May | April |
| All groups ${ }^{\text {a }}$ | 407,621 | 391, 002 | \$18, 610, 245 | \$18, 058, 235 |
| Enrolled personnel ${ }^{2}$ | 357, 002 | 340, 371 | 11, 121, 242 | 10, 592,774 |
| Reserve officers | 7,762 | 6,992 | 1, 620, 971 | 1,457,001 |
| Educational advisers ${ }^{3}$ - | 1,975 | 1,970 | 340,067 | 339, 242 |
| Supervisory and technical 4 | 840,862 | 641,669 | ${ }^{5} 5.527,965$ | 6 5, 669,218 |

[^7]Employment and pay-roll data for emergency conservation workers are collected by the Bureau of Labor Statistics from the War Department, the Department of Agriculture, the Department of Commerce, the Treasury Department, and the Department of the Interior. The monthly pay of the enrolled personnel is distributed as follows: 5 percent are paid $\$ 45 ; 8$ percent, $\$ 36$; and the remaining 87 percent, $\$ 30$. The enrolled men, in addition to their pay, are provided with board, clothing, and medical services.
Monthly statistics of employment and pay rolls on the emergency conservation program from May 1935 to May 1936, inclusive, are given in table 15.

## Construction Projects Financed From Regular Governmental Appropriations

Whenever a construction contract is awarded or force-account work is started by a department or agency of the Federal Government, the Bureau of Labor Statistics is immediately notified on forms supplied by the Bureau, of the name and address of the contractor, the amount of the contract, and the type of work to be performed. Blanks are then mailed by the Bureau to the contractor or Government agency doing the work. These reports are returned to the Bureau and show the number of men on pay rolls, the amounts disbursed for pay, the number of man-hours worked on the project, and the value of the different types of materials for which orders were placed during the month.

The following tables present data concerning construction projects on which work has started since July 1, 1934. The Bureau does not have statistics covering projects which were under way previous to that date.
Data concerning employment, pay rolls, and man-hours worked on construction projects financed from regular governmental appropriations during May ${ }^{1}$ are given in table 18, by type of project.

Table 18.-Employment on Construction Projects Financed from Regular Governmental Appropriations, by Type of Project, May 1936

| January | 14,358 | 105, 795 | 120,153 | 7,481,502 |
| February | 10, 256 | 119,777 | 130, 033 | 7,572,614 |
| March. | 8,150 | 133, 386 | 141,536 | 7, 689, 770 |
| April | 11,339 | 143, 305 | 154, 644 | 8,918, 024 |
| May | 16, 566 | 164, 356 | 180,922 | 10,560,866 |

${ }^{1}$ Excluding employment furnished by projects financed from Public Works Administration funds.

[^0]:    ${ }^{1}$ Data concerning number of wage earners refer to employment on last day of month specified. Includes employees of Columbia Institution for the Deaf and Howard University.
    ${ }_{2}$ Includes 136 employees by transfer previously reported as separations by transfer not actual additions for May.
    ${ }^{3}$ Revised.
    ${ }^{4}$ Includes 149,334 wage earners and $\$ 9,101,702$ pay roll covering P. W. A. projects financed from E. R. A. A. $19: 35$ funds.
    s Includes 112,345 wage earners and $\$ 6,346,433$ pay roll covering P. W. A. projects financed from E. R. A. A. 1935 funds.
    ${ }^{6}$ Includes 85 employees and pay roll of $\$ 7,621$, on projects financed by R. F. C. Mortgage Co.
    7 Includes 131 employees and pay roll of $\$ 8,531$ on projects financed by R. F. C. Mortgage Co.
    8 Data covering P. W. A. projects financed from E. R. A. A. 1935 funds are not included in The Works Program and shown only under P. W. A.
    91,510 employees and pay roll of $\$ 5,750,350$ included in executive service.
    1042,220 employees and pay roll of $\$ 5,700,025$ included in executive service.

[^1]:    ${ }^{1}$ Comparable indexes for earlier years will be found in the November 1934 and subsequent issues of this pamphlet, or the February 1935 and subsequent issues of the Monthly Labor Review.
    ${ }^{2}$ Revised.

[^2]:    ${ }^{1}$ Comparable indexes for earlier years for all of these industries, except year-ronud hotels, will be found in the November 1934 and subsequent issues of this pamphlet, or the February 1935 and subsequent issues of the Monthly Labor Review. Complete indexes for year-round hotels will be found in the June 1935 issue of this pamphlet, or the September 1935 issue of the Monthly Labor Review.
    ${ }_{2}$ Not including electric-railroad car building and repairing; see transportation equipment and railroad repair-shop groups, manufacturing industries, table 3.

[^3]:    ${ }^{1}$ Data on number of employees refer to employment on last day of month.
    ${ }^{2}$ Includes employees of Columbia Institution for the Deaf and Howard University.
    ${ }^{3}$ Not including feld employees of Post Office Department or 17,486 employees hired under letters of authorization by the Department of Agriculture with a pay roll of $\$ 779,710$.
    ${ }^{1}$ Includes 136 employees by transfer previously reported as separations by transfer not actual additions for May.
    ${ }_{5}$ Not including employees transferred within the Government service, as such transfers should not be regarded as labor turn-over.

[^4]:    ${ }^{1}$ Maximum number employed during any 1 month by each contractor and Government agency doing force-account work.
