## DEPARTIENT OF LABOR

OFFICE OF THE SECRETARY
Total civil nonagricultural employment increased by 327,000 frommid-April to mid-llay, Secretary of Labor Frances Perkins reported today (Tuesday). WThe May total was 41,201,000, a new all-time high", she said. "It exceeded the previous peak (41,073,000 in December 1941) by 128,000 and the level of May 1941 by 2,299,000.
"A substantial portion of the increase from April to May was in manufacturing industries where a contraseasonal gain of 76,000 workers reflected continued expansion in the war production industries. Contract construction showed a grin of 92,000, the May level exceeding all previous months since the fall of 1929. Increased employment on government projects accounted for this substantial gain; private construction showed a snall decrease over the month interval, Federal, Stite and local goverment employment increased by 86,000 and thore wore incroases of 40,000 in the transportation and public utilities group, and 38,000 in the group of finance, service, and miscellaneous industries. Enployment in the group of mining industries showed a small goin, while wholesale and retail trade estabIishments combined reported a slight loss. Governnent restricitons affecting the sale of such itens as automobiles, tires, electrical appliances, gasoline, lumber and plumbing and heating equipnent accounted for the dectease in various lines of trade.
"The Principal factor in the expansion of nearly 2,300,000 in nonagricultural
employnent over the year intervel was the increase of $1,135,000$ in menufacturing
industries. Federal, State and local government services, contract construction,
and transportation and public utilities also showed largo gains, wile a smaller
increase was reported in the fincnce, service and riscellanoous group. In the
remaining two major groups, trad and minng, there wore doclines of 80,000 and
7,000 respectively. A number of lines of both wholosele and retail tride have
been seriously affected by the war progran, particularly automotive, while the
sharp curtailment in oil well drilling eccounts prinarily for the decrease in the
mining group over the ycar intorvcl.
"The rise of 0.7 percent in fectory omployment between fpril and Fiey was in
contrast to a seasonally expector doclino of 0.5 percent, while the corrosponding
increase in weekly pay rolls (3.2 percert or $41,300,000$ ) compared with a typicel
rise of only 0.2 percent or about $\$ 700,000$ for this time of year. Tho durable
goods group of manuracturing industries, in which war production is chiefly con-
centrated, reportod en employment incrense of 1.7 percent (102,100) while the
nondurable goods group showed a decrease of 0.6 percent ( 27,300 ).
"Shortages of materials and lay-offs in plants converting their focilities to war production continued to cause employment reductions in man duroble and nondurable industries. Ainong then were cast-iron pipe, cutlery, herdware, plumbers' supplies, wirework, steam and hot-weter heating apparctus and steam fittings, tin cans and other tinwear, radios, typerriters, jewelry, lighting equipnent, carpets and rugs and rubber goods. Gains in industries geared to the war effort, however, more than offset these declines. For the first time since last November automobile plonts reported an employnent increase ( 5.6 percent or 18,900 workers) indicating a setpping-up of war production in converted plonts. Other strategic war industries continued to show sharp employment gains, notably shipbuilding, aircraft, engines, mechine tools, machine-tool accessories, electrical machinery, foundries and machine shops, anmunition, and firearms.

- 2 -
"Anong the nondurable-goods industries, seasonal increases were shown by woolen and worsted goods mills, bakeries, meat packing plants, and plants manu= facturing beverages, butter, ice crean, and bect sugar. The canning and preserve ing industry showed a contraseasonal gein of 2.1 percent. Scasonol declines were reported by establishments manufacturing fertilizers; cottonseed - oil, cake, and neal; confectionery; and millinery.
"The May indexes of factory employment (137.0) and pay rolls (192.6), based on 1923-25 as 100, were at the highest levels on record, the goins since llay of last yeer being 9.7 and 33.7 percent, respectively. The pay-roll increase in 1011 manufacturing over the year was nearly four times as large as the employment expansion due largely to increased working hours, overtine preniums, and wage-rate increases.

WWagerate increases averaging 7.9 percent and offecting 207,000 factory wage earners were reported by 691 plants out of a reporting sample of approxinetely 30,000 plants with about $6,000,000$ workers. The largest number of workers affected were in the cotton goods, men's clothing, machine tools, aircraft, boot and shoe, and paper and pulp industries. Scattered wage-rate increases were reported among the nonmanufacturing industries surveyed, the public utilities group reporting the largest numbers of workers affected.
"Employment in anthracite mining showed a contraseasonal increase of 1.0 percent from April to May, while bituminous coal mines reported a less-than-seasonal decline of 0.3 percent. These changes were coupled with pay-roll increases of 14.5 and 3.4 percent respectively, reflecting increased production. Quarries and nonmetallic mines expanded their forces by 2.8 percent, about half the average May increase of the preceding 13 years. While the small employment increase of 0.1 percent in metal mines raised the index to 82.0 percent of the 1929 average, the highest May level since 1930, crude petroleum producing firms reported 0.4 percent fewer production employees than in the preceding month.
"The continuing demand for public transportation facilities was reflected by the increase of 1.6 percent in the number of workers employed by street railvays and busses, this being the fourth consecutive monthly gain, and with but one exception the largest percentage increase in any month during the last 14 years. Electric light and power companies reported a contraseasonal employment drop of 1.0 percent while telephone and telegraph offices increased their forces slightly. Anong the service industries, increases of a seasonal character were shown by laundries ( 3.2 percent), dyeing and cleaning establishments ( 5.4 percent), hotels ( 0.4 percent). Brokerage and insurance firms reported decreases of 3.9 and 0.8 percent respectively.
"The drop of 1.7 percent in wholesale trade employment was greater than usual for May due lavgely to contraseasonal decreases in many lines as war conditions and resulting government restrictions affected the sale of such itens as automobiles, tires, petroleum and gasoline, electrical appliances, radios, plumbing and heating equipinent, furniture and house furnishings, and paper products. These factors also affected similar lines of retail trade. Employment in retail food, general merchandise, and fuel and ice establishnents, however, increased over the month interval and the net change for retail trade as a whole was a decrease of only 0.1 percent.

Nonagricultural employment showed increases over the month in all but 4 states, Vermont, Arkansas, Florida, and South Dakota showing slight decreases. Sizable gains were shown over the year in all but 2 States (Michigan and Delaware). The
largest percentage increases occurred in Oregon, Arkansas, District of Columbia, Alabana, Washington, and Utah.
"All Federally-financed construction required $1,56 /, 000$ vorkers during the month ending May 15 , constituting an increase over April of 193,000 or 14 percent. Pay rolls, amounting to $\$ 281,549,000$, increased 18 percent. Construction vorkers hired directly by the Federal Governnent numbered 239,000 or 15 percent of the total.
"War construction, not including housing, enployed 196,000 additional workers during May, reaching a total of $1,418,000$ persons and constituting 91 percent of the total number employed on Federally-financed construction. Expansion during May was concentrated mainly on the construction of ships, nonresidential buildings, and streets and roads.
"Employment on public housing projects showed a decline during the month onding May 15 of 8,900 and over the past year of 66,300 .
"Erployment in the Federal executive service increased 78,700 persons during May: 7,400, inside the District of Colunbia and 71,300 outside. Over the past year eriployment inside the District has increased. 45 percent and outside the District 62 percent. During liay total employment in the Federal executive service was 2,091,000 and pay rolls were $331,645,000$.
"Contraction of the work-relief programs continued during Ray. WPA persomel was cut 80,700 ( 9 percent), personnel on the NYA student work program was cut 21,400 and on the out-of-school work progran 24,000 (10 percent for the 2 prograns). The 12,300 personnel decline for the CCC was distributed anong the various groups as follows: enrollees, 11,400 ; nurses, 13 ; educational advisors, 81 ; and supervisory and technical, 834. All work-relief prograns have dropped a total of 1,356,000 names from the rolls in the past year."

The estimates of "Total civil nonagricultural emploment", given on the first line of the above table, represent the total number of persons engaged in geinful work in the united states in nonagricultural industries, excluaing military and naval personnel, persons employed on W. P. A. or N. Y. A. projects, and enrollees in C. C. C. camps. The series described as "Employees jn nonagricultural establishments" excludes also proprietors end firm members, self-employed persons, casuel workers and persons in domestic service. The estimates for "Emoloyees in ronagricultural ectabiishments" are shown esparately for esch of seven mejor industry groups. Data for the manufacturing and trads groups heve been revised to include adjustments to preliminary 1939 Census data.

The figures represent the rumber of persons worising at any time during the week ending nearest the middle of each month. The totals for the united atates have been adjusted to conform to the figures shown by the 1930 Census of Occupations or the number of nonagricultural "goinful workers" less the number shown to have besa wemployed for one week or more at the time of the cencus. Separate sotimates for "Employees in nonegriculturcl establishments" sre shown in the following table for each of the 48 States and the District of Columbie for dipri? and May, 1942 and May 1941. Tables showing the estimes for each State from July 1977 to dete are available on request. because the otate figures do rot include employees on
merchant vessels, and beceuse of certain adjustments in the United States estimates which have not been made on a stete besis, the total of the State estimates will not agree exactly with the figures for the United States as a whole.

These estinates are besed in ierge part on industrisil censuses and on regular reports of employers to the United States Bureau of Labor itatistics and to other Government agencies, such as the Intarstate Comerce Commission. Data derived fron employers" quarterly reports in connection with "old age and survivors' insurance," and employers' monthly reports in connection with unemployment compensation have been used extensively as a check on estimates gerived from other sources. and in some industries they have provided the rost reliable information available.

Indexes of employment and pay rolls for all manufacturing industries combined, Class I steam railroads, and for those nommafacturing industries for which information is available, are shown below for May 1942, with percentage changes from April 1942 and May 1941. The 3-year average 1923-25 is used as a base in computing the indexes for the mamfacturing industries and the 5 -year average $1935-39$ as a base for Class I steam railronds. For the other nonmanfacturing industries information for years prior to 1929 is not available from the Burean's records, and the 12 -month average for 1929 is used as a base in computing the index numbers. These indexes are not adjusted for seasonal variation.

The data for manufacturing, mining, building construction, laundries, and dyeing and clcaning cover wage earners only; those for railronds cover all employees while the date for watcr transportation cover employees on vessels of 1,000 gross tons or over in deep-sea trades only. The data for other industries excludo proprietors and firm members, corporation officers, executives, and others whose work is minly supervisory.

Index Numbers of Employment apri Pay Rolis of Wage Earners in MANUFACTURING INDUSTRTE: Adjusted to 1937 Census of Manufactures, Except as Indicated in Notes 2 and 4
( 3 -Year Average $1923-25=100.0$ )
