Serial No. R. 72

# TREND OF EMPLOYMENT 

## December 1933

THE Bureau of Labor Statistics of the United States Department of Labor presents herewith data compiled from pay-roll reports supplied by representative establishments in 89 of the principal manufacturing industries of the country and 16 nonmanufacturing industries, covering the pay period ending nearest the 15th of the month. Additional information is presented concerning employment on publicworks projects, public roads, the Federal service, and class I steam railroads.

## Employment in Selected Manufacturing Industries in December 1933

Comparison of Employment and Pay-Roll Totals in December 1933 with November 1933 and December 1932

FACTORY employment decreased 1.8 percent in December 1933 as compared with November 1933 and pay rolls decreased 1 percent over the month interval, according to reports received from representative establishments in 89 important manufacturing industries of the country. Comparing the indexes of employment in December 1933 and December 1932, the level of employment in the former month is 20.2 percent above the level in December 1932. The December 1933 pay-roll index, compared with the December 1932 pay-roll index indicates an increase of 32.1 percent in pay rolls over the corresponding month of the preceding year.

The index of employment in December 1933 was 70.1, as compared with 71.4 in November 1933, 74 in October 1933 and 58.3 in December 1932; the pay-roll index in December 1933 was 49.8, as compared with 50.3 in November 1933, 53.6 in October 1933, and 37.7 in December 1932. The 12 -month average for 1926 equals 100.

These changes in employment and pay rolls in December 1933 are based on reports supplied by 18,015 establishments in 89 of the principal manufacturing industries of the United States. These establishments reported 3,125,093 employees on their pay rolls during the pay period ending nearest December 15 whose combined weekly earnings were $\$ 56,352,943$. The employment reports received from these cooperating establishments cover approximately 50 percent of the total wage earners in all manufacturing industries of the country

Declines in factory employment in December as compared with November have been recorded in 7 of the 10 preceding years for which data are available. The decrease, therefore, in employment over the
month interval is not unexpected, although the decline of 1.8 percent in December is greater than the average decrease of 0.8 percent shown in December over the 10 -year period 1923-32. The decrease of 1 percent in pay rolls in December 1933 is contrary to the average change in pay rolls between November and December over the preceding 10 -year period (an average increase of less than one tenth of 1 percent).

This percentage decrease in factory employment between November and December represents the release of approximately 113,000 workers from gainful employment in manufacturing establishments over the month interval. The percentage decline in pay rolls reduces the estimated amount of weekly wages disbursed in December by $\$ 880,000$ as compared with November.

The index of factory employment in December 1933 compared with the March employment index (55.1) shows a gain of 27.2 percent in employment over this 9 -month interval. A similar comparison of the pay-roll indexes in these 2 months indicates an increase in December of 49.1 percent over the March pay-roll index (33.4). These percentage gains indicate an increase in actual number of workers over this interval of approximately $1,338,000$ and in weekly pay rolls of approximately $\$ 36,200,000$.

Increases in employment were reported in 25 of the 89 manufacturing industries surveyed, and 37 incustries reported increases in pay rolls over the month interval. While 64 industries reported decreased employment, a number of the decreases were of seasonal character, the clothing industries regularly reporting declines in employment at this time of year as do the industries connected with building construction, i.e., brick, cement, sawmills, millwork, and steam fittings. Other seasonal declines were reported in the confectionery, ice cream, baking, flour, shoe, paper box, stove, and furniture industries. The most pronounced gains in both employment and pay rolls between November and December were in the automobile industry, in which increases of 16.7 percent in employment and 16.3 percent in pay rolls were reported. These sharp increases reflect the increased operations in automobile plants, marking the production of new models. The electric- and steam-car building industry reported a gain of 11.9 percent in employment and a corresponding gain in payroll totals, and the agricultural implement industry reported an increase of 9.2 percent in number of workers with a larger gain in earnings. The most pronounced decline in employment over the month interval ( 19.7 percent) was reported in the men's furnishings industry. The stove industry reported a drop of 15.4 percent in number of employees, and the radio and cement industries reported decreases of 11.6 and 11.3 percent, respectively. Decreases in employment ranging from 10 to 10.6 percent were reported in the shirt
and collar, women's clothing, cane-sugar refining, and confectionery industries. The highly seasonal beet-sugar industry reported a decrease of 9 percent in employment, denoting the slackening in operations following the November peak activities.
Two of the 14 groups into which the manufacturing industries are classified showed gains in employment between November and December, the remaining 12 groups reporting decreased employment over the month interval. The increase in employment in the transportation group was quite pronounced ( 14.4 percent) and was due primarily to sharp increases in employment in the automobile, electric- and steam-car building, and shipbuilding industries. The increase in employment in the paper and printing group was small ( 0.3 percent) and was due to increased employment in the book and job and the newspaper and periodical printing industries, which more than offset. the declines in employment in the paper box and the paper and pulp industries. The most pronounced decline in employment ( 6 percent) over the month interval in the 12 groups reporting decreased employment was shown in the tobacco manufactures group, in which decreases in both the cigar and cigarette and the chewing and smoking tobacco industries were reported. The textile group reported a decline of 4.8 percent in employment between November and December, each of the 14 industries in this group reporting decreased employment. A number of the decreases in this group were seasonal. The lumber group reported a decrease of 4.5 percent in employment, due chiefly to declines in the furniture and sawmill industries, and the nonferrous metals group reported a decrease of 3.4 percent, each of the eight industries comprising this group reporting decreased employment. The food group reported a decrease of 3 percent in employment between November and December, due largely to seasonal declines in the confectionery, ice cream, beet sugar, and baking industries. The rubber products group reported a decrease of 2.9 percent, due chiefly to the sharp decline in the rubber goods, other than shoes and tires, industry, and the stone-clay-glass group reported a decrease of 2.6 percent reflecting the seasonal declines in the brick, cement, and marble-slate-granite industries. The railroad repair shop group reported a decrease of 2.2 percentin employment between November and December. The iron and steel and machinery groups reported decreases of 1.6 percent each. In the former group, the iron and steel industry reported a decrease of 1.3 percent in employment, coupled with an increase of 1.9 percent in pay rolls, reflecting improved operating time in certain plants, while in the latter group, the foundry and machine-shop and the electrical-machinery industries reported decreases of 1.9 and 1.4 percent, respectively. Among the industries which reported increased employment in this last-named group are two industries, agricultural implements and machine tools, in which
the changes are of especial significance. Both of these industries have shown consistent expansion since the early part of this year, and while still employing only approximately 50 percent of the number normally employed in the industry, have reached in December the highest point registered in these industries since 1931.

A comparison of the indexes of employment and pay roll in manufacturing industries in December 1933 with December 1932 shows that 81 of the 89 industries surveyed reported increased employment over the year interval while 82 industries had increased pay rolls. The beverage industry showed the most pronounced gain in employment over the year interval, 120.3 percent, due to legalizing the manufacture of beer. Other outstanding percentage gains in employment over the year interval were shown in radios, typewriters, fertilizers, agricultural implements, machine tools, textile machinery, forgings, and engines-turbines-tractors. Increases in employment ranging from 35 to 46.1 percent were reported in the turpentine and rosin, glass, chemicals, smelting, plumbers' supplies, wirework, iron and steel, aircraft, cash registers, stoves, carpets, tools, rubber tires, and sawmill industries. Decreases in both employment and pay roll over the 12 -month period were reported in seven industries-women's clothing, corsets and allied garments, men's furnishings, millinery, electric-railroad repair shops, marble-granite-slate, and cigars and cigarettes. The shirt and collar industry reported a decrease in employment in December 1933, compared with December 1932, coupled with an increase in pay rolls.

In table 1, which follows, are shown the number of identical establishments reporting in both November and December 1933 in the 89 manufacturing industries surveyed, together with the total number of employees on the pay rolls of these establishments during the pay period ending nearest December 15, the amount of their earnings for 1 week in December, the percentages of change over the month and year intervals, and the indexes of employment and pay roll in December 1933.

The monthly percentages of change for each of the 89 separate industries are computed by direct comparison of the total number of employees and of the amount of weekly pay roll reported in identical establishments for the 2 months considered. The percentages of change over the month interval in the several groups and in the total of the 89 manufacturing industries are computed from the index numbers of these groups, which are obtained by weighting the index numbers of the several industries in the groups by the number of employees or wages paid in the industries. The percentages of change over the year interval in the separate industries, in the groups and in the totals, are computed from the index numbers of employment and pay-roll totals.

TABLE 1.-COMPARISON OF EMPLOYMENT AND PAY ROLLS IN MANUPACTUEINE ESTABLIBHMENTS IN DECEMBER 1933 WITH NOVEMBER 1933 AND DECEMBER 1932

## Per Capita Earnings in Manufacturing Industries

Per capita weekly earnings in December 1933 for each of the 89 manufacturing industries surveyed by the Bureau of Labor Statistics and for all industries combined, together with the percentages of change in December 1933 as compared with November 1933 and December 1932, are shown in table 2.

These earnings must not be confused with full-time weekly rates of wages. They are per capita weekly earnings, computed by dividing the total amount of pay roll for the week by the total number of employees (part-time as well as full-time workers).

[^0]TABLE 2.-PER CAPITA WEEKLY EARNINGS IN MANUFACTURING INDUSTRIES IN DECEMBER 1933 AND COMPARISON WITH NOVEMBER 1933 AND DECEMBER 1932

## General Index Numbers of Employment and Pay-Roll Totals in Manufacturing Industries

General index numbers of employment and pay-roll totals in manufacturing industries, by months, from January 1926 to December 1933, inclusive, together with average indexes for each of the years from 1926 to 1933, inclusive, are shown in the following table. In computing these general indexes the index numbers of each of the separate industries are weighted according to their relative importance in the total.

Table 3.-GENERAL INDEXES OF ÉMPLOYMENT AND PAY ROLLS IN MANUFACTURING INDUSTRIES, JANUARY 1926 TO DECEMBER 1933
[12-month average, 1926=100]

| Month | Employment |  |  |  |  |  |  |  | Pay rolls |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| October--- | 100.7 | 95.3 | 95.9 | 98. 4 | 79.9 | 68.9 | 59.9 | 74.0 | 102.9 | 95.2 | 99.0 | 102. 4 | 74.0 | 55.3 | 39.9 | 53.6 |
| November | 99.5 | 93.5 | 95. 4 | 95. 0 | 77.9 | 67.1 | 59.4 | 71.4 | 99.6 | 91.6 | 96.1 | 95. 4 | 69.6 | 52.5 | 38.6 | 50.3 |
| December. | 98.9 | 92.6 | 95.5 | 92.3 | 76. 6 | 66.7 | 58.3 | 70.1 | 99.8 | 93.2 | 97.7 | 92.4 | 68.8 | 52.2 | 37.7 | 49.8 |
| Average | 100.0 | 86.4 | 93.8 | 97.5 | 84.7 | 72.2 | 80.1 | 64.6 | 100.0 | 96.5 | 94.5 | 100.5 | 81.3 | 61.5 | 41.6 | 44.0 |

Index numbers showing relatively the variation in employment and pay rolls for each of the 89 industries included in the Bureau's survey, for each of the 14 groups of industries, and for all manufacturing industries combined, are shown in table 4, by months, for the years of 1931, 1932, and 1933, together with average indexes for each of the years from 1923 through 1933, where available.

The expansion of the Bureau's employment survey in 1931 to include 35 additional manufacturing industries, affected the comparability of certain group indexes over the entire period. The group indexes for years prior to 1931 are therefore not presented in the following tables except where the index numbers are strictly comparable with the group indexes now published.

The average general index of employment for the 12 months of 1933 for the 89 industries combined was 7.5 percent above the average index for 1932, and the pay-roll index was 5.8 percent higher than the average index for 1932.

Following table 4 are two charts which show the course of employment and pay-roll totals in all manufacturing industries combined for each month of the years 1926 to 1933, inclusive.

TABLE 4-INDEXES OF EMPLOYMENT AND PAY ROLLS IN MANUFACTURING IND US TRIES-YEARLY AVERAGES 1923 THROUGH 1933 AND BY MONTHS JANUARY 1931 THROUGH DECEMBER 1933

## Time Worked in Manufacturing Industries December 1933

Reports as to working time in December were received from 14,486 establishments in 89 manufacturing industries. Of these establishments 3 percent were idle, 67 percent operated on a full-time basis, and 31 percent worked on a part-time schedule.

An average of 92 percent of full-time operation in December was shown by reports received from all the operating establishments included in table 5. The establishments working part time in December averaged 75 percent of full-time operation.

## Employment in Nonmanufacturing Industries in December 1933

INCREASED employment in December, as compared with November, was reported in 6 of the 15 nonmanufacturing industries surveyed monthly by the Bureau of Labor Statistics and increased pay rolls were reported in 10 industries. Data for the building-construction industry are not presented here but are shown in more detail under the section "Building construction."

The most pronounced percentage gains in employment and pay rolls over the month interval were shown in the retail-trade industry. Reports received from 19,062 retail establishments indicated a net increase of 15.1 percent in employment and 10.6 percent in pay rolls in these establishments between November 15 and December 15. These pronounced percentage gains are due largely to seasonal fluctuations in the group of retail establishments composed of department, variety, general merchandise stores and mail-order houses, in which the Christmas trade resulted in an increase of 23.1 percent in employment and 17.6 percent in pay rolls. The remaining retail establishments surveyed showed a gain of 1.2 percent in employment over the month interval combined with an increase of 0.7 percent in pay rolls. The crude-petroleum-producing industry reported gains of 3.8 percent in employment and 5.7 percent in pay rolls, and the hotel industry reported increases of 2.4 percent in number of workers and 4.2 percent in pay rolls. The bituminous-coal mining and the telephone and telegraph industries reported increases in employment of 0.8 percent each combined with smaller gains in pay rolls, and the metalliferous-mining industry reported an increase of less than one tenth of 1 percent in employment combined with an increase of 2.6 percent in pay rolls. The most pronounced declines in employment and pay rolls in this group of nonmanufacturing industries were seasonal declines. The canning industry reported decreases of 28.7 percent in employment and 23.2 percent in pay rolls. The quarrying and nonmetallic-mining industry reported a seasonal decrease of 11.3 percent in employment and 13.7 percent in pay rolls. Employment in the anthracite-mining industry decreased 10.6 percent between November and December and the dyeing and cleaning industry reported a decline, largely seasonal, of 7.3 percent. The power and light industry reported a decrease of 1 percent in employment. In the remaining four industries in which decreases in employment occurred (electric-railroad and motor-bus operation, wholesale trade, banks-brokerage-insurance-real-estate, and laundries), the decreases were three tenths of 1 percent or less.

Eleven of the 15 nonmanufacturing industries appearing in the following table reported increased employment and pay rolls between December 1932 and December 1933, the canning, crude-petroleum,
and metalliferous-mining industries reporting the largest percentage gains in employment over the year interval. Four industries (electric-railroad and motor-bus operation and maintenance, laundries, anthracite mining, and telephone and telegraph) reported fewer employees and smaller pay-roll totals in December 1933 than in December 1932.

In the following table are presented employment and pay-roll data for the nonmanufacturing industries surveyed, exclusive of building construction.

TABLE 1.-COMPARISON OF EMPLOYMENT AND PAY ROLLS IN NONMANUFACTURING ESTABLISHMENTS IN DECEMBER 1933 WITH NOVEMBER 1933 AND DECEMBER 1932

${ }^{1}$ Less than one tenth of 1 percent.
? The additional value of board, room, and tips cannot be computed.
${ }^{3}$ Weighted.
Per capita weekly earnings in December 1933 for 15 nonmanufacturing industries included in the Bureau's monthly trend-ofemployment survey, together with the percents of change in December 1933 as compared with November 1933 and December 1932, are given in the table following. These per capita weekly earnings must not be confused with full-time weekly rates of wages; they are per capita weekly earnings computed by dividing the total amount of pay roll for the week by the total number of employees (part-time as well as full-time workers).

TABLE 2.-PER CAPITA WEEKLY EARNINGS IN 15 NONMANUFACTURING INDUSTRIES IN DECEMBER 1933 AND COMPARISON WITH NOVEMBER 1933 AND DECEMBER 1932

## Indexes of Employment and Pay-Roll Totals for Nonmanufacturing Industries

Index numbers of employment and pay-roll totals for 15 nonmanufacturing industries are presented in the following table. These index numbers show the variation in employment and pay rolls by months, from January 1930 to December 1933, in all nonmanufacturing industries except the laundry, dyeing and cleaning, and the banks, brokerage, insurance, and real-estate industries for which information over the entire period is not available. The Bureau has secured data concerning employment and pay rolls for the index base year 1929 from establishments in these industries and has computed index numbers for those months for which data are available from the Bureau's files. These indexes are shown in this tabulation.

TABLE 3.-INDEXES OF EMPLOYMENT AND PAY ROLLS FOR NONMANUFACTURING INDUSTRIES, JANUARY TO DECEMBER 1930, 1931, 1932, AND 1933
[12-month average, $1929=100$ ]

| Average..-- | 89.4 | 80.1 | 75.6 | 84.4 | 67.0 | 56.8 | 92. 7 | 81.4 | 80.5 | 80.3 | 60.5 | 52.3 | 98.3 | 97.8 | 89.7 | 84. 6 |

A comparison of the yearly average indexes of employment for 1932 and 1933 indicates that employment in four of the 15 nonmanufacturing industries was higher in 1933 than in 1932. These four industries were canning and preserving, crude-petroleum producing, retail trade, and bituminous-coal mining. The increases in employment in the canning and preserving and the crude-petroleum-producing industries were pronounced, while the 1933 average indexes of employment in retail trade and bituminous-coal mining were only slightly above the 1932 level. Yearly indexes of pay rolls were higher in 1933 than in 1932 in only two industries, canning and preserving and bituminous-coal mining. The greatest decrease in employment in the comparison of these annual averages was shown in the anthracite-mining industry in which the 1933 average index was 17.3 percent below the average of the year 1932. Other large percentage declines in employment in this comparison were shown in the telephone and telegraph (11 percent), quarrying and nonmetallic mining ( 8.4 percent), and electric-railroad and motor-bus operation and maintenance ( 7.3 percent). Employment in 1933 in the metalliferous mining, power and light, hotel, and laundry industries ranged from 5.1 to 5.6 percent below the annual average of 1932. The decreases in employment in the remaining three industries in which the 12 -month averages for 1933 were below the 1932 averages were small. The most pronounced decrease in pay rolls in this comparison was in the telephone and telegraph group ( 15.9 percent), although the decreases in the quarrying, hotel, and laundry industries were only slightly less.

## Average Man-Hours Worked and Average Hourly Earnings

IN THE following tables the Bureau presents a tabulation of man-hours worked per week and average hourly earnings based on reports supplied by identical establishments in November and December 1933 in 15 industrial groups and 78 separate manufacturing industries. Man-hour data for the building-construction group and for the insurance, real estate, banking, and brokerage group are not available, and data for several of the 89 manufacturing industries surveyed monthly are omitted from these tables due to lack of adequate information.

The total number of establishments supplying man-hour data in these 15 industrial groups represents approximately 50 percent of the establishments supplying monthly employment data.

The tabulations are based on reports supplying actual man-hours worked and do not include nominal man-hour totals, obtained by multiplying the total number of employees in the establishment by the plant operating time.

Table 1 shows the average hours worked per employee per week and average hourly earnings in 15 industrial groups and for all groups combined. The average hours per week and average hourly earnings for the combined total of the 15 industrial groups are weighted averages, wherein the average man-hours and average hourly earnings in each industrial group are multiplied by the total number of employees in the group in the current month and the sum of these products divided by the total number of employees in the combined 15 industrial groups. The average man-hours and hourly earnings for the combined 89 manufacturing industries have been weighted in the same manner as the averages for all industrial groups combined, table 1.
In presenting information for the separate manufacturing industries shown in table 2, data are published for only those industries in which the available man-hour information covers 20 percent or more of the total number of employees in the industry at the present time.

TABLE 1-AVERAGE HOURS WORKED PER WEEK PER EMPLOYEE AND AVERAGE HOURLY EARNINGS IN 15 INDUSTRIAL GROUPS, NOVEMBER AND DECEMBER 1933

| Industrial group | Average hours per week |  | A verage hourly earnings |  |
| :---: | :---: | :---: | :---: | :---: |

Per capita weekly earnings, computed by multiplying the average man-hours worked per week by the average hourly earnings, are not identical with the per capita weekly earnings appearing elsewhere in this trend-of-employment compilation, which are obtained by dividing the total weekly earnings in all establishments reporting by the total number of employees in those establishments. As already noted, the basic information upon which the average weekly manhours and average hourly earnings are computed covers approximately 50 percent of the establishments reporting monthly employment data.

TABLE R--AVERAGE HOURS WORKED PER WEEK PER EMPLOYEE AND AVERAGE HOURLY EARNINGS IN SELECTED MANUFACTURING INDUSTRIES, NOVEMBER AND DECEMBER 1933-Continued

## Employment in Building Construction in December 1933

EMPLOYMENT in the building-construction industry decreased 17.7 percent in December as compared with November and pay rolls decreased 19.7 percent over the month interval.

The percent of change in employment and pay-roll totals in December as compared with November are based on returns made by 10,840 firms engaged on public and private projects not aided by public-works funds. These firms employed in December 67,768 workers in the various trades in the building-construction industry whose combined weekly earnings during the pay period ending nearest December 15 were $\$ 1,448,123$. These reports cover building operation in various localities in 34 States and the District of Columbia.

## Trend of Employment in December 1933, by States

IN THE following table are shown the fluctuations in employment and pay-roll totals in December 1933 as compared with November 1933, in certain industrial groups by States. These tabulations have been prepared from data secured directly from reporting establishments and from information supplied by cooperating State agencies. The combined total of all groups does not include building-construction data, information concerning which is published elsewhere in a separate tabulation by city and State totals. In addition to the combined total of all groups, the trend of employment and pay rolls in the manufacturing, public utility, hotel, wholesale trade, retail trade, bituminous-coal mining, crude-petroleum producing, quarrying and. nonmetallic mining, metalliferous mining, laundry, and dyeing and cleaning groups is presented. In this State compilation, the totals of the telephone and telegraph, power and light, and electric-railroad operation groups have been combined and are presented as one group-public utilities. Due to the extreme seasonal fluctuations in the canning and preserving industry, and the fact that during certain months the activity in this industry in a number of States is negligible, data for this industry are not presented separately. The number of employees and the amount of weekly pay roll in November and December 1933 as reported by identical establishments in this industry are included, however, in the combined total of "all groups."

The percents of change shown in the accompanying table, unless otherwise noted, are unweighted percentages of change; that is, the industries included in the groups, and the groups comprising the total of all groups, have not been weighted according to their relative importance in the combined totals.

The State totals for the anthracite-mining industry, which is confined entirely to the State of Pennsylvania, will be found in table 1 , nonmanufacturing industries.

When the identity of any reporting company would be disclosed by the publication of a State total for any industrial group, figures for the group do not appear in the separate industrial-group tabulation, but are included in the State totals for "all groups." Data are not presented for any industrial group when the representation in the State covers less than three establishments.

## COMPARISON OF EMPLOYMENT AND PAY ROLLS IN IDENTICAL ESTABLISHMENTS IN NOVEMBER AND DECEMBER 1933, BY STATES

[Figures in italies are not compiled by the Burean of Labor Statistics, but are taken from reports issued by cooperating State organizations]

## Employment and Pay Rolls in December 1933 in Cities of Over 500,000 Population

IN THE following table are presented the fluctuations in employment and pay-roll totals in December 1933 as compared with November 1933 in 13 cities of the United States having a population of 500,000 or over. These changes are computed from reports received from identical establishments in each of the months considered.

In addition to including reports received from establishments in the several industrial groups regularly covered in the Bureau's survey, excluding building construction, reports have also been secured from other establishments in these cities for inclusion in these totals. Information concerning employment in building construction is not available for all cities at this time and therefore has not been included.

## Employment in the Various Branches of the Federal Government, December 1933

THERE were 591,675 employees on the pay rolls of the executive departments of the United States Government on December 31, 1933. This is an increase of 27,572 employees or 4.9 percent as compared with December 31, 1932, and an increase of 3,640 employees or 0.6 percent, as compared with November 30, 1933.

The information shown in table 1 is compiled by the various departments and offices of the United States Government and sent to the United States Civil Service Commission where it is assembled. The figures were tabulated by the Bureau of Labor Statistics and are published here in compliance with the direction of Congress.

Table 1 shows the number of employees in the executive departments of the Federal Government inside of the District of Columbia,
the number outside the District of Columbia, and the total number of such employees.

Approximately 12 percent of the workers in the executive branch of the United States Government are located in the city of Washington.

${ }^{1}$ Not including field employees of the Post Office Department.
Comparing December 1933 with December 1932, there was an increase of 9,148 or 13.8 percent in the number of employees on the pay rolls of the executive departments of the United States Government in the District of Columbia. The number of permanent employees increased 4.2 percent while temporary employees increased over 300 percent during the same period. The increase in the number of temporary employees is due to the creation of the emergency Government units such as the Public Works Administration, National Recovery Administration, Agricultural Adjustment Administration, etc.

Comparing December 1933 with November 1933, there was an increase of 1.6 percent in the number of permanent employees, an increase of 17.2 percent in the number of temporary employees, and an increase of 3.2 percent in total employment in the executive departments in the District of Columbia.

The turnover rate for the entire executive service within the District of Columbia was 1.97.

Outside of the District of Columbia the number of permanent employees decreased 1.1 percent and the number of temporary employees increased 81.2 percent, comparing December 1933 with December 1932.

Comparing December 1933 with November 1933, there was an increase of 0.8 percent in the number of permanent employees
and an increase of 4.2 percent in the number of temporary employees, making a net increase of 0.3 percent in employment in the executive Federal departments outside of the District of Columbia.

The pay roll for the executive departments throughout the United States for the month of November was $\$ 75,977,254$. December pay rolls totalled $\$ 80,414,086$.

Table 2 shows employment in the executive departments of the United States, by months, for the calendar year 1933.

TABLE 2.-EMPLOYMENT IN THE EXECUTIVE DEPARTMENTS OF THE UNITED STATES BY MONTHS, 1933, FOR DISTRICT OF COLUMBIA, OUTSIDE DISTRICT OF COLUMBIA, AND TOTALS

| Months | District of Columbia | Outside <br> District of CO lumbia | Totals | Months | District of Columbia | Outside District of Co . lumbia | Totals |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| January. | 66, 800 | 496, 361 | 563, 161 | July | 66, 062 | 488,990 | 555, 052 |
| February | 66, 802 | 496,685 | 563,487 | August | 67, 715 | 488, 624 | 556, 338 |
| March | 67,557 | 499, 429 | 566,986 | September | 69, 740 | 496, 616 | 566, 356 |
| April | 67, 063 | 501, 665 | 588, 728 | October | 71, 054 | 506,116 | 577, 170 |
| May | 66,560 | 507, 346 | 573,906 | November | 73, 131 | 514,904 | 588, 035 |
| June. | 65,437 | 499,995 | 565, 432 | December | 75, 450 | 530, 512 | 591,675 |

The high point in employment in the executive departments of the Federal Government for 1933 occurred in December. The peak employment both inside and outside the District occurred that month.

The low point in employment during 1933 occurred in July, when there were 555,052 on the pay rolls of the executive departments throughout the United States. The low for the District of Columbia occurred in June, while outside the District of Columbia fewer people were on the pay rolls in August than any other month of the year.

Table 3 shows the number of employees and amounts of pay rolls in the various branches of the United States Government during November and December 1933.

## Employment on Class I Steam Railroads in the United States

REPORTS of the Interstate Commerce Commission for class I railroads show that the number of employees (exclusive of executives and officials) decreased from 985,434 on November 15, 1933, to 952,275 on December 15, 1933, or 3.4 percent. Data are not yet available concerning total compensation of employees for December 1933. The latest pay-roll information available shows a decrease from $\$ 121,981,119$ in October to $\$ 114,470,607$ in November, or 6.2 percent.

The monthly trend of employment from January 1923 to December 1933 on class I railroads-that is, all roads having operating revenues of $\$ 1,000,000$ or over-is shown by index numbers published in the following table. These index numbers are constructed from monthly reports of the Interstate Commerce Commission, using the 12 -month average for 1926 as 100 .

## Wage-Rate Changes in American Industries

Manufacturing Industries

THE following table presents information concerning wage-rate adjustments occurring between November 15 and December 15, 1933, as shown by reports received from manufacturing establishments supplying employment data to this Bureau.
Increases in wage rates averageing 10.2 percent and affecting 40,212 employees were reported by 174 of the 18,015 manufacturing establishments surveyed in December. Twenty-one establishments in the slaughtering and meat packing industry reported wage-rate increases averaging 10 percent and affecting 15,732 employees. Thirty-eight establishments in the paper and pulp industry reported increases in wage rates also averaging 10 percent and affecting 6,747 employees. Increased wage rates averaging 7.8 percent and affecting 7,143 employees were reported in 3 rayon establishments between November and December. Nine establishments in the
automobile industry reported increased wage rates averaging 9.1 percent and affecting 3,222 employees. Increases in wage rates averaging 12.6 percent and affecting 1,694 employees were reported in the foundry and machine-shop products industry. Two establishments in the soap industry reported wage-rate increases averaging 10.1 percent and affecting 1,202 employees. In each of the remaining establishments which reported wage rate increases in December, the employees affected numbered less than 1,000 .

Of the 18,015 manufacturing establishments included in the December survey, 17,820 establishments, or 98.9 percent of the total, reported no change in wage rates over the month interval. The 3,084,213 employees not affected by changes in wage rates constituted 98.7 percent of the total number of employees covered by the December trend-of-employment survey of manufacturing industries.

Twenty-one manufacturing establishments in 11 industries reported wage-rate decreases affecting 668 employees between November and December.

Nonmanufacturing Industries
Data concerning wage-rate changes occurring between November 15 and December 15, 1933, reported by cooperating establishments in 15 nonmanufacturing industries are presented in the following table.

No changes in wage rates were reported in the anthracite mining, metalliferous mining, crude-petroleum producing, and telephone and telegraph industries. Increases were reported in each of the remaining 11 industries and decreases were reported in 6 industries over the month interval. Wage-rate increases averaging 12.6 percent and affecting 1,747 employees were reported in the hotel industry. Increases averaging 17.1 percent and affecting 1,611 employees were reported in the bituminous coal-mining industry. The other increases or decreases in rates were not of especial significance.

## Employment Created by the Public-Works Fund

THE $\$ 3,300,000,000$ public-works fund was voted by Congress to create employment throughout the United States. It is the duty of the Bureau of Labor Statistics to publish each month the number of wage earners, the amounts of pay rolls, and the number of man-hours worked by persons employed from this fund.

Allotments for construction projects awarded by the Public Works Administration are divided into two groups-first, Federal allotments, and second, non-Federal allotments.

Projects to be built from Federal allotments are financed wholly by public-works funds. They are built either by force account (that is the Federal department which has charge of the work hires the laborers directly) or contracts are awarded to commercial firms by the Federal departments. They include such types of construction as post-office buildings; Federal courthouses; naval vessel; river, harbor, and flood-control projects; reclamation projects; and forestry service. They are supervised entirely by representatives of the Federal Government. Whenever a contract is awarded by one of the

Federal agencies the name and address of the contractor, type of project, and the amount of the contract is at once furnished the Bureau of Labor Statistics. A copy of the Bureau's form BLS 742 is then sent to each contractor asking for the number of wage earners employed, the amounts of pay rolls, and the number of man-hours worked, as well as the total amount of expenditures for materials for all pay-roll periods ending between the 15th of the past month and the 15 th of the current month. The primary contractor also furnishes the names and addresses of the subcontractors. The Bureau in turn mails its questionnaires to each subcontractor. For work done under force account the Federal agency doing the work supplies the Bureau each month with the same information as is obtained from the contractors.

Information concerning non-Federal projects is obtained from the State engineers of the Public Works Administration. For the most part non-Federal projects are confined to building construction (such as school buildings, city and county buildings, housing projects, etc.), street and road paving, and water and sewerage plants. The Public Works Administration makes a direct grant of 30 percent of the total cost of non-Federal work, and in many cases will loan the remaining: 70 percent.

Table 1 shows, by types of project, employment, pay rolls, and man-hours worked during December 1933 on projects financed from public-works funds.

1 Data not available.
${ }^{2}$ Other than those reported by the Bureau of Public Roads.
${ }^{3}$ Includes $\$ 1,133,578$ worth of material which cannot be charged to any specifie type of project.

* Excluding data for Bureau of Public Roads

There were 267,990 employees directly engaged in construction projects financed by public-works funds during the month ending December 15, 1933. These figures exclude all clerks and office workers.

More than half of the total employment under public-works construction projects were engaged in building roads under the direction of the Bureau of Public Roads of the Department of Agriculture. Nearly 50,000 men were working on river, harbor, and flood-control projects, and over 20,000 in forestry work. Building construction employed nearly 18,000 workers.

The pay rolls for workers on all types of projects amounted to more than $\$ 15,000,000$. Workers on public roads received over $\$ 8,500,000$; workers on river, harbor, and flood-control projects nearly $\$ 2,500,000$; and forestry workers over $\$ 1,200,000$. On no other type of construction projects were the workers paid as much as $\$ 1,000,000$.

Data concerning man-hours were not obtained from the Bureau of Public Roads. Excluding workers on public roads, there were 115,846 employees on public-works construction projects. The average hourly earnings of these employees for the month of December was approximately 58 cents. Workers engaged on naval vessels received the highest hourly pay, earning nearly 77 cents per hour. The next highest hourly earnings were received by workers on building construction, where the rate paid was nearly 70 cents per hour. Workers on reclamation projects and water and sewerage systems received over 60 cents per hour. In no other case was the rate of pay less than 51 cents per hour.

The average hours worked during the month (excluding publicroads projects) was 96.8 . Workers constructing naval vessels put in 139 hours per month, those on reclamation projects 130 hours per month, and those on miscellaneous projects 127 hours per month. No other type of work averaged as much as 100 hours per month.

Expenditures for materials during the month totaled over $\$ 13,000,000$. Contractors on river, harbor, and flood-control work spent approximately 30 percent of this total.

Table 2 shows employment, pay rolls, and man-hours worked during December on projects financed from public-works funds, by geographic divisions.

1 Excluding data for public roads which are not available.
${ }^{2}$ Including data for 48 wage earners which cannot be charged to any specific geographic division.
${ }^{3}$ Includes $\$ 1,133,578$ worth of material which cannot be charged to any specific geographic division.
Of the 267,990 wage earners paid from public-works funds, more than 47,000 were working in the West North Central States during December. Nearly 42,000 were working in the West South Central States, and more than 30,000 each in the South Atlantic and Mountain States. Fewer workers were employed in the New England States than in any other geographic division.

Pay rolls reached a total of over $\$ 2,000,000$ in the West North Central States, the West South Central States, and the Mountain States. New England was the only geographic division having a pay roll of less than $\$ 1,000,000$.

Since data on man-hours were not available for public-roads work, the average earnings per hour as shown in the tables are for projects other than those under the supervision of the Bureau of Public Roads.

The Pacific Division had the highest hourly rate, 72 cents. Workers in the New England, Middle Atlantic, East North Central, and South Atlantic divisions averaged 60 cents per hour or more. The lowest hourly rate, 48 cents, was shown in the East South Central States.

Material orders placed by contractors in the East South Central and the West South Central States reached a higher total than any other geographic division.
Table 3 shows expenditures for materials during the month ending December 15, 1933, by types of material.

TABLE 3.-MATERIALS PURCHASED DURING MONTH ENDING DEC. 15, 1933, FOR PUBLIC-WORKS PROJECTS, BY TYPE OF MATERIAL

${ }^{1}$ Excluding material purchased by Bureau of Public Roads.
During the month ending December 15, 1933, expenditures for materials by contractors on public-works projects, other than those working under the jurisdiction of the Bureau of Public Roads, totaled over $\$ 13,000,000$. Expenditures for steel products totaled over $\$ 3,000,000$; expenditures for stone products, and for lumber and timber products totaled over $\$ 1,000,000$.

It is estimated that the fabrication of materials purchased during this month will create approximately 40,000 man-months of labor.

Table 4 shows data concerning employment, pay rolls, and manhours worked during each of the three months for which employment has been created by projects financed by public-works funds.

TABLE 4.-EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED DURING OCTOBER, NOVEMBER, AND' DECEMBER' 1933 ON PROJEOTS FINANCED FROM PUBLIC WORKS FUNDS

| Item | 1833 |  |  |
| :---: | :---: | :---: | :---: |
|  | October | November | December |

${ }^{1}$ Includes estimated pay roll for Bureau of Public Roads.
${ }^{2}$ Excluding data of Bureau of Public Roads.
In October there were slightly more than 120,000 employees working on public works projects. This number was more than doubled during November, while December showed an increase of approximately 16,000 as compared with the previous month.

Pay rolls were not available for public road work during October. The Bureau estimated the October pay roll at $\$ 5,646,000$. Pay rolls for other types of construction totaled slightly over $\$ 1,500,000$. During November and December total pay roll figures are available. Disbursements for this purpose totaled over $\$ 14,000,000$ in November and more than $\$ 15,000,000$ in December.

Materials purchases for the 3 months entailed an expenditure of more than $\$ 35,000,000$.

## Civil Works Administration

The Public Works Administration, early in November, made an allotment of $\$ 400,000,000$ to the Civil Works Administration. This money was to be used in providing jobs during the winter to people who were out of work. The greater part of the civil works employees were taken from the relief rolls throughout the United States. The people from the civil works rolls have now been given employment on needed projects and are entirely self supporting.

It is some time after a contract is awarded before the maximum employment is reached on the type of projects included under the regular Public Works Administration. The Civil Works Administration is giving jobs to people to bridge these gaps. Employees from the civil works rolls are engaged at the present in repairing buildings and bridges, in street and road work, working on slum clearance projects, landscaping, and mosquito eradication.

Table 5 shows the number of civil works employees on the pay rolls for weeks ending December 2, 1933, and January 18, 1934, as well as the pay roll for the week ending January $18,1934$.

Table 5.-CIVIL WORKS EMPLOYEES DECEMBER 2, 1933, AND JANUARY 18, 1934

| Geographic division |  |
| :--- | :--- | :--- | :--- | :--- |

During the week ending January 18, 1934, over 4,000,000 employees drew pay for work on civil-works projects. This is an increase of nearly $2,500,000$ or 126 percent as compared with December 2. These employees were paid over $\$ 61,000,000$ for work performed during the week ending January 18, 1934.

The number of employees shown in the above table are those in the continental United States who drew pay during the week ending January 18, 1934. It does not represent the total number of people on public-works pay rolls for two reasons. In some localities the stagger system is used. That is, work is provided for a definite number of employees, and since it is impossible for the employers to provide jobs for all these employees at one time, one half are given jobs for one week and the other half the following week. This means that in some localities twice as many persons are given jobs as would draw pay for a given week. Weather conditions also affect employment, as most of the jobs are outside work and may be "rained out" for an entire week, therefore no pay would be drawn for that period.

No data are shown for localities outside the continental United States, although many people are doing work in outlying territories.

## Emergency Conservation Work

Employees on the rolls of the Emergency Conservation Work are now paid by allotments made from Public Works Fund.

Table 6 shows the employment and pay rolls in the Emergency Conservation Work during the months of November and December 1933.

TABLE 6.-EMPLOYMENT AND PAY ROLLS IN THE EMERGENCY CONSERVATION WORK, NOVEMBER AND DECEMBER 1933

| Group | Number |  | Pay rolls |  |
| :---: | :---: | :---: | :---: | :---: |
|  | November | December | November | December |
| Enrolled personnel. | 296, 026 | 288, 855 | \$9, 244, 887 | \$9,020, 943 |
| Reserve officers, line- | 3,494 1,085 | 3, 781 | 783, 682 | (1) |
| Supervisory and technical | 14, 054 | 13, 168 | 1,657,575 | 1,362,724 |
| Carpenters and laborers. | 26, 054 | 11,343 | 2, 400, 304 | 1, 215, 637 |
| Total. | 340, 713 | 317,735 | 14, 086, 448 | ${ }^{2}$ 11, 599, 304 |

There was a decrease of more than 10,000 people engaged in Emergency Conservation Work comparing December with November. This decrease was largely caused by the completion of the erection of cabins for winter quarters of the Civilian Conservation Corps, although there was a slight falling off in both the enlisted personnel and supervisory and technical force. There was an increase in line Reserve officers but a decrease in medical Reserve officers.

Information concerning employment and pay rolls in the Emergency Conservation Work is collected by the Bureau of Labor Statistics from the War Department, the Department of Agriculture, and the Department of the Interior.

The pay of the enlisted personnel is $\$ 30$ per month, except that 5 percent of the personnel of each company are paid $\$ 45$ and an additional 8 percent are paid $\$ 36$ per month. The pay roll of this branch of the service is figured on this basis.

The carpenters and laborers shown in the above table are constructing barracks to be used as winter quarters by the Civilian Conservation Corps. This work is practically finished. However, the construction of recreation buildings in a number of the camps has been started which will engage the services of a number of building tradesmen during the months of January and February.

Table 7 shows the monthly totals of the employees and pay rolls of the Emergency Conservation Work from the inception of the work in May to December 1933.

TABLE 7.-MONTHLY TOTALS OF EMPLOYEES AND PAY ROLLS IN THE EMERGENCY CONSERVATION WORK FROM MAY 1933 TO DECEMBER 1933

| Months | Employebs | Pay roll | Months | Employees | Pay roll |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Mountain | 3,650 | 1,525 | 286, 126 | 117, 174 | 6, 065 | 8,167 | 507, 396 | 538, 683 |
| Pacific | 2,656 | 919 | 224, 126 | 74,761 | 12,249 | 8,607 | 1,122, 817 | 765, 774 |
| Total ...... | 38, 112 | 21,345 -44.0 | 2,124,565 | $\begin{array}{r} 1,134,726 \\ -46.7 \end{array}$ | 234, 132 | 187,623 -19.9 | 15, 193, 804 | $\begin{array}{r} 10,228,360 \\ -32.7 \end{array}$ |

${ }^{1}$ Excluding employment furaished by projects financed from Public Works Fund.
The number of employees engaged in Federal road building financed under the old State-aid law decreased 44 percent comparing December with November. It should be borne in mind that practically all of the new contracts awarded for road building are now financed from Public Works Fund.

There was an increase in the number of employees working on Federal road work financed from Public Works Fund comparing these two months. (See table 1, p. 61.) Pay rolls for Federal road projects other than public works, decreased 46.6 percent in December as compared with the previous month. There was a decrease of 19.9 percent in the number of employees engaged in road work financed by State governments. December pay rolls for these men decreased 32.7 percent as compared with November.

Seventy-five and one tenth percent of the workers engaged on State roads were working on maintenance and only 24.9 percent in building new roads.
