# TREND OF EMPLOYMENT 

## Trend of Employment, September 1934

THE Bureau of Labor Statistics of the United States Department of Labor presents herewith data compiled from pay-roll reports supplied by representative establishments in 90 of the principal manufacturing industries of the country and 18 nonmanufacturing industries, covering the pay period ending nearest the 15th of the month. Additional information is presented concerning employment on Public Works Administration projects, public roads, the Federal service, and class I steam railroads.

## Manufacturing Industries

Factory employment decreased 4.7 percent from August to September and factory pay rolls declined 6.8 percent over the month interval.

While 44 of the 90 manufacturing industries surveyed each month reported gains in employment from August to September and 1 industry reported no change, the increases in employment in these industries were not sufficient to offset the declines in the remaining 45 industries. Forty-three industries showed gains in pay rolls and the remaining 47 had decreases.

Normally there is a seasonal expansion in employment and pay rolls between August and September. Labor disturbances in September, particularly in certain textile industries, combined with recessions in employment in such important industries as automobiles, hardware, boots and shoes, blast furnaces, steel works, rolling mills, and foundries and machine shops contributed largely to these contraseasonal decreases.

The general indexes of factory employment and pay rolls for September 1934 are 75.8 and 57.9 , respectively. A comparison of these indexes with those of September 1933 shows decreases over the year interval of 5.2 percent in employment and 2 percent in pay rolls.

The Bureau recently revised its indexes of factory employment and pay rolls. The base now used in computing these index numbers is. the average for the 3 -year period, $1923-25$, taken as 100 . This new series of indexes has been adjusted to conform to census trends over the period 1919-31. Prior to March 1934 the indexes of factory employment and pay rolls published by the Bureau of Labor Statistics:
were based on the 12 -month average of 1926 and were not adjusted to conform to biennial census trends. A short discussion of this revision appeared in the March 1934 Trend of Employment and a more complete bulletin on this subject is being prepared for publication. The August 1934 group and general indexes of factory employment and pay rolls on the 1926 base are shown in this pamphlet under the heading "Index numbers of employment and pay-roll totals in manufacturing industries."

The indexes of factory employment and pay rolls are computed from data supplied by representative establishments in 90 important manufacturing industries of the country. Reports were received in September from 24,441 establishments employing $3,459,617$ workers, whose weekly earnings were $\$ 64,157,969$ during the pay period ending nearest September 15. The employment reports received from these cooperating establishments cover more than 50 percent of the total wage earners in all manufacturing industries of the country.

The most pronounced gains in employment over the month interval were seasonal increases in the following industries: Cottonseedoil, cake, and meal, 35.6 percent; confectionery, 30.2 percent; fertilizer, 31.1 percent; millinery, 16.1 percent; jewelry, 12.1 percent; and women's rlothing, 10 percent. In the last-named industry pay rolls remained practically unchanged from August to September, reflecting the ohservance of the Jewish holidays during the September 15 pay period. The slaughtering and meat-packing industry continued to show substantial gains, due to the receipt of Government cattle for slaughter.

Employment in the men's furnishing goods and in the shirt and collar industries increased 7.5 and 6.4 percent, respectively, from August to September. The machine-tool industry reported a gain of 5.4 percent in employment and the canning and the clock industries reported increases in employment 5.2 and of 5.1 percent, respectively. The beet-sugar industry reported a seasonal increase in employment of 4.8 percent from August to September and the pottery, stoves, and druggist preparation industries reported gains of 4.4 percent each. Other industries employing large numbers of workers which reported employment gains over the month interval were furniture ( 3.3 percent), paper boxes (3 percent), flour ( 2.6 percent), newspapers ( 2 percent), book and job printing ( 1.5 percent), men's clothing (1.2 percent), electrical machinery ( 0.9 percent), paper and pulp ( 0.6 percent), and sawmills ( 0.5 percent).

The effect of the textile strike was reflected in the marked declines in employment shown in the cotton goods, woolen and worsted goods, silk and rayon goods, and dyeing and finishing textile industries. The decreases in employment in these industries between August 15 and September 15 were as follows: Woolen and worsted, 47.8 percent;
cotton, 41.4 percent; silk and rayon, 21.3 percent; and dyeing and finishing textiles, 9.5 percent. Employment in the aluminum manufactures industry declined 15 percent over the month interval. Pay rolls in this industry, however, showed a gain of 1.3 percent from August to September due to the resumption of plant operations following strikes in several localities.

Employment in the steam- and electric-car-building industry declined 13.2 percent over the month interval and the ice-cream industry reported a seasonal decrease of 12.9 percent. Decreases of 12.6 percent in employment and 29 percent in pay rolls were reported in the automobile industry. The hardware and aircraft industries reported decreases in employment of 10.8 and 11.2 percent, respectively, coupled with more pronounced declines in pay rolls.

Comparing the levels of employment and pay rolls in the 90 separate industries in September 1934 with those of September 1933, 46 industries showed increased employment over the year interval and 52 showed increased pay rolls.

Dividing the manufacturing industries into "durable" and "nondurable" goods groups, the former group showed decreases in employment and pay rolls from August to September of 2.9 and 8.8 percent, respectively. The latter group showed losses of 6.2 percent in employment and 4.9 percent in pay rolls. The "durable" goods group is composed of the following subgroups: iron and steel, machinery, TRANSPORTATION EQUIPMENT, RAILROAD REPAIR SHOPS, NONFERROUS METALS, LUMBER AND ALLIED PRODUCTS, AND STONE-CLAY-GLASS.

Per capita weekly earnings for all manufacturing industries combined fell 2.2 percent from August to September and rose 3.4 percent from September 1933 to September 1934. Gains from August to September were shown in 39 of the 90 individual manufacturing industries surveyed and ranged from 0.4 to 19.2 percent.

The per capita earnings shown in the following table must not be confused with full-time weekly rates of wages. They are per capita weekly earnings, computed by dividing the total amount of pay roll for the week by the total number of employees (part-time as well as full-time workers).

Man-hour data supplied by identical establishments in August and September 1934 showed a decrease over the month interval for all manufacturing industries combined of 2.1 per cent in average hours worked per week and an increase in average hourly earnings of 0.7 percent. Thirty-four of the industries covered showed increases in average hours worked and 51 reported increased hourly earnings. As all reporting establishments do not furnish man-hour information, the Bureau's figures on average hours worked per week and average hourly earnings are necessarily computed from data furnished by a smaller number of establishments than are covered in the monthly
survey of manufacturing industries. Average hours worked per week and average hourly earnings are presented for only those manufacturing industries for which available information covers at least 20 percent of all the employees in the industry.

In table 1, which follows, are shown indexes of employment and pay rolls in September 1934 for each of the 90 manufacturing industries surveyed, for the 14 major groups and 2 subgroups into which these industries are classified, and for manufacturing as a whole, together with percentage changes from August 1934 and September 1933. Per capita weekly earnings in September 1934, together with percentage changes from the previous month and from September of the previous year for each of the 90 manufacturing industries and for manufacturing as a whole, are also presented in this table. Average hours worked per week in September 1934 and average hourly earnings, together with percentage changes from August 1934 and September 1933, are likewise presented for manufacturing as a whole and for each industry for which man-hour data covering at least 20 percent of the total employees in the industry were received.

TABLE 1--EMPLOYMENT, WEEKLY PAY ROLLS, PER CAPITA WEEKLY EARNINGS, AVERAGE HOURS WORKED PER WEEK, AND AVERAGE HOURLY EARNINGS IN MANUFACTURING INDUSTRIES IN SEPTEMBER 1934 AND COMPARISON WITH AUGUST 1934 AND SEPTEMBER 1933

1 Per capita weekly earnings are computed from figures furnished by all reporting establishments. A verage hours and average hourly earnings are computed from data furnished by a smaller number of establishments as some firms do not report man-hour information. Figures for groups not computed. Percentage changes over year on per capita weekly also computed from indexes. also computed from indexes
${ }_{2}^{2}$ Weighted.
${ }^{1}$ Less than Yo of 1 percent.

## Estimated Number of Wage Earners and Weekly Pay Rolls in Manufacturing Industries

In the following table are presented the estimated number of wage earners and weekly pay rolls in all manufacturing industries combined and in the 14 groups into which these manufacturing industries have been classified, for the years 1919 to 1933, inclusive, and for the first 9 months of 1934. These estimates have been computed by multiplying the weighting factors of the several groups of industries (number employed or weekly pay roll in the index base period 1923-25) by the Bureau's index numbers of employment or pay rolls (which have been adjusted to conform with census trends over the period 1919-31) and dividing by 100. Data are not available for all groups over the entire period shown. The totals for all manufacturing industries combined, however, have been adjusted to include all groups. The estimated total employment and weekly pay rolls for all manufacturing industries combined do not include the manufac-tured-gas industry (which is included in the Bureau's electric light and power and manufactured-gas industry) or the motion-picture industry.

TABLE 2.-ESTIMATED NUMBER OF WAGE EARNERS AND WERKLY WAGES IN ALI, MANUFACTURING INDUSTRIES COMBINED AND IN INDUSTRY GROUPS-YEARLY AVERAGES 1919 TO 1933, INCLUSIVE, AND MONTHS, JANUARY TO SEPTEMBER 1934, INCLUSIVE

1 Average for 9 months.
For comparative purposes the Bureau has computed the group and general index numbers of employment and pay rolls for September 1934 based on the 12 -month average for 1926 as 100 . These are a continuation of the former series of indexes covering 89 industries and show some slight differences in percentage changes from the previous month when compared with those shown by the revised series. These differences are due to changes in method of construction and weighting factors and to the inclusion of the canning and preserving industry in the revised series of indexes. These indexes on the 1926 base are presented in table 4, which follows.
[A verage for $1926=100$ ]

| Group | Employment index | Pay-roll index |
| :---: | :---: | :---: |
| Total manufacturing. | 69.4 | 51.5 |

## Employment in Nonmanufacturing Industries in September 1934

Gains in employment from August to September were shown in 6 of the 17 nonmanufacturing industries surveyed monthly by the United States Bureau of Labor Statistics and increases in pay rolls were reported in 5. Data for the building-construction industry are not presented here, but are shown in detail under the section, Building Construction.

The most pronounced gains in employment and pay rolls ( 15 percent and 18.4 percent, respectively) were in the anthracite-mining industry, reflecting seasonal activity and the resumption of operations in a number of mines which had previously been affected by labor troubles. Employment in retail trade, based on reports received from 57,762 establishments employing 861,635 workers in September, showed a gain of 7 percent over the month interval, and pay rolls increased 5.2 percent. The general merchandise group, composed of department stores, variety stores, general merchandise stores, and mail-order houses, showed a seasonal increase of 12.7 percent in employment and 10.6 percent in pay rolls, while in the remaining 52,978 retail establishments employment increased 3 percent and pay rolls gained 2.2 percent. The dyeing and cleaning industry reported 1.8 percent more employees in September than in August and 4.1 percent larger pay rolls.

Employment in bituminous-coal mining increased 1.4 percent, reflecting seasonal demands, wholesale trade establishments reported a gain of 1.2 percent, and electric light and power and manufactured gas showed an increase of 0.2 percent. While 11 of the nonmanufacturing industries reported decreased employment, the declines in 6 instances were less than 1 percent. The most pronounced decrease in employment ( 3.7 percent) was in brokerage establishments, which (with the exception of a small increase in February 1934) have reported declines in employment each month since September of last year. The quarrying and nonmetallic mining industry reported a decrease of 2.6 percent in employment, and the hotel industry showed a decline of 2.1 percent, reflecting the closing of seasonal resort hotels.

In table 1, which follows, are shown indexes of employment and pay rolls, per capita weekly earnings, average hours worked per week, and average hourly earnings in September 1934 for 13 of the nonmanufacturing industries surveyed monthly by the Bureau of Labor Statistics, together with percentage changes from August 1934 and September 1933. Similar percentage changes in employment; pay rolls and per capita weekly earnings, as well as per capita weekly earnings are also presented for banks, brokerage, insurance, and real estate. Indexes of employment and pay rolls for these indurtries are not available.

1 Per capita weekly earnings are computed from figures furnished by all reporting establishments. Average hours and average hourly earnings are computed from data furnished by a smaller number of establishments as some firms do not report man-hour information. Percentage changes over year computed from indexes.
${ }_{3}{ }^{2}$ No change.
${ }^{3}$ July average hours and percentage change from June revised to 40.7 and +1.2 , respectively. August average hours changed to 40.3 . Average hourly earnings revised to 51.4 in July and 52.4 in August.

4 The additional value of board, room, and tips cannot be computed.
${ }^{5}$ Not available.

Indexes of Employment and Pay-Roll Totals for Nonmanufacturing Industries
Index numbers of employment and pay-roll totals for 13 nonmanufacturing industries are presented in table 2. These index numbers show the variation in employment and pay rolls in these industries, by months, from January 1931 through September 1934.

A revision of the indexes, similar to that made for the manufacturing industries, was made for the laundry and the dyeing and cleaning industries in March 1934. The indexes of employment and pay rolls in these industries were adjusted to conform with the trends shown by the 1929 and 1931 census reports and this new series will be continued until further adjustments, if necessary, are made when 1933 census data become available.

TABLE R. -INDEXES OF EMPLOYMENT AND PAY ROLLS FOR NONMANUFACTURING INDUSTRIES, JANUARY 1931 TO SEPTEMBER 1934
[12-month average, $1929=100$ ]

| Month | Anthracite mining |  |  |  |  |  |  |  | Bituminous-coal mining |  |  |  |  |  |  |  |

## Employment in Building Construction in September 1934

The percentage changes in employment, pay rolls, and man-hours in building construction in September as compared with August were as follows:

| Total employment | $\begin{aligned} & \text { Percent } \\ & +1.8 \end{aligned}$ |
| :---: | :---: |
| Total pay rolls. | +1.8 |
| Total man-hours worked. | +1.9 |
| Average weekly earnings |  |
| Average hours per week per man_ | -. 3 |
| Average hourly earnings | +. 6 |

The following table is based on returns made by 10,939 firms engaged in public and private building-construction projects not aided by Public Works Administration funds. These reports include all trades, from excavation through painting and interior decoration, which are engaged in erecting, altering, or repairing buildings. Work on roads, bridges, docks, etc., is omitted. The reports cover building operations in various localities in 34 States and the District of Columbia.

For purposes of comparison in this study, all reports were reducedto a 1 -week basis if not originally so reported.
In September the weekly pay roll for 85,120 workers amounted to $\$ 1,972,620$ as compared with $\$ 1,938,489$ earned by 83,648 workers employed by the identical firms in August.

In September the average weekly earnings were $\$ 23.17$, the same as the earnings of workers employed by the identical firms in August. These are per capita weekly earnings, computed by dividing the total

[^3]amount of the weekly pay roll by the total number of employeespart time as well as full time.

Reports from 10,491 firms- 95.9 percent of the 10,939 cooperating firms- gave the man-hours worked by the employees, namely, 2,305 ,794 in September as compared with $2,263,275$ in August.

The average hours per week per man-29 in September and 29.1 in August-were computed by dividing the number of man-hours by the number of workers employed by those firms which reported man-hours.

The average hourly earnings- 80.1 cents in September and 79.6 cents in August were computed by dividing the pay roll of those firms which reported man-hours, by the number of man-hours.

EMPLOYMENT, PAY ROLLS, AVERAGE WEEKLY EARNINGS, AVERAGE HOURS PER WEEK PER MAN, AND AVERAGE HOURLY EARNINGS IN THE BUILDING-CONGTRUCTION INDUSTRY IN SEPTEMBER 1934, AND PERCENTAGE CHANGES FROM AUGUST 1834

EMPLOYMENT, PAY ROLLS, AVERAGE WEEKLY EARNINGS, AVERAGE HOURS PER WEEK PER MAN, AND AVERAGE HOURLY EARNINGS IN THE BUILDING-CONSTHUCTION INDUSTRY IN SFPTEMBER 1934, AND PERCENTAGE CHANGES FROM AUGUST 1934-Continued.

[^4]
## Trend of Employment in September 1934, by States

Fluctuations in employment and pay-roll totals, in September 1934, as compared with August 1934, in certain industrial groups are shown by States in the following table. These tabulations have been prepared from data secured directly from reporting establishments and from information supplied by cooperating State agencies. The combined total of all groups does not include building-construction data, which are shown by city and State totals in the section, Building Construction. In addition to the combined total of all groups, the trend of employment and pay rolls in the manufacturing, public utility, hotel, wholesale trade, retail trade, bituminous-coal mining, crude-petroleum producing, quarrying and nonmetallic mining, metalliferous mining, laundry, dyeing and cleaning, and banks, brokerage, insurance, real-estate groups is presented. In this State compilation, the totals of the telephone and telegraph, power and light, and electric-railroad operation groups have been combined and are presented as one group-public utilities.

The percentage changes shown in the accompanying table, unless otherwise noted, are unweighted; that is, the industries included in the groups, and the groups comprising the total of all groups, have not been weighted according to their relative importance in the combined totals.

The anthracite-mining industry, which is confined entirely to the State of Pennsylvania, showed increases from August to September of 15 percent in employment and 18.4 percent in pay rolls. These percentages are based on reports received from 160 mines, which employed in September 79,088 workers whose earnings in 1 week ending nearest the 15 th were $\$ 1,901,846$.

When the identity of any reporting company would be disclosed by the publication of a State total for any industrial group, figures for the group do not appear in the separate industrial-group tabulation, but are included in the State totals for All Groups. Data are not presented for any industrial group when the representation in the State covers less than three establishments.

## COMPARISON OF EMPLOYMENT AND PAY ROLLS IN IDENTICAL ESTABLISHMENTS IN AUGUST AND SEPTEMBER 1934, BY STATES

## Employment and Pay Rolls in September 1934 in Cities of Over 500,000 Population

Fluctuations in employment and pay-roll totals in September 1934 as compared with August 1934 in 13 cities of the United States having a population of 500,000 or over are presented in the following table. These changes are computed from reports received from identical establishments in each of the months considered.

In addition to reports received from establishments in the several industrial groups regularly covered in the survey of the Bureau, excluding building construction, reports have also been secured from other establishments in these cities for inclusion in these totals. Information concerning employment in building construction is not available for all cities at this time and therefore has not been included.

## Employment on Class I Steam Railroads in the United States

Reports of the Interstate Commerce Commission for class I railroads show that the number of employees, exclusive of executives and officials, decreased from 1,020,113 on August 15, 1934, to 1,011,333 (preliminary) on September 15, 1934, or 0.9 percent. Data are not yet available concerning total compensation of employees for September 1934. The latest pay-roll information available shows an increase from $\$ 126,989,749$ in July 1934 to $\$ 128,261,020$ in August 1934, or 1 percent.

The monthly trend of employment from January 1923 to September 1934 on class I railroads-that is, all roads having operating revenues of $\$ 1,000,000$ or over-is shown by index numbers published in the following table. These index numbers, constructed by the Interstate Commerce Commission, are based on the 3 -year average, $1923-25$ as 100 .

## Employment and Pay Rolls in the Federal Service, September 1934

Comparing September with August, there was an increase of 5,000 in the number of employees in the executive departments of the United States Government. Comparing September 1934 with the corresponding month of the previous year, there was an increase of 95,222 employees. Information concerning employment in the executive departments is collected by the Civil Service Commission from the various departments and offices of the United States Government, and figures are tabulated by the Bureau of Labor Statistics. Employment data for the legislative, judicial, and military services are collected and compiled by the Bureau of Labor Statistics of the United States Department of Labor.

Table 1 shows the number of employees in the executive departments of the Government. Data for employees working in the District of Columbia are shown separately. Approximately 13 percent of the employees in the executive departments work in the city of Washington.

${ }^{1}$ Not including field employees of the Post Office Department.
${ }^{2}$ Not including employess transferred within the Government service as such transfers should not be regarded as labor turn-over.
${ }^{3}$ Revised.
There was an increase of 1,492 , or 1.64 percent, in the number of employees of the executive departments working in the District of Columbia, comparing September with August. The number of permanent employees increased 2.6 percent, comparing these 2 months, while the number of temporary employees decreased nearly 7 percent. Comparing September 1934 with the same month of the previous year, there was an increase of over 30 percent in both permanent and temporary employees.

The turn-over rate per 100 Federal employees in the District of Columbia was 3.58. The turn-over rate for permanent employees was 1.25 and for temporary employees 18.09. Comparing September with August there was an increase of 3,508 employees in the executive departments outside the city of Washington. The number of employees outside the city of Washington increased 14.03 percent, comparing September 1934 with September 1933.

Table 2 shows employment in the executive departments of the United States Government by months, January to September 1934, inclusive.

## Employment Created by Public Works Administration Fund, September 1934

During the month ending September 15, 1934, there were 550,000 employees working at the site of Public Works Administration construction projects. This construction is financed wholly or in part from the Public Works Administration fund. These workers were paid nearly $\$ 32,000,000$ for their month's work.

## Employment on Construction Projects, By Type of Project

Table 1 shows, by type of project, employment, pay rolls, and manhours worked during the month of September ${ }^{1} 1934$ on Federal projects financed by the Public Works Administration fund.

TABLE 1.-EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON FEDERAL PROJECTS FINANCED' FROM THE PUBLIC WORKS ADMINISTRATION FUND, DURING SEPTEMBER 1934, BY TYPE OF PROJECT
[Subject to revision]

| Type of project | Number of wage earners | Amount of pay rolls | Number of man-hours worked | A verage earnings per hour | Value of material orders placed |

| Miscellaneous. | 15, 305 | 1,281, 546 | 2, 130, 181 | . 602 | 1, 368, 466 |
| Total. | 390,428 | 21, 920, 315 | 36, 943, 063 | . 593 | 29,509,267 |

${ }^{1}$ Other than those reported by the Bureau of Public Roads.
Federal projects are financed entirely by allotments made by the Public Works Administration to various departments and agencies of the Federal Government. The construction work is done either by commercial firms to whom contracts are awarded by the Federal agencies or by day labor hired directly by such agencies.

There were over 390,000 people working at the site of Federal construction projects. This is a decrease of over 60,000 as compared with the month of August. The decrease was caused mainly by the completion of many public-roads projects. Increases were shown in river, harbor, and flood control, naval vessels, and reclamation projects, comparing these 2 months.

Although employment on road building showed a large decrease, nearly 60 percent of the workers on Federal construction projects were employed on this type of work. More than 54,000 were engaged in river, harbor, and flood-control work and over 31,000 in building construction.

[^9]Employees on Federal construction projects worked nearly 37,000,000 hours and drew $\$ 22,000,000$ for their month's work, an average of over 59 cents per hour.

Hourly earnings ranged from 50 cents for public-road work to 83 cents for naval vessels.

Material orders valued at nearly $\$ 30,000,000$ were placed during the month ending September 15.

Table 2 shows, by type of project, employment, pay rolls, and manhours worked during the month of September on non-Federal construction projects financed from the Public Works Administration fund.

TABLE 2.-EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON NONFEDERAL PROJECTS FINANCED FROM THE PUBLIC WORKS ADMINISTRATION FUND DUR. ING SEPTEMBER 1934, BY TYPE OF PROJECT
[Subject to revision]

| Type of project | Number of wage earners | Amount of pay rolls | Number of man-hours worked | A verage earnings per hour | Value of material orders placed |
| :---: | :---: | :---: | :---: | :---: | :---: |

| Streets and roads | 20, 130 | 1, 074, 553 | 1,672, 656 | . 642 | 1, 686, 143 |
| Water and sewerage. | 32, 046 | 1, 795, 146 | 2, 606, 822 | . 689 | 4,355, 251 |
| Railroad construction | 31,411 | 1,676, 466 | 3, 331, 037 | 503 | 521, 484 |
| Miscellaneous | 952 | 62, 531 | 88, 988 | . 703 | 416, 696 |
| Total | 127, 161 | 7,303, 075 | 10,822, 123 | . 675 | 13, 084, 305 |

Non-Federal projects are financed by allotments made from the Public Works Administration fund to a State or political subdivisions thereof, or in some cases to commercial firms. In the case of allotments to States and their political subdivisions, the Public Works Administration makes a direct grant of not more than 30 percent of the total construction cost. The public agency to which the loan is made finances the other 70 percent. In some cases this 70 percent is obtained as a loan from the Public Works Administration; in other cases, the loan is obtained from outside sources. Where the loan is made by the Public Works Administration it bears interest and must be paid within a given period.

No grants are made to commercial firms. Commercial allotments consist entirely of loans. By far the largest part of the commercial allotments have been made to railroads. Railroad work falls under three headings: First, construction, such as electrification, laying of rails and ties, repairs to buildings, etc.; second, building and repairing of locomotives and passenger and freight cars in railroad shops; third, the building of locomotives and passenger and freight cars in commercial shops.

Data concerning employment created by railroad construction is shown in table 2. Employment in railroad car and locomotive shops
is shown in table 5, page 39. Employment in commercial car and locomotive shops is shown in table 6, page 40.

More than 127,000 workers were engaged at the site of non-Federal construction projects during the month of September. This is an increase of 10,000 as compared with August. These workers were paid over $\$ 7,000,000$ for nearly $11,000,000$ hours of work. They earned an average of 68 cents per hour. Railroad construction showed the lowest average hourly earnings and building construction the highest. Material orders totaled over $\$ 13,000,000$.

## Employment on Construction Projects, by Geographic Divisions

Table 3 shows employment, pay rolls, and man-hours worked during September 1934 on Federal construction projects financed from the Public Works Administration fund, by geographic divisions.

1 Includes $\$ 14,000,357$, estimated value of material orders placed for public-road projects which camot be charged to any specific geographic division.

There were more than 50,000 workers employed in each of the following geographic divisions: East North Central, West North Central, and South Atlantic. Pay rolls in the South Atlantic and Mountain States amounted to more than $\$ 3,000,000$. Workers in all other geographic divisions except New England drew over $\$ 2,000,000$ for their month's work. Average hourly earnings ranged from 46 cents in the East South Central States to more than 75 cents in the Pacific States.

Table 4 shows employment, pay rolls, and man-hours worked during September 1934 on non-Federal projects financed from the Public Works Administration fund, by geographic divisions.

Over 25,000 workers were employed in the South Atlantic States during September, while more than 18,000 were working in the New England, Middle Atlantic, and East North Central States. Pay rolls amounted to over $\$ 1,000,000$ in each of the four geographic divisions enumerated above. Hourly earnings ranged from 56 cents in the West South Central States to more than 80 cents in the East North Central States.

Table 5 shows employment, pay rolls, and man-hours worked in railway car and locomotive shops operated by railroads on work financed from the Public Works Administration fund during September 1934, by geographic divisions.

More than 25 percent of the railroad shop workers engaged on Public Works Administration projects were working in the Middle Atlantic States. Workers in both the Middle Atlantic and East North Central States drew more than $\$ 350,000$ for their month's work. These shop employees worked nearly $2,500,000$ hours during this month, and averaged nearly 64 cents per hour.

The rate ranged from slightly less than 60 cents in the West South Central States to more than 67 cents per hour in the New England States.

Table 6 shows employment, pay rolls, and man-hours worked in commercial car and locomotive shops on contracts financed from the Public Works Administration fund during September 1934, by geographic divisions.

| Total | 461, 120, 773 | 44, 487, 057 |

From the beginning of the Public Works Administration program to August 15, 1934, purchase orders were placed for materials to cost over $\$ 460,000,000$, affecting nearly all branches of industry. The total purchases of steel-works and rolling-mills products, including steel rails, amounted to more than $\$ 85,000,000$; cement, over $\$ 54,000,000$; foundry and machine-shop products, nearly $\$ 51,000,000$; railway cars, nearly $\$ 42,000,000$.

During the month of September orders were placed for materials valued at over $\$ 44,000,000$. It is estimated that the fabrication of the materials for which orders were placed during September will create approximately 105,000 man-months of labor.

Table 8 shows employment, pay rolls, and man-hours worked by employees since the inception of the Public Works Administration program in July 1933 to September 1934.

${ }^{1}$ Revised.
${ }_{3}^{2}$ Includes orders placed for naval vessels prior to October.
${ }^{3}$ Includes orders placed by railroads for new equipment.
The total earnings over the 14 -month period amounted to more than $\$ 260,000,000$. This construction program has provided, at the site of the construction project, nearly $470,000,000$ man-hours of labor. The earnings have averaged nearly 56 cents per hour over the 14month period.

It is estimated that the manufacture of materials for which orders have been placed will create nearly $1,400,000$ man-months of labor. This only accounts for the labor in fabrication of material in the form in which it is to be used. For example, only labor in manufacturing brick is counted, not the labor in taking the clay from the pits or in hauling the clay and other materials used in the brick plant. In fabricating steel rails only the labor in the rolling mill is counted, not labor created in mining and smelting the ore, nor labor in the blast furnaces, the open-hearth furnaces, nor the blooming mills.

## Emergency Work Relief Program

During the week ending September 27 nearly $1,400,000$ people were given employment by the emergency work program of the Federal Relief Administration.

Table 1 shows the number of employees and amounts of pay roll for workers on the emergency work program for weeks ending August 30 and September 27.

Over $\$ 230,000,000$ has been disbursed for pay rolls over the 7 month period.

## Emergency Conservation Work

There were more than 335,000 men in the Civilian Conservation Camps on September 30. Due to the end of an enrollment period, this is a decrease of approximately 50,000 as compared with August.
Table 1 shows employment and pay rolls for Emergency Conservation Work during the months of August and September 1934, by type of work.

TABLE 1.-EMPLOYMENT AND PAY ROLLS IN THE EMERGENCY CONSERVATION WORK, AUGUST AND SEPTEMBER 1934

| Group | Number of employees |  | Amount of pay rolls |  |
| :---: | :---: | :---: | :---: | :---: |

1 Includes carpenters, electricians, and laborers.
${ }^{2} 28,493$ included in the executive service table.
${ }^{2} 28,842$ included in the executive service table.
For the month of September employees engaged in Emergency Conservation Work drew over $\$ 15,000,000$. In addition to their pay, the enrolled personnel receives free board, clothing, and medical attention.

Information concerning employment and pay rolls for Emergency Conservation Work is collected by the Bureau of Labor Statistics from the War Department, Department of Agriculture, Treasury Department, and the Department of the Interior. The pay of the enrolled personnel is figured as follows: 5 percent are paid $\$ 45$ per month; 8 percent, $\$ 36$ per month; and the remaining 87 percent, $\$ 30$ per month.

Table 2 shows employment and pay rolls in the Emergency Conservation Work from the beginning of the program in May 1933 to September 1934, inclusive.

## Employment on State-Road Projects

During the month of September there were over 250,000 employees working on road projects financed by State governments. This is an increase of 17,000 , as compared with the previous month.

Table 1 shows the number of employees engaged in building and maintaining State roads during the months of August and September 1934, by geographic divisions.

TABLE 1.-NUMBER OF EMPLOYEES ENGAGED IN THE CONSTRUCTION AND MAINTENANCE OF STATE ROADS DURING AUGUST AND SEPTEMBER 1934, BY GEOGRAPHIC DIVISION 1

## Employment on Construction Projects Financed by the Reconstruction Finance Corporation, September 1934

For the month ending September 15 more than 17,000 people were employed by contractors working on construction projects financed by loans made by the Self-Liquidating Division of the Reconstruction Finance Corporation.

Table 1 shows employment, pay rolls, and man-hours worked on construction projects financed by the Reconstruction Finance Corporation, by type of project.

Table 1.-EMPIoYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON PROJECTS FINANCED BY THE SELF-LIQUIDATING DIVISION OF THE RECONSTRUCTION FINANCE CORPORATION DURING SEPTEMBER 1934, BY TYPE OF PROJECT
[Subject to revision]

| Type of project | Number of waye earners | Amount of pay roll | Number of man-hours worked | Average earnings per hour | Value of material orders placed |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Railroad construction | 14 | \$1, 155 | 2,504 | \$0.461 | \$4, 189 |
| Building construction. | 2,642 | 247, 209 | 218, 140 | 1. 133 | 189,535 |
| Bridges | 5,111 | 431, 994 | 515, 370 | . 838 | 1,206, 135 |
| Reclamation. | 2,559 | 170, 450 | 369, 591 | . 461 | 110, 603 |
| Water and sewage | 4,908 | 593, 051 | 832, 553 | . 712 | 470,513 |
| Miscellaneous | 1,854 | 204, 759 | 292, 911 | . 699 | 519, 663 |
| Total | 17,088 | 1,648,618 | 2, 231,069 | . 739 | 2,500,638 |

These workers were paid over $\$ 1,600,000$ for their month's work, at the rate of nearly 74 cents per hour. The hourly earnings ranged from 46 cents on reclamation projects to $\$ 1.13$ on building construction.

Table 2 shows employment, pay rolls, and man-hours worked on contracts financed by the Self-Liquidating Division of the Reconstruction Finance Corporation, by geographic divisions.

Table 2.-FMPLOYMENT, PAY ROLLA, AND MAN-HOURS WORKED ON PROJEOTS FINANCED BY TIHE SELF-IAQUMDATING DIVISION OF TIHE RECONSTRUCTION FINANCE CORPORATION DURING SEPTENBEIR 1934, BY GEOGRAPHIC DIVISION
[Subject to revision]

| Geographic division | $\begin{gathered} \text { Number of } \\ \text { wage } \\ \text { earners } \end{gathered}$ | Amount of pay roll | Number of man-hours worked | A verage earnings per hour | Value of material orders placed |
| :---: | :---: | :---: | :---: | :---: | :---: |
| New England | 0 | 0 | 0 | 0 | 0 |
| Middie Atlantic | 4, 084 | \$410,025 | 411, 304 | \$0.997 | \$883, 631 |
| East North Central | 250 | 31, 409 | 29,879 | 1. 051 | 46, 009 |
| West North Central | 0 | 17 | 0 | 0 | - 0 |
| South Alantic. | 505 | 17,961 | 41,956 | . 428 | 10,956 |
| East South Central | 104 | 5,609 | 18,996 | . 295 | 7,534 |
| West South Central | 967 | 77, 312 | 101,567 | . 761 | 34, 415 |
| Mountain | 2,611 | 173, 677 | 372, 896 | . 466 | 117,636 |
| Pacific | 8,517 | 932,625 | 1, 254, 471 | . 743 | 1,400, 457 |
| Total. | 17,088 | 1,648, 618 | 2,231,069 | . 739 | 2,500,638 |

Nearly 50 percent of these workers were employed in the three Pacific States. Over 4,000 were employed in the Middle Atlantic States. Hourly carnings were less than 30 cents in the East South Central States and over $\$ 1.05$ in the East North Central States.

Table 3 shows data concerning employment, pay rolls, and manhours worked during the months, April to September inclusive, on construction projects financed by the Reconstruction Finance Corporation.

## Employment on Construction Projects Financed from Regular Governmental Appropriations

Beainning with July the Bureau of Labor Statistics began collecting data concerning employment, pay rolls, and man-hours of work on all construction projects financed by appropriations made by the Congress direct to the various Federal departments and units.

In accordance with the request of the Secretary of Labor, the director of procurement has caused the following paragraph to be inserted in all Government contracts:

The contractor will report monthly, and will cause all subcontractors to report in like manner, within 5 days after the close of each calendar month, on forms
to be furnished by the Department of Labor, the number of persons on the respective pay rolls, the aggregate amount of such pay rolls, the man-hours worked, and the total expenditures for materials. He shall furnish to the Department of Labor the names and addresses of all subcontractors on the work at the earliest date practicable, provided that the foregoing shall be applicable only to work at the site of the construction project.

Whenever a contract is awarded by a Government department, the Bureau is immediately notified of the name and address of the contractor. Forms are then mailed to the contractor, who mails his report to the Bureau showing the number of men on the pay rolls, amount of pay rolls, number of man-hours worked, and the value of material orders placed.

The following tables show data concerning such work on construction projects on which work has started since July 1. The Bureau has no data for projects that were under way previous to July 1, 1934.

Table 1 shows employment, pay rolls, and man-hours worked on projects on which work started subsequent to July 1, financed from direct appropriations to the various Government agencies.

TAble 1.-EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON PROJECTS ON WHICH WORK STARTED SINCE JULY 1 FINANCED FROM REGULAR GOVERNMENTAL APPROPRIATIONS FOR SEPTEMBER 1934, BY TYPES OF PROJECTS
[Subject to revision]

There were nearly 10,000 workers on this new construction work during the month ending September 15, and these men drew nearly $\$ 500,000$ for their month's pay. The average hourly earnings amounted to 64 cents, and the earnings ranged from 56 cents per hour for public roads to 96 cents per hour for naval vessels.

Table 2 shows for the month of September employment, pay rolls, and man-hours worked on construction projects started since July 1 which are financed from regular governmental appropriations, by geographic divisions.

TABIE 2.--EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON PROJECTS ON WHICH WORK STARTED SINCE JULY 1 FINANCED FROM REGULAR GOVERN. MENTAL APPROPRIATIONS FOR SEPTEMBER 1934, BY GEOGRAPHIC DIVISIONS
[Subject to revision]

${ }^{1}$ Includes $\$ 183,565$ estimated value orders placed for public-road projects which cannot be charged to any specific.geographic division.

More than 2,300 men were employed in the East North Central States and over 1,600 in the South Atlantic States. Workers in the East South Central States earned an average of 49 cents per hour. In the East North Central States the workers earned an average of over 74 cents per hour.

Table 3 shows for the months of August and September employment, pay rolls, and man-hours worked on construction projects starting since July 1 which are financed from regular governmental appropriations.

TABLE 3.-EMPLOYMENT, PAY ROLLS, AND MAN-HOURS WORKED ON PROJECTS ON WHICH WORK STARTED SINCE JULY 1, FINANCED FROM REGULAR GOVERNMENTAL APPROPRIATIONS FOR AUGUST'AND SEPTEMBER 1934

Wage-Rate Changes in American Industries
Manufacturing Industries
The following table presents information concerning wage-rate adjustments occurring between August 15 and September 15, 1934, as shown by reports received from 24,206 manufacturing establishments employing 3,439,808 workers in September.

One hundred and thirty-two establishments in 44 industries reported wage-rate increases averaging 6.9 percent and affecting 12,555 employees. One establishment each in four industries reported decreases which averaged 9.1 percent and affected 553 workers.

The outstanding wage-rate adjustment was an average increase of 5 percent received by 3,920 wage earners in 5 petroleum refineries.

Fifteen establishments in the newspaper and periodical industry gave an average increase of 9.2 percent to 1,014 workers. Two establishments in the machine-tool industry reported an average increase of 7 percent to 952 wage earners. An average increase of 9.4 percent was given to 924 workers in 9 bakeries, and one of 7 percent affecting 922 employees was reported by 6 establishments in the electricalmachinery industry. The increases in each of the remaining industries affected 483 employees or less.

## Nonmanufacturing Industries

Data concerning wage-rate changes occurring between August 15 and September 15, 1934, reported by cooperating establishments in 17 nonmanufacturing industries are presented in table 2.

Increases averaging 6.8 percent and affecting 2,494 employees were reported by 43 establishments in the electric light and power and manufactured gas industry, and 15 establishments in the electric-railroad and motor-bus operation and maintenance industry showed an average increase of 4.8 percent, which affected 2,013 employees. One thousand one hundred and fifty-four workers in 5 metalliferous mines received an average increase of 10.5 percent and 669 workers in 48 wholesale-trade establishments received one of 10.5 percent. The wage-rate increases in the remaining industries affected 151 workers or less, while the decreases reported affected a total of 337 workers in 5 industries.
