U. S. Department of Labor Bureau of Labor Statistics

Total employment in nonagricultural establishments increased by 423,000 between mid-November and mid-December, Secretary of Labor Frances Perkins reported today. "The number at work in December was 38,956,000, a new all-time peak," she said. "It exceeded the December 1941 figure by 2,868,000.

"The outstanding gains over the month among the industry divisions were a seasonal increase of 341,000 in trade employment (due primarily to the hiring of additional personnel to handle the pre-Christmas buying) and a gain of 235,000 in manufacturing employment (chiefly in war plants). Contract and Federal force account construction showed a decline of about 9 percent or 170,000 workers.

"Over the year interval, the outstanding gains were in manufacturing (2,103,000) and Federal, State, and local government (1,200,000). The gain in the latter division was due primarily to expansion in the War and Navy departments. The chief declines over the year were in trade (399,000) and contract and Federal force account construction (154,000).

"War industries continued to report increases in wage-earner employment and pay rolls in the effort to maintain an increasing flow of war goods, among them being such durable goods industries as aircraft, shipbuilding, automobiles (now engaged almost entirely on war work), electrical equipment, machine-shop products, and onginos.

"Among nondurable goods industries showing substantial employment gains over the month interval - due partly to war demands and partly to seasonal influences - were slaughtering and meat packing, ammunition, fireworks, cotton goods, tires and tubes, chemicals, paper boxes, men's clothing, and fertilizers.

"Employment decreases, largely seasonal, were noted in canning (24,600); beet sugar (4,700), brick, tile and terra cotta (1,300); cottonseed-oil, cake and meal (1,300), and butter (1,100). Sawmills and logging camps reported an employment decline of 6,200 wage earners due partly to seasonal factors and partly to the difficulty of replacing men who had been called into the service or had left for other jobs.

"The durable-goods group, as a whole, in which most of the war industries are concentrated, showed employment gains over the month and year intervals of 2.4 percent and 25.5 percent, respectively, in contrast to increases of only 0.4 percent and 3.4 percent respectively for the nondurable goods industries which produce chiefly for civilian consumption.

"The corresponding gains in weekly pay rolls were 3.0 percent and 60.0 percent, respectively, for durable goods and 3.3 and 24.1 percent, respectively, for non-durable goods. For all manufacturing industries combined the number of wage earners had expanded by 1.5 percent between mid-November and mid-December and by 15.0 percent between December 1941 and December 1942, while pay rolls had increased by 3.1 and 46.0 percent, respectively.

"The aggregate figures from which the above percentages are derived are given in the following table:

| | : 7 | Wage Earne | r | : W | age Earner | • |
|-----------------------------|-----------|------------|-----------|------------|------------|-----------|
| | : | Employment | | : Week | ly Pay Rol | .1 |

| Durable | | | | | | |

"In anthracite and bituminous-coal mining employment declined slightly between mid-November and mid-December (1.0 and 0.8 percent, respectively) and quite sharply between December 1941 and December 1942 (6.9 and 7.2 percent), reflecting the difficulty of replacing miners who have been called into the service or who have moved to other jobs. Anthracite pay rolls, however, showed a gain of nearly 40 percent and bituminous-coal mining 8 percent over the year interval, due primarily to increased working hours.

"Metal mining employment as a whole showed little change over the month interval because of offsetting influences in the various branches of the industry. For example gold and silver mines reduced their forces by 10.1 percent due to the Government closure order, while copper, lead, and zinc mines added nearly 2 percent to the number on their pay rolls.

"Employment declines over the month were reported in all but 2 of the public utility and service industries. These declines were loss than 1 percent for all of these industries except dyeing and cleaning (3.6 percent) and electric light and power (1.1 percent). The latter industry has been showing employment reductions each month since August 1941. Brokerage firms reported an employment gain of 1.0 percent over the month, but a comparison over the year interval showed a decline of 23.0 percent. Street railway and bus companies continued to take on more workers (2.2 percent) to meet increased demands for local transportation due in part to more general gas rationing and to restrictions on pleasure driving. The gain over the year interval of 27.8 percent in pay rolls in this industry reflected corresponding gains of 9.5 percent in employment, 6.0 percent in average weekly hours (the average number of hours worked in December 1942 was nearly 50), and 10 percent in average hourly earnings.

"Retail trade establishments took on 9.7 percent more employees to handle the large crowds of Christmas shoppers. Despite government restrictions on the manufacture and sale of certain items, the net omployment decline in retail trade since Docember 1941 was only 6.0 percent. Declines over the year interval of 39 percent in automotive establishments, 26 percent in stores selling furniture and house furnishings, and 17 percent in establishments selling lumber and building materials have been partially offset by a 3 percent increase in the large group of stores selling general merchandise. The latter group, including variety, general merchandise, and department stores as well as mail-order houses, reported an employment increase of 26.3 percent over the month. The apparel group reported an employment increase over the month of 10.5 percent, the furniture and house furnishings group a gain of 2.9 percent, and the automotive group an increase of 1.8 percent. The gain in the last-named group was due in part, no doubt, to the sale by many stores of such nonautomotive items as toys and work clothing. The lumber group reported 1.9 percent fewer employees.

"Wholesale trade employment showed virtually no change over the month (-0.2 percent), all of the major groups having reported employment reductions except the automotive group (+1.6 percent) and the machinery, equipment and supplies group (+1.2 percent). Over the year interval declines were quite large for all of the major wholesale groups, the largest being in the automotive group (18.6 percent) and the dry goods and apparel group (10.4 percent) and the smallest in machinery, equipment and supplies (2.2 percent). Wholesale trade as a whole reported an employment decline of 7.6 percent over the year interval.

"The decline during December of 24,200 workers on construction projects financed by the Federal Government was partially due to the completion of several airport and nonresidential building projects, and partially to seasonal declines on road and reclamation projects. Gains reported during the month on ship construction and air corps station construction projects were not great enough to completely offset these declines.

"During the past year of war, employment on construction and shipbuilding projects increased 1,056,000. From the level of 1,068,000 in December 1941, employment rose rapidly during the spring and summer of 1942 until in August a peak of 2,229,000 workers was reached. From that point employment tapered off only gradually to a level of 2,124,000 in December. Most of the declines were due to the completion of projects rather than to seasonal influences. War project employment constituted 89 percent of the total in December 1941 and 96 percent in December 1942.

"Civilian employment in the executive branch of the Federal Government aggregated 2,948,000 in December. This represented an addition since November of 120,000 workers of whom approximately 60,000 were in the War and Navy Departments and other war agencies, and 60,000 were temporarily employed by the Post Office Department to handle the heavy holiday mails. Employment in nonwar agencies other than the Fost Office Department remained approximately at the November 1942 level. Federal employment inside the District of Columbia turned down for the first time in 3 years. This was the result of decentralization of certain war and nonwar offices during the month.

"Over the past year Federal executive-service employment showed an increase of 1,239,000 which was distributed as follows: War Department 846,000, Navy Department 261,000, emergency war agencies (exclusive of Federal Security Agency employees who were transferred to the War Manpower Commission in December 1942) 110,000, and other agencies 22,000.

"Reductions in December 1942 in personnel of the NYA, WPA, and CCC programs were 7,300, 26,100, and 700, respectively, leaving aggregate personnel on the NYA of 158,000 and on the other two programs of 338,000. A year ago workers on the NYA program totalled 623,000 and on the work-relief programs 1,206,000."

Other war agencies include OEM, OPA, Office of Censorship, Board of Economic Warfare, Office of Strategic Services, War Manpower Commission, Maritime Commission, National Advisory Committee for Aeronautics, and the Panama Canal.

REVISED ESTIMATES OF EMPLOYMENT IN NONAGRICULTURAL ESTABLISHMENTS BY INDUSTRY DIVISIONS (In Thousands)

^{1/} Estimates exclude proprietors of unincorporated businesses, self-employed persons, domestics employed in private homes, public emergency employees (WPA, NYA, and CCC), and personnel in the armed forces.

The above estimates of employees in nonagricultural establishments are a continuation of the adjusted series presented in the August 31, 1942 mimeographed press release. The figures represent the number of persons working at any time during the pay period ending nearest the 15th of each month. The estimates exclude proprietors of unincorporated businesses, self-employed persons, unpaid family workers, domestics employed in private homes, public emergency employees (WPA, CCC, and NYA), as well as personnel in the armed forces.

As in previous series, current monthly estimates are made chiefly on the basis of month-to-month changes in employment reported to the Bureau of Labor Statistics by a large number of cooperating employers in many diversified industries. The levels in many industries have been adjusted on the basis of data made available by the Bureau of Employment Security of the Social Security Board covering employment figures reported under the State Unemployment Compensation programs. Since most of the State laws exclude small firms from coverage, estimates for such exclusions were made on the basis of special State tabulations prepared by the Bureau of Old-age and Survivors Insurance, whose program covers all employers regardless of size of firm. Estimates in other industries were made on the basis of data reported to other government agencies such as the Interstate Commerce Commission, Civil Service Commission, and the Bureau of the Census.

Revised monthly estimates of employees in nonagricultural establishments from January 1939 to June 1942 for 5 of the 7 major industry divisions are available on request. Revised estimates for the trade and service industry divisions for this period and revised estimates for all industry divisions from 1929 to 1939 are contemplated and will be released at a later date.

Revised monthly estimates of total employees in nonagricultural establishments and wage and salaried employees in manufacturing industries, by State, from January 1939 to June 1942 are also available on request. Separate estimates for each of the 48 States and the District of Columbia for November and December 1942 and December 1941 are shown in the following table. Because the State figures do not include employees on merchant vessels, and because of certain adjustments in the United States estimates which have not been made on a State basis, the total of the State estimates will not agree exactly with the figures for the United States as a whole.

1/ Estimates for the Major Industry Groups (titles of which are capitalized) have been adjusted to levels indicated by data for 1940 and 1941 made available by the Bureau of Employment Security, Federal Security Agency; estimates for individual industries have been adjusted to levels indicated by the 1939 Census of Manufactures, and are comparable to industry definitions of the Standard Industrial Classification.

Information concerning the following War Industries is not published but may be obtained by authorized agencies upon request: Aircraft engines; Aircraft & parts, excluding engines;

Alloying; Aluminum manufactures; Ammunition; Cars, electric- and steam-railroad; Communication equipment; Electrical equipment; Radios and phonographs; Engines and turbines; Explosives and safety fuses; Fire.extinguishers; Firearms; Fireworks; Locomotives; Machine tool accessories; Machine tools; Optical instruments and ophthalmic goods; Professional and scientific instruments and fire control equipment; and Shipbuilding.

2/ These index numbers are computed from aggregates of at least 3 significant figures and are based upon the average for the year 1939 as 100.0. They should not be compared with indexes published in releases dated earlier than December 1, 1942. Comparable indexes for the major industry groups from January 1939 are available in mimeographed form upon request. Indexes for the individual industries will be presented also in mimeographed form in the immediate future.

3/ The Navember 1941 figures published in the mimeographed release dated January 1, 1943 should have been as follows: Wage earners 164.2 and weekly wages 228.0.

4/ The following pairs of industries were carried as single industries in the mimeographed reports for August 1942 and prior months: "blast furnaces, steel works and rolling mills" and "steel castings" as "blast furnaces, steel works and rolling mills"; "agricultural machinery" and "tractors" as "agricultural implements (including tractors)"; "nonalcoholic beverages" and "malt liquors" as "beverages"; and "cigarettes" and "cigars" as "cigars and cigarettes".

^{1/} Preliminary.

^{2/} Data for December 1942 include 353,810 force-account employees also included under construction projects. Supervisory and technical employees of the NYA, WPA and CCC programs are included under executive service and also under the respective programs.

^{2/} Employment data are for the last pay period of the month; pay roll data for the complete monthly period.

^{4/} Beginning with July 1942, NYA projects are no longer considered as work-relief projects but are primarily training programs for war work.

Training program was called out-of-school work program prior to July 1942. Value of maintenance is included in the pay roll data for December 1941 but excluded from those for November and December 1942.

^{5/} Pay roll data represent disbursements made during the calendar month, employment data represent the weekly average.

^{6/} Breakdown not available.

^{7/} Employment represents for enrolled personnel an average of counts taken at ten-day intervals, and for other groups, the number employed on the last day of the month. Pay roll data are for the calendar month.
