# Employment and Pay Rolls 

## SUMMARY OF REPORTS FOR DECEMBER 1938

## Total Nonagricultural Employment

THERE was a further increase of 200,000 in employment in nonagricultural industries in December. The most significant features of the December gain were the continued increase in factory employment, which normally declines at this season, and an unusually large expansion in retail trade. Since July almost $1,200,000$ workers have been remployed in nonagricultural occupations. These figures do not include employees on projects of the Works Progress Administration and other Federal emergency agencies or certain temporary workers who are hired only during peaks of activity in some industries.

In addition to the gain of approximately 55,000 workers in manufacturing industries, approximately 440,000 additional persons were employed in retail stores between mid-November and mid-December to handle the holiday trade. Smaller increases were reported in metal and coal mining, wholesale trade, brokerage, and insurance. In quarries, dyeing and cleaning plants, and private building construction there were substantial seasonal recessions. In building, the decline was much less pronounced than is usual in December. Class I railroads laid off nearly 18,000 workers. The seasonal reductions in employment in crude-petroleum producing, utilities, hotels, and laundries were not large.

In December employment gains were reported on P. W. A. projects, on low-cost housing projects of the United States Housing Authority, on Federal projects under The Works Program, and on work projects of the National Youth Administration. Decreases in the number working occurred on all other programs. In the regular services of the Federal Government increases occurred in the executive, judicial, and military services; a decrease occurred in the legislative service.

## Industrial and Business Employment

Increases in employment were reported by 49 of the 87 manufacturing industries surveyed by the Bureau and 7 of the 16 nonmanufacturing industries covered. Pay-roll increases were reported by 63 of the manufacturing and 8 of the nonmanufacturing industries.

The rise of 0.8 percent ( 55,000 workers) in factory employment continued the succession of increases which began in July 1938, although in December employment normally declines by about 1 percent. The Bureau of Labor Statistics index of factory employment ( 91.2 percent of the $1923-25$ average) is above that for any month during the past year. It shows a reduction of 3.5 percent from December 1937. The gain of 3.0 percent in factory pay rolls was much more pronounced than the usual seasonal increase of 0.4 percent and represented an addition of $\$ 4,800,000$ in weekly disbursements to factory wage earners. The Bureau index of factory pay rolls for December (86.6 percent 'of the 1923-25 average) reached the highest level since November 1937 and was 2.9 percent above the December 1937 level.

The employment increases in the separate manufacturing industries were in most instances either more pronounced than seasonal or contraseasonal, while most of the declines were smaller than usual. The most pronounced gains were in the durable-goods industries, in which employment rose 1.2 percent as compared with 0.4 percent in the nondurable goods group. The manufacturing industries in which the most substantial numbers of workers were returned to employment between November and December were as follows: Automobiles, $(20,100)$, woolen goods $(12,200)$, foundries and machine shops $(11,200)$, shoes $(9,100)$, steel $(5,700)$, cotton goods $(4,400)$, agricultural implements $(3,700)$, and book and job printing $(3,000)$. Among the manufacturing industries showing comparatively large seasonal declines were canning $(15,100)$, sawmills $(6,700)$, beet sugar $(3,500)$, and men's clothing ( 1,800 ).

In retail trade the employment gain of 12.8 percent ( 440,000 workers) reflected the expansion necessary to handle holiday volume and was the most pronounced employment increase in this month during the last 10 years. In the general merchandising group (department, variety, and general merchandise stores and mail-order houses) the gain of 37.9 percent in employment brought the index for December to 144.1 percent of the 1929 average, the highest level shown during the past decade with the exception of December 1937, and represented a substantially larger gain than the usual December increase of 26 percent. Pronounced gains were also reported in the following lines of retail trade: Jewelry ( 21.4 percent); apparel (13.3 percent); furniture ( 5.2 percent); hardware (4.3 percent); drugs (3.4 percent); coal, wood, and ice ( 2.8 percent); cigars ( 2.5 percent); automotive ( 1.3 percent); and food ( 1.2 percent).

Wholesale trade showed a contraseasonal employment gain of 0.3 percent, or 3,200 persons. This increase brought the employment level for this industry to the highest point since February 1938. Among the important wholesale groups which shared in the increase were: Farm products ( 1.7 percent), paper and paper products (3.7
percent), automotive ( 0.8 percent), electrical ( 0.5 percent), furniture ( 0.7 percent), and groceries ( 0.1 percent). Among the wholesale lines reporting employment declines were food products, dry goods and apparel, and lumber and building materials.

The employment gain of 0.6 percent or 400 workers in metal mines continued the upward movement of the last 4 months and brought the employment level above that of any month since March 1938. Bituminous-coal mines took on 3,200 additional workers, while quarries and oil wells curtailed employment slightly less than seasonally, by approximately 4,000 workers. Anthracite mines showed an employment gain of 0.6 percent coupled with a pay-roll increase of 17.3 percent. Laundries and dyeing and cleaning plants reduced their forces seasonally by 0.3 percent and 4.5 percent, respectively. Telephone and telegraph companies curtailed their forces by 0.2 percent, electric light and power companies by 0.5 percent, and electric railroads by 0.3 percent. Year-round hotels reduced their staffs by 0.6 percent, which is less than usual for December.

Private building construction firms reported a decline of 6.7 percent in employment according to reports received from 15,137 contractors employing 121,428 workers. This was the smallest curtailment reported for December in the last 6 years with the exception of 1935. Corresponding pay rolls decreased 6.6 percent. Decreases in building construction employment were reported in each geographic division. The reports on which these figures are based do not cover construction projects financed by the Public Works Administration, the Works Progress Administration, and the Reconstruction Finance Corporation, or by regular appropriations of the Federal, State, and local Governments.

Average employment and pay rolls for the year 1938 were below those for 1937 for most of the major industrial groups surveyed monthly by the Bureau. In employment the outstanding decreases from 1937 to 1938 were 26 percent for the durable-goods group of manufacturing industries (nondurable goods showed a decline of 11 percent and manufacturing as a whole showed a drop of 18 percent), 26 percent for private building construction, 23 percent for metal mining, 18 percent for quarrying, 15 percent for brokerage, and 13 percent for coal mining. The pay-roll declines for these industries were equal to or more pronounced than the employment decreases. With the exception of the insurance industry which showed an employment gain of 2 percent and the telephone and telegraph industry, which showed a pay-roll gain of 3 percent, all of the remaining industries covered showed decreases. The declines ranged from 2 percent to 6 percent for employment and from less than 1 percent to 4 percent for pay rolls.

A preliminary report of the Interstate Commerce Commission indicated a decrease between November and December of 1.8 percent, or 17,620 in the number of employees on class I railroads. The total number reported in December was 943,082 . Corresponding pay-roll figures for December were not available when this report was prepared. For November they amounted to $\$ 149,011,526$ as against $\$ 155,270,047$ for October, a decrease of 4.0 percent.

* Hours and earnings.-The average hours worked per week by wage earners in manufacturing industries were 37.1 in December, an increase of 2.0 percent since November. The corresponding average hourly earnings were 64.8 cents, an increase of 0.5 percent as compared with the preceding month. Average weekly earnings increased 2.3 percent to $\$ 24.24$.
* Of the 14 nonmanufacturing industries for which man-hour data are available, 8 showed increases in average hours worked per week and 4 showed gains in average hourly earnings. Average weekly earnings were higher for 10 of the 16 nonmanufacturing industries surveyed.

Employment and pay-roll indexes and average weekly earnings in December 1938 for all manufacturing industries combined, for selected nonmanufacturing industries, and for class I railroads, with percentage changes over the month and year intervals except in the few industries for which data are not available, are presented in table 1.

## Public Employment

Employment on projects of the Public Works Administration showed an increase of 21,000 for the month ending December 15. The gains in the number working on projects financed from funds provided by the Public Works Administration Appropriation Act of 1938 were sufficiently great to offset declines in employment on P. W. A. projects financed from other funds. Of the 195,000 at work in December, 12,000 were working on Federal and non-Federal projects financed from National Industrial Recovery Act funds, 46,000 on non-Federal projects financed from funds provided by the Emergency Relief Appropriation Acts of 1935, 1936, and 1937, and 137,000 on Federal and non-Federal projects financed with funds provided by the Public Works Administration Appropriation Act of 1938. Pay-roll disbursements for the period amounted to $\$ 16,170,000$.

During the month ending December 15 more than 2,000 men were working on new construction and demolition projects of the United States Housing Authority; pay rolls amounted to $\$ 293,000$. These figures pertain only to new projects under the United States Housing Authority and not to those formerly under the Public Works Administration.

[^0]The seasonal decline in construction work, usual at this time of the year, was reflected in the drop of 25,000 in the number of men working on construction projects financed by regular Federal appropriations. Decreases in employment were reported for all types of projects with the following exceptions: Building construction, dredging, dikes, revetments, etc., ship construction, streets and roads, and miscellaneous projects. During the month ending December 15, 215,000 men were at work; pay rolls for the period amounted to \$20,191,000.

Nearly 3,000 men were working on construction projects financed by the Reconstruction Finance Corporation during the month ending December 15. Monthly pay rolls for this period amounted to $\$ 308,000$.

In December there was a drop from November of 226,000 in employment on projects operated by the Works Progress Administration. However, the number at work, $2,987,000$, was more than $1,316,000$ above the employment level of a year ago. Pay rolls for December 1938 amounted to $\$ 167,160,000$, a decrease of $\$ 5,214,000$ when compared with the preceding month but a gain of $\$ 82,447,000$ over the pay rolls for December 1937. There was a small increase in the number working on Federal projects under The Works Program during the month ending December 15. A gain of 12,000 in employment was reported on work projects of the National Youth Administration. Data on employment and pay rolls for Student Aid in December will not be available until next month.

In the regular services of the Federal Government increases in employment were reported in the number working in the executive, judicial, and military services; a decrease was shown for the legislative service. Of the 917,000 employees in the executive service in December, 120,000 were working in the District of Columbia and 797,000 outside the District. Force-account employees (employees who are on the Federal pay roll and are engaged on construction projects) were 10 percent of the total number of employees in the executive service. Increases in employment occurred in the Post Office Department, the Navy Department, and the administrative offices of the Public Works Administration. The following reported declines in employment: War, Interior, Agriculture, and the Tennessee Valley Authority.

As usual at the end of an enlistment period there was a decrease in employment in the Civilian Conservation Corps. In December 15,000 were dropped from the rolls, reducing the total number in camps to 321,000 . Of this total 284,000 were enrollees, 5,000 Reserve officers, 300 nurses, 1,600 educational advisers, and 30,000 supervisory and technical employees. For all groups of workers monthly pay-roll disbursements totaled $\$ 14,450,000$.

As a result of seasonal influences, employment on State-financed road projects declined during the month ending December 15. Of the 184,000 at work, 21,000 were employed on new road construction and 163,000 were engaged in maintenance work. Pay rolls for both types of road work were $\$ 11,439,000$.

A summary of Federal employment and pay-roll data for November and December is given in table 2.

[^1]${ }^{5}$ December data not available.
The value of material orders placed on projects financed from regular Federal appropriations during the fourth quarter of 1938 amounted to $\$ 95,778,000$. Approximately 243,000 man-months of labor were involved in the final fabrication of these materials. On P.W.A. projects orders were placed for $\$ 91,329,000$ worth of materials, for which it is estimated 267,000 man-months of labor were required in final fabrication processes.

The value of material orders placed on the various programs financed by Federal funds during the fourth quarter of 1938, the third quarter of 1938, and the fourth quarter of 1937, and the man-months of employment created in the final fabrication of the materials used are shown in table 3.

## DETAILED TABLES FOR DECEMBER 1938

## Industrial and Business Employment

MONTHLY reports on employment and pay rolls are available for the following groups: 87 manufacturing industries; 16 nonmanufacturing industries, including private building construction; and class I steam railroads. The reports for the first two of these groupsmanufacturing and nonmanufacturing-are based on sample surveys by the Bureau of Labor Statistics, and in virtually all industries the samples are large enough to be entirely representative. The figures on class I steam railroads are compiled by the Interstate Commerce Commission and are presented in the foregaing summary.

## EMPLOYMENT, PAY ROLLS, HOURS, AND EARNINGS

The indexes of employment and pay rolls as well as average hours worked per week, average hourly earnings, and average weekly earnings in manufacturing and nonmanufacturing industries in December 1938 are shown in table 4. Percentage changes from November 1938 and December 1937 are also given.

The indexes for the manufacturing industries have been adjusted to the 1935 Census of Manufactures and are not comparable to those published in the July 1938 and earlier issues of this pamphlet. Comparable indexes for earlier months and years are available on request. Electric- and steam-railroad repair shops have been excluded from the
new series in keeping with the reclassification for the 1937 Census of Manufactures.

The average hours worked per week, average hourly earnings, and average weekly earnings for all manufacturing industries combined now relate to 87 industries, instead of 89 as heretofore, because of the exclusion of electric- and steam-railroad repair shops. This exclusion also affects the averages for the durable-goods group because these industries were classified in that group. The average hours and hourly earnings for the 87 manufacturing industries combined, and for the manufacturing groups, are weighted on the basis of estimated employment for the separate industries. As these estimates have been affected by the revision of the indexes, it follows that the weighted averages for November and December differ from the averages that would result if the former estimates of employment were used as weights. Revised averages for earlier months will be computed and made available in the near future.

Table 4.-Employment, Pay Rolls, Hours, and Earnings in Manufacturing and Nonmanufacturing Industries, December 1938 MANUFACTURING
[Indexes are based on 3-year average, 1923-25=100, and are adjusted to 1935 Census of Manufactures. Not comparable to indexes published in pamphlets prior to August 1938 . Com-

1 Average weekly earnings are computed from figures furnished by all reporting establishments. Averago hours and average hourly earnings are computed irom data supplied by a smaller number of establishments, as all reporting firms do not furnish man-hours. The figures are not strictly comparable from month to month because of changes in the size and composition of the reporting sample. Hours and earnings for all manufacturing industries now relate 1087 industrics instcad of 89 which were covered in the July and prior issues of the pampblet. The two industries excluded are elcetric- and steam-railroad exclusion. See text in section headed "Employment, Pay Rolls, Hours, and Earnings." ${ }_{2}$ Not yet computed.
${ }^{3}$ Less than 3 io of 1 percent.
4 Indexes adjusted to 1935 census. Comparable series back to January 1929 presented in January 1938 issuo of this pamphlet.
${ }^{5}$ Average weekly earnings, hourly earnings, and hours not strictly comparable with figures published in pamphlets prior to January 1938 as they now exclude corporation offecrs, exceutives, and other employees whose duties are mainly supervisory.
puted. payments only; the additional value of board, room, and tips cannot be comprot available.

The indexes and averages for the iron and steel group and the nonferrous metal products group have been affected by the transfer of the stamped and enameled ware industry from the latter group to the former. The indexes, hours, and hourly earnings for the knit-goods industry are now weighted on the basis of four subdivisions (hosiery, knitted outerwear, knitted underwear, and knitted cloth) for which separate figures are now given. Tractor manufacturing establishments have been transferred from the engine, turbine, water wheel, and windmill industry to the agricultural implement industry, thereby affecting the figures for both industries.

The revised series of employment and pay-roll indexes, as well as average hours worked per week, average hourly earnings, and average weekly earnings for October, November, and December 1938, where available, are presented in table 5. The October and November figures, where given, may differ in some instances from those previously published, not only because of the foregoing, but also because of revisions necessitated by the inclusion of late reports and other causes.

The weekly average carnings shown in tables 4 and 5 are computed by dividing the total weekly pay rolls in the reporting establishments by the total number of full- and part-time employees reported. As all reporting establishments do not supply man-hour data, average hours worked per week and average hourly earnings are necessarily based on data supplied by a smaller number of reporting firms. The size and composition of the reporting sample varies slightly from month to month and therefore the average hours per week, average hourly earnings, and average weekly earnings shown are not strictly comparable from month to month. The sample, however, is believed to be sufficiently adequate in virtually all instances to indicate the general movements of earnings and hours over the period shown. The changes from the preceding month, expressed as percentages, are based on identical lists of firms for the 2 months, but the changes from December 1937 are computed from chain indexes based on the month-to-month percentage changes.

Table 5.-Employment, Pay Rolls, Hours, and Earnings in Manufacturing and Nonmanufacturing Industries MANUFACTURING
[Indexes are based on 3-year average, $1923-25=100$, and are adjusted to 1935 Census of Manufactures. Not comparable to indexes published in pamphlets prior to August 1938 . Comparable series available upon request]

${ }^{1}$ A verage weekly tarnings are computed from figures furnished by all reporting establishments. A verage hours and average hourly earnings are computed from data supplied by a smaller number of cstablishments, as all reporting firms do not furnish man-heurs. The figures are not strictly comparable from month to month because of changes in the size and composition of the reporting sample. Hours and earnings for all manufacturing industries now relate to 87 industries instead of 89 which were corered in the July and prior issues of the pamphlet. The 2 industries excluded are electric- and steam-railroat exclusion. See test in section headed, "Emplorment, pay rolls, hours, and earnings." 2 Iadexes adjusted to 1935 census. Comparable series back to January 1920 presented in January 1938 issue of this publication.

Average weekly earnings, hourly earnings, and hours not strictly comparable with
figures published in pamphlets prior to January 1938 as they now exclude corporation offieers, executives, and other employees whose duties are mainly supervisory 4 Cash payments only; the additional value of board, room, and tips cannot be eomputed.
SIndexes of employment and pay rolls are not available; percentage changes from pre-
ceding month substituted. ceding month substituted.
$i$ Percentage change in employment [rom August to September 1938 revised from +0.6 to -0.3 .
a September 1938 indexes for retail trade revised as follows: Total, employment 84.7 pay rol 69.4; general merchandising group, employment 97.0, pay roll 85.3.

## INDEXES OF EMPLOYMENT AND PAY ROLLS

Indexes of employment and pay rolls are given in table 6 for all manufacturing industries combined, for specified groups and subgroups of manufacturing industries, for each of 87 manufacturing industries, and for each of 13 nonmanufacturing industries, including 2 subgroups under retail trade, by years where available from 1923 to 1938, inclusive, and by months, from January 1938 to December 1938, inclusive. The accompanying chart indicates the trend of factory employment and pay rolls from January 1919 to December 1938.

The indexes of factory employment and pay rolls are based on the 3 -year average 1923-25 as 100 . They relate to wage earners only and are computed from reports supplied by representative manufacturing establishments in 87 manufacturing industries. These reports cover more than 55 percent of the total wage earners in all manufacturing industries of the country and more than 65 percent of the wage earners in the 87 industries included in the monthly survey of the Bureau of Labor Statistics.

The indexes for the nonmanufacturing industries are based on the 12 -month average for 1929 as 100 . Figures for mining, laundries, and dyeing and cleaning cover wage earners only, but the figures for public utilities, trade, and hotels relate to all employees, except corporation officers, executives, and other employees whose duties are mainly supervisory. For crude-petroleum producing they cover wage earners and clerical field force. The coverage of the reporting samples for the various nonmanufacturing industries ranges from 25 percent for wholesale trade to 90 percent for quarrying and nonmetallic mining.

Data for both manufacturing and nonmanufacturing industries are based on reports of the number of employees and amount of pay rolls for the pay period ending nearest the 15th of the month.

${ }^{1}$ Includes: Iron and steel, machinery, transportation eguipment, railroad repair shops, nonferrous metals, lumber and allied products, and stone, clay, and glass products.
${ }^{2}$ Includes: Textiles and their products, leather and its manufactures, food and kindred products, tobacco manufactures, paper and printing, chemicals and allied products, products of petroleum and coal, rubber products, and a number of miscellaneous industries not included in other groups.
8 Indexes for subdivisions under knit goods, namely hasiery, knitted onterwcar, knitted underwear, and knitted cloth, back to January 1923, a aailable on request.

## TREND OF INDUSTRIAL AND BUSINESS EMPLOYMENT, BY STATES

A comparison of employment and pay rolls, by States and geographic divisions, in November and December 1938 is shown in table 7 for all groups combined and for all manufacturing industries combined based on data supplied by reporting establishments. The percentage changes shown, unless otherwise noted, are unweighted-that is, the industries included in the manufacturing group and in the grand total have not been weighted according to their relative importance.

The totals for all manufacturing industries combined include figures for miscellaneous manufacturing industries in addition to the 87 manufacturing industries presented in table 4. The totals for all groups combined include all manufacturing industries, each of the nonmanufacturing industries presented in table 4 (except building construction), and seasonal hotels.

Similar comparisons showing only percentage changes are available in mimeographed form for "all groups combined," for "all manufacturing," for anthracite mining, bituminous-coal mining, metalliferous mining, quarrying and nonmetallic mining, crude-petroleum producing, public utilities, wholesale trade, retail trade, hotels, laundries, dyeing and cleaning, and brokerage and insurance.

Table 7.-Comparison of Employment and Pay Rolls in Identical Establishments in November and December 1938 by Geographic Divisions and by States
[Figures in italies are not compilod bs the Bureau of Labor Statistics, but are taken from reports issued by cooperating State organizations]

${ }^{1}$ Includes banks and trust companies; construction, municipal, agricultural, and office employment; amusement and recreation; professional services; and trucking and handling.
${ }^{2}$ Includes laundering and cleaning; and water, light, and power.
a Wcighted percentage change.

- Includes automobile and miscellaneous services; restaurants; and building and contracting.
${ }^{5}$ Includes construction but not public works.
- Does not include logging.

7 Includes banks; real estate; pipe-line transportation; trucking and transfers; railroads (other than repair shops); motor transportation (ather than operation and maintenance); water transportation; hospitals and clinies; personal, business, mechanical renair, and miscellaneous services; and building construction.
${ }^{y}$ Inchudes financial institutions, miscellaneous services, and restaurants.

- Weighted percentage change including hired farm labor.
${ }^{0} 0$ Less than 1,0 of 1 percent.
${ }^{11}$ Includes automohile dealers and garages; and sand, gravel, and building stone.
${ }^{18}$ Includes banks, insurance, and office cmploynient.

## INDUSTRIAL AND BUSINESS EMPLOYMENT IN PRINCIPAL METROPOLITAN AREAS

A comparison of employment and pay rolls in November and December 1938 is made in table 8 for 13 metropolitan areas which had a population of 500,000 or over in 1930 . Cities within these areas, but having a population of 100,000 or over, are not included. Data concerning them are presented in a supplementary tabulation which is available on request.

Footnotes to the table indicate which cities are excluded. The figures represent reports from cooperating establishments and cover both full- and part-time workers in the manufacturing and nonmanufacturing industries presented in table 4, with the exception of building construction, and include also miscellaneous industries.

Revisions made in the figures after they have gone to press, chiefly because of late reports by cooperating firms, are incorporated in the supplementary tabulation mentioned above. This supplementary tabulation covers these 13 metropolitan areas as well as other metropolitan areas and cities having a population of 100,000 or more according to the 1930 Census of Population.

Non-Federal projects financed from Public Works Administration Appropriation Act 1938 funds

[^5]Construction projects financed by the Public Works Administration are those projects authorized by title II of the National Industrial Recovery Act of June 16, 1933. This program of public works was extended to June 30, 1937, by the Emergency Relief Appropriation Act of 1935 and title II of the First Deficiency Appropriation Act of 1936. The First Deficiency Appropriation Act of 1936, cited as the Emergency Relief Appropriation Act of 1936, reappropriated unobligated funds originally made available under the Emergency Relief Appropriation Act of 1935 and authorized the use of $\$ 300,000,000$ from funds on hand or reccived from the sale of securities. The Public Works Administration was continued until July 1, 1939, by the Public Works Administration Extension Act of 1937 and the Public Works Administration Appropriation Act of 1938 further continued the program to June 30, 1941.

Federal construction projects for which data are included in table 10 are financed by allotments made by the Public Works Administration to the various agencies and departments of the Federal Government from funds provided under the National Industrial Recovery Act. The major portion of the low-cost housing program now under way, however, is financed by funds provided under the Emergency Relief Appropriation Act of 1935. Federal construction projects are
also financed by allotments from funds provided under the Public Works Administration Appropriation Act of 1938. The work is performed either by commercial firms which have been awarded contracts, or by day labor hired directly by the Federal agencies.

Non-Federal projects are financed by allotments made by the Public Works Administration from funds available under either the National Industrial Recovery Act, the Emergency Relief Appropriation Act of 1935, the First Deficiency Appropriation Act of 1936, the Public Works Administration Extension Act of 1937, or the Public Works Administration Appropriation Act of 1938. Most of the allotments have been made to the States and their political subdivisions, but occasionally allotments have been made to commercial firms. In financing projects for the States or their political subdivisions from funds appropriated under the National Industrial Recovery Act, the Public Works Administration makes a direct grant of not more than 30 percent of the total labor and material cost. When funds provided under the Emergency Relief Appropriation Act of 1935, the First Deficiency Appropriation Act of 1936, the Public Works Administration Extension Act of 1937, or the Public Works Administration Appropriation Act of 1938 are used to finance a non-Federal project, as much as 45 percent of the total cost may be furnished in the form of a grant. The remaining 55 percent or more of the cost is financed by the recipient. When circumstances justiry such action, the Public Works Administration may provide the grantee with the additional funds by means of a loun. Allotments to commercial enterprises are made only as loans. All loms made by the Public Works Administration carry interest charges and lave a definite date of maturity. Collateral posted with the Public Works Administration to secure loans may be offered for sale to the public. In this way a revolving fund is provided which enlarges the scope of the activitics of the Public Works Administration.

Commercial loans have been made, for the most part, to railroads. Railroad work financed by loans made by the Public Works Administration falls under three headings: First, construction work in the form of electrification, the laying of rails and ties, repairs to buildings, bridges, etc.; second, the building and repairing of locomotives and passenger and freight cars in shops operated by the railroads; and third, locomotives and passenger- and freight-car building in commercial shops.

## THE WORKS PROGRAM

By authority of Public Resolution No. 11, Seventy-fourth Congress, approved April 8, 1935, the President, in a series of Executive orders,
inaugurated a broad program of work to be carried out by 61 units of the Federal Government. The Works Program was continued by title II of the First Deficiency Appropriation Act of 1936, cited as the Emergency Relief Appropriation Act of 1936, and was further continued by the Emergency Relief Appropriation Act of 1937. The Emergency Relief Appropriation Act of 1938 extended this program to June 30, 1939. Employment created by this program includes employment on Federal projects and employment on projects operated by the Works Progress Administration. Federal projects are those conducted by Federal agencies which have received allotments from The Works Program fund. Projects operated by the Works Progress Administration are those projects conducted under the supervision of the Works Progress Administration with the cooperation of States, cities, or counties.
A record of employment, pay rolls, and man-hours worked on projects financed by The Works Program in December is shown in table 11, by type of project.

${ }^{1}$ Data are for a calendar month.
${ }^{2}$ Data on a monthly basis are not a vailable. This total represents expenditures through Sept. 30, 1938, and includes rentals and services and some sponsors' contributions.
${ }^{2}$ No expenditures for materials on this type of project.

- Student Ald program was not active.

## CIVILIAN CONSERVATION CORPS

The Civilian Conservation Corps was created by an act of Congress approved June 28, 1937, and succeeded the Emergency Conservation Work which had been set up in April 1933.

Employment and pay-roll data for the Civilian Conservation Corps are collected by the Bureau of Labor Statistics from the War Department, the Department of Agriculture, the Department of Commerce, and the Department of the Interior. The monthly pay of the enrolled personnel is $\$ 30$ per month. Assistant leaders, not to exceed 10 percent of the total number of enrollees, may receive up to $\$ 36$ per
month, and leaders, not to exceed 6 percent, may receive up to $\$ 45$ per month.

Employment and pay rolls in the Civilian Conservation Corps in November and December 1938 are presented in tab.e 13.

Table 13.-Employment and Pay Rolls in the Civilian Conservation Corps, November and December $1938{ }^{1}$
[Subject to revision]

| Group | Number of employees |  | Amount of pay rolls |  |

| Miscellaneous. | 2 | 59 | 58 | 1. 017 | 661 |

1 Data are for the month ending or the 15th.
2 Maximum number employed during any 1 week of the month by each contractor.
${ }^{3}$ Includes 241 employees; pay-roll disbursements of $\$ 19,499 ; 20,422$ man-hours worked; and material orders placed of $\$ 29,578$ on projects financed by RFC Mortgage Co.

## CONSTRUCTION PROJECTS FINANCED FROM REGULAR FEDERAL APPROPRIATIONS

When a construction contract is awarded or force-account work is started by a department or agency of the Federal Government, the

Bureau of Labor Statistics is immediately notified, on forms supplied by the Bureau, of the name and address of the contractor, the amount of the contract, and the type of work to be performed. Blanks are then mailed by the Bureau to the contractor or Government agency doing the work. These reports are returned to the Bureau and show the number of men on pay rolls, the amounts disbursed for pay, the number of man-hours worked on the project, and the value of the different types of materials for which orders were placed during the month.

Data concerning employment, pay rolls, and man-hours worked on construction projects financed from regular Federal appropriations during December are given in table 15, by type of project.

${ }^{1}$ Data are for the month ending on the 15th.
${ }^{2}$ Maximum number employed during any 1 week of the month by each contractor, and Government agency doing force-account work.
3 Includes weekly average for public-road projects.
4 Financed by Rural Electrification Administration loans.
${ }^{5}$ Under the jurisdiction of the Burean of Public Roads.

- Not available, weekly average included in total for all projects.

## STATE-ROADS PROJECTS

A record of employment and pay-roll disbursements in the construction and maintenance of roads financed wholly from State or local funds in December 1938, compared with November 1938, and December 1937, is presented in table 16.

Table 16.-Employment and Pay Rolls on Construction and Maintenance of State Roads, December 1938, November 1938, and December $1937{ }^{1}$

1 Data are for the month ending on the 15th and are for profects financed wholly from State or local funds.
${ }^{2}$ Average number working during month.

## PURCHASES FROM PUBLIC FUND ${ }^{1}$

The value of material orders placed on construction projects financed by Federal funds in the fourth quarter of 1938 is presented in table 17.

In the fourth quarter of 1938 on the Public Works Administration program, orders were placed for materials valued at approximately $\$ 91,329,000$. Of this amount $\$ 26,659,000$ was expended for iron and steel products, $\$ 13,554,000$ for cement and concrete products, $\$ 9,099,000$ for machinery, and $\$ 8,638,000$ for forest products.

Previous sections of this report have shown the number of workers employed at the site of construction projects financed from Federal funds. The direct employment, however, is only a partial picture, as the manufacture of the materials used on the projects also creates a large amount of employment.

Estimates have been made of the man-months of labor that have been, or will be created in fabricating the materials used on the various programs (see table 3). The estimates include only the labor required in the fabrication of material in the form in which it is to be used. No estimate is made of the labor required in producing the raw materials or in transporting them to the point of manufacture. In manufacturing structural steel, for example, the only labor included is that occurring in the fabricating mills; no estimate is made for the labor created in mining, smelting, and transporting the ore; nor for the labor in the blast furnaces, the open hearth furnaces, and the blooming mills.

The information concerning man-months of labor created in fabricating materials is obtained by sending a questionnaire to each firm receiving an award for materials to be financed from Federal or State funds. The manufacturer is requested to make an estimate of the number of man-hours created in his plant in manufacturing the materials specified in the contract. For materials purchased directly

[^8]by contractors the Bureau estimates the man-months of labor created. This estimate is based upon the findings of the Census of Manufactures, 1935.

In connection with the administration of the Public Contracts Act the Bureau of Labor Statistics has been collecting data on supply contracts awarded by Federal agencies of the United States for the manufacture or furnishing of materials, supplies, articles, and equipment in any amount exceeding $\$ 10,000$.

The first public contracts were awarded under the act in September 1936.

Table 22 shows the value of public contracts awarded under the act for materials during the fourth quarter of 1938, the third quarter of 1938, and the fourth quarter of 1937.

Table 22.-Value of Supply Contracts Awarded by the Federal Government, Which Contain Agreements To Comply With the Public Contracts Act, by Type of MaterialContinued

1 For period ending Dec. 31, 1038.
, For period ending Sept. 30, 1838. Revised.
For perlod ending Dec. 31, 1037. Revised.
Labor only. Materisls furnished by U. S. Government.
${ }^{1}$ Includes equipment rental, repairs, aerial surveys, etc.
The value of public contracts awarded for materials by Federal agencies totaled $\$ 56,744,000$ during the fourth quarter of 1938. Of the contracts awarded in the fourth quarter of $1938, \$ 26,013,000$ was for transportation equipment; $\$ 3,875,000$ for textiles and textile products; $\$ 3,408,000$ for asphalt, coal, and petroleum; and $\$ 3,212,000$ for iron and steel products.

[^0]:    ${ }^{1}$ Revised indexes. Adjusted to 1935 Census of Manufactures. Indexes for earlier months and years given in August issue of this pamphlet.
    ${ }^{2}$ Does not include railroad repair shops.
    ${ }^{8}$ Preliminary. Source: Interstate Commerce Commission.
    4 Not a vailable.
    ${ }^{3}$ Indexes adjusted to 1935 Census. Comparable series back to January 1929 presented in January 1938 issue of this pamphlet.
    B Average weekly earnings not strictly comparable with figures published in issues of this pamphlet dated earlier than January 1938, as they now exclude corporation oflicers, executives, and other employees whose duties are mainly supervisory.
    ${ }^{7}$ Cash payments only; the additional value of board, room, and tips cannot be computed.

[^1]:    1 Includes data on projects financed wholly or partially from Federal funds.
    ${ }^{2}$ Includes force-account and supervisory and tecbnical employees sbown under otber classifications to the extent of 125,033 employees and pay-roll disbursements of $\$ 14,681,831$ for December and $125,546 \mathrm{em}$ ployees and pay-roll disbursements of $\$ 14,814,599$ for November.
    ${ }^{3}$ Revised.
    4 Data covering P. W. A. projects financed from Emergency Relief Appropriation Acts of 1935, 1936, and 1937 funds and Public Works Administration Appropriation Act of 1938 funds are included. These data are not shown under The Works Program. Includes 46,049 wage earners and $\$ 4,106,952$ pay roll for December; 57,000 wage earners and $\$ 5,191,123$ for November, covering Public Works Administration projects financed from Emergency Telief Appropriation Acts of 1935, 1936, and 1937 funds. Includes 136,966 wage earners and $\$ 10,747,455$ pay roll for December; 101,590 wage earners and $\$ 8,085,341$ pay roll for November, covering Public Works Administration projects financed from funds provided by the Public Works Administration Appropriation Act of 1038.
    ${ }^{3}$ Includes 241 employees and pay-roll disbursements of $\$ 19,499$ for December; 347 employees and pay-roll disbursements of $\$ 35,177$ for November on projects financed by the RFC Mortgage Co.

[^2]:    ${ }^{\prime}$ Data covering projects financed from E. R. A. A. 1935, 1936, 1937, and P.W. A. A. 1938 funds are included. These data are not shown under The Works Program. Includes low-cost housing projects financed from funds of N. I. R. A. and E. R. A. A., 1935
    ${ }_{2}^{2}$ Includes RFC Mortgage Co.

    - Data not available.

[^3]:    

[^4]:    ${ }^{1}$ Does not include Elizabeth, Jersey City, Newark, or Paterson, N. J., nor Yonkers, N. Y.
    , Does not include Gary, Ind.
    3 Does not include Camden, N. J.
    4 Does not include Iong Reach, Calif.
    Figures relate to city of Boston only.

    - Does not include Oakland, Calif.

[^5]:    1 Data are for the month ending on the 15th.
    ${ }^{2}$ Maximum number employed during any one week of the month by each contractor and Copernment agency doing force-account work.
    ${ }^{8}$ Includes weetly av erage for public roads.
    $\{$ Under the jurisdiction of the liareau of Publie Roads.

    - Not available; weekly average included in total for all projects.
    - Includes data for workers engaged in construction of underground tunnel who, because of the addttional risk involved, were paid at rates higher than those usually paid for building construction.
    ${ }^{7}$ These data are also included in separate tables covering projects financed by The Works Program.
    ${ }^{8}$ Includes a maximum of 207 and an average of 180 employees working on low-eost housing projects financed from E. R. A. A. 1935 funds who were paid $\$ 9,230$ for 16,392 man-hours of habor. Material orders in the amount of $\$ 225,914$ were placed for these projects. These data are also included in separate tables covering projects financed from The Works Program.

[^6]:    Sce footnotes at end of table.

[^7]:    1 Unless otherwise noted data are for the month ending on the 15th.
    Maximum number employed during any 1 week of the month by each contractor and Government agency doing force-account work.
    ${ }_{3}$ The data for the Bureau of Entomology and Plant Quarantine, under plant, crop, and livestock conservation, and the Bureau of Forest Service, under forestry, are for the calendar month.

    4 These data are for projects under the jurisdiction of the Bureau of Public Roads.
    These data are for projects under construction in Puerto Rico.
    Includes data for 45,842 employees working on non-Federal projects and 207 employees working on lowcost housing projects. These data are included in separate tables covering projects under the jurisdiction of the Pubiic Works Administration.
    ${ }_{7}$ Data are for the calendar month. Not available by type of project.

    - Represents number of names on pay roll for week ending Dec. 31, 1938.
    - Data on a monthly basis are not available.

[^8]:    ${ }^{1}$ Unless otherwise speoifled, data presented in this section are as of the 15 th of the month.

[^9]:    ${ }^{1}$ This table includes certain items which are not actually construction materials, i. e., fuel, transportation equipment, tools, furniture, etc. Data for projects operated by W. P. A. are not a vailable.
    Includes material orders placed on Public Works Administration projects financed by the Emergency Relief Appropriation Acts of 1935, 1936, and 1937, and P. W. A. A. 1038 runds. Data on low-cost housing prolects financed from N. I. R. A. and E. R. A. A. 1935 funds are also included.
    ${ }^{2}$ Includes projects financed by RFC Mortgage Co.

[^10]:    ${ }^{1}$ This table includes certain items which are not actually construction materials, i. e., fuel, transportation equipment, tools, furniture, etc.
    ${ }^{2}$ Includes material orders placed on Public Works Administration projects financed by the Emergency Relief Appropriation Acts of 1935, 1936, and 1937, and P. W. A. A. 1938 funds. Data on low-cost housing projects financed from N. I. R. A. and E. R. A. A. 1935 funds are also included.
    ${ }^{3}$ Includes projects financed by RFC Mortgage Co.

[^11]:    See footnotes at end of table.
