# EMPLOYMENT and Payrolls 

Monthly Statistical Report

## FEBRUARY 1954

UNITED STATES DEPARTMENT OF LABOR
James P. Mitchell, Secretary

BUREAU OF LABOR STATISTICS
Ewan Clague Commissioner

# Publications on Employment Developments 

# Available from <br> the Bureau of Labor Statistics 

The Bureau of Labor Statistics program in the measurement and analysis of employment trends includes (1) the preparation of current monthly statistics on employment, labor turnover, and hours and earnings in major industries, States and areas; (2) the interpretation of these employment trends; (3) the analysis of long-term trends in employment in major occupations and industries; and (4) the preparation of estimates of manpower requirements for the defense mobilization program and estimates of prospective labor supply. Employment statistics are prepared in cooperation with State agencies.

Listed below and continued on the (inside) back cover are the major reports available to the public. Distribution is free unless otherwise noted. Requests for these publications specifying exact titles, should be addressed to the Bureau of Labor Statistics, U. S. Department of Labor, Washington 25, D. C.

EMPLOYMENT AND PAYROLLS-Employment figures presented for approximately 200 individual industries, for 48 States and the District of Columbia and for selected areas, in varying industry detail. Report also contains analysis of latest monthly employment $t r e n d s$ and current and anticipated developments in selected industries. Turnover data on hiring, quits, layoffs, and discharges shown for 125 manufacturing and selected nonmanufacturing industries on a national basis only. Separate press releases on employment and labor turnover giving analysis of current trends in broad industry groups based on preliminary data are available earlier. All reports are published monthly. Separate data for manufacturing industries showing turnover rates for men and women and employment of women are available quarterly.

HOURS AND EARNINGS-Average weekly earnings, average weekly hours, and average hourly earnings for approximately 300 industries, and for $S t a t e s$ and selected areas. Press release, giving analysis of current trends in broad industry groups based on preliminary data, available approximately 2 weeks earlier. Both reports published monthly.

These publications prepared by DIVISION OF MANPOWER AND EMPLOYMENT STATISTICS

Seymour L. Wol fbein, Chief

Released February 25, 1954

Chicago metropolitan area series

Beginning with this issue, table A-9 contains employment data by industry division for the Chicago metropolitan area. Historical data are available from January 1952.

Turnover rates of men and women.....

The quarterly table showing labor turnover rates of men and women in selected manufacturing groups is presented on page 36.

## Employment Trends

JANUARY DROP IN NONFARM JOBS WAS MAINLY SEASONAL

The number of workers on nonfarm payrolls declined by 2 million between December 1953 and January 1954, mainly because of seasonal factors. Retail stores and Federal post offices laid off temporary Christmas season employees. Construction employment declined as cold weather slowed down outdoor activity. In manufacturing, however, the over-the-month drop was appreciably larger than usual as the downtrend in factory employment continued into the new year.

The nonfarm employment total of 47.7 million in January was the largest ever reported for the month, except in 1953. It was smaller than a year earlier because of recent rem ductions in the manufacturing work force. Nonmanufacturing employment this January was actually higher than the previous record for the season reached a year earlier.

The number of employees in manufacturing industries dropped by 380,000 between mid-December and mid-January. Manufacturing activity usually slackens at this time of year, reflecting midwinter curtailment of lumbering and food processing, post-Christmas cutbacks in consumergoods industries, and other seasonal factors. The decline this year was larger than usual and, in fact, was the sharpest reduction for the season
since January 1949. The latest developments marked the contimuation of the dountrend in factory employment first evident in mid-1953.

Over the month, all manufactur ing industry groups registered an employment decline, except fabricated metal products, where a small increase reflected the end of a work stoppage. Seasonal factors accounted for reductions in lumber, food, and miscellaneous manufacturing-which includes toys and jewelry. However, there were declines in primary metals, machinery, leather, transportation equipment, and ordnance which were not attributable to seasonal influm ences. In textiles and apparel, where reductions are customary at this time of year, the January 1954 decreases were larger than usual.

At 16.1 million, the number of workers on manufacturing payrolis in January 1954 was three-quarters of a million less than a year earlier. However, the total was the highest for the month in any postwar year except 1953. Three industry groupsprimary metals, machinery, and tex-tiles-accounted for nearly half of the total decline in manufacturing employment between January 1953 and January 1954.

At the turn of the year, seasonal changes dominated employment developments in nonmanufacturing industries. However, the decline in manufacturing activity was reflected
in a more-than-usual decrease in transportation employment.

Employment in wholesale and retail trade was reduced by 900,000 over the month, to 10.4 million. At this level, trade employment was 140,000 above the previous all-time peak ror the month reached in January 1953.

Government employment declined by almost 300,000 between December and January, primarily because of the layoff of temporary postal workers who had been added in the previous month. Federal employment remained below year-ago levels, but continued expansion of State and local government brought the number of government emplojees to a total slightly higher this January than a year earlier.

Midwinter slowing down in construction activity was reflected in a 270,000 decrease in contract construction employment between December and January. At $21 / 4$ million in January, the number of workers on contractors' payrolls was very close to the 1952 all-time peak for the month.

DOWNTREND IN FACTORY WORKWEEK CONTINUED

The workweek of factory production workers dropped four-fifths of an hour between mid-December and mid-January, to 39.4 hours. Hours usually decline in January, but this decrease was the largest in recent years. The workweek has tended to drop, apart from seasonal factors, for a number of months as overtime has become less prevalent. As a result, the workweek in January 1954 was 1.6 hours below the post-World War II peak for the month reached a year earlier.

Over the month, all but 4 of the 21 industry groups reported declines in factory hours. However, these rem ductions were noticeably greater than usual only in fabricated metals, instruments, machinery, textiles, apparel, and miscellaneous manufacturing

Factory workers' average gross hourly earnings, including overtime and other premium pay, were at an alltime high of $\$ 1.80$ in January 1954. Over the year, hourly pay was up by 6 cents, principally reflecting widespread advances in wage rates. The largest gains in gross hourly earnings were reported in transportation equipment, food, tobacco, chemicals, printing, and stone, clay and glass.

Weekly pay of factory workers averaged $\$ 70.92$ this January, $\$ 1.04$ less than in December and 42 cents below the figare for January 1953. The reduction in weekly earnings over the year reflected the decrease in hours of work, which more than offset the influence of higher wage rates. However, average weekly earnings in January 1954 were at record levels for the month in the ordnance, transportation equipment, food, tobacco, paper, printing, chemicals, petroleum products, and stone, clay and glass industry groups.

## IN DECEMBER, FACTORIES REPORTED HIGHER LAYOFFS

Labor turnover reports from manufacturing plants showed an increase in layoffs and a decrease in hiring in December. These developments reflected the continuation of the downtrend in factory employment that began in midyear.

The rate at which factory workers were laid off rose from 23 per 1,000 employees in November to 29 in December. In the latter months of

1953, layoff rates were appreciably higher than was typical for the season in most recent years. In December, the rate was about twice the post-Horld War II average for the month.

Between November and December most manufacturing industry groups showed an increase in layoff rates. In ordnance, fabricated metals, textiles, rubber, instruments, stone, clay and glass, and miscellaneous manufacturing, the rise was greater than usually reported at this time of year. There were declines, however, in some of the groups where layoffs had been relatively high in preceding months. These included furniture, chemicals, and paper.

The hiring rate in the Nation's factories declined from 27 per 1,000 employees in November to 19 in December. All industry groups except rubber showed reduced hiring rates. Hiring usually drops at the year-end because of seasonal factors. However, the one-third reduction between November and December this year was sharper than usual and it followed a downtrend in hiring that has persisted since the late summer of 1953. As a result, the December rate was down to half the postwar average for the month.

The rate at which factory workers quit their jobs dropped between November and December, from 15 to 11 per 1,000 employees. A downtrend in quit rates has accompanied the recent falling off in manufacturing employment, reflecting a decline in alternate job opportunities. The December 1953
quit rate was the lowest for the month since 1949.

## EMPLOXMENT TRENDS VARTED

AMONG STATES
Differences in the industrial composition of the various regions of the United States, as well as differential trends within industries, are reflected in interstate variations in employment trends. These geographic differences have been quite marked in recent years as a variety of special factors associated with the Korean emergency and related economic developments were superimposed on the long-term locational trends of American industry.

The contraction of factory employment over the past year also has been unequaliy distributed among the various States, as shown in the chart preceding page 1 of this issue. In a number of States, there was little net change in factory employment over the past year and in some, increases actually occurred. Except for California, Connecticut, and Missouri, however, none of these was among the leading industrial States.

At the other end of the scale, with over-the-year declines of 5 percent or more, were a number of widely scattered States-Maine, Rhode Island, Indiana, Wisconsin, Iowa, South Dakota, Kansas, Idaho, and Arizona. A variety of factors contributed to these changes, including in the case of the major industrial States, employment cutbacks in automobiles, farm machinery, and textiles.

$1 /$ tnese figures are based on a slightly smaller sample than those in tables B-1 and B-2, inasmuch as some firms do not report separate data for women.

## APPENDIX

Section A - EMPLOYMENT

## Purpose and Scope of the BLS Employment Statistics Program

Employment statistics for nonfarm industries presented in this monthly Report are part of the broad program of the Bureau of Labor Statistics to provide timely, comprehensive, accurate, and detailed information for the use of businessmen, goverment officials, legislators, labor unions, research workers, and the general public. Current employment statistics furnish a basic indicator of changes in economic activity in various sectors of the economy and are widely used in following business developments and in making decisions in fields of marketing, personnel, plant location, and goverrment policy. The BLS employment statistics program, providing data used in making official indexes of production, productivity and national income, forms an important part of the Federal statistical system.

The BLS publishes monthly the national total of employees in nonagricultural establishments, giving totals by eight major industry divisions: manufacturing; mining; contract construction; transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; service and miscellaneous; and goverment. Series on "all employees" and "production and related workers" are presented for the durable goods and nondurable goods subdivisions of manufacturing, 21 major industry groups in manufacturing, 131 manufacturing sub-groups and also for selected mining industries. "All employees" only are published for over 40 industry groups among the nommanuacturing divisions. Statistics on the number and proportion of women employees in manufacturing industries are published quarterly. In addition, the Bureau of Labor Statistics publishes monthly employment data by industry division for state and local areas, compiled by cooperating State agencies.

Current national, State, and area statistics are published monthly in the Employment and Fayrolls Report. Enployment data for 13 months are presented in the Current Statistics Section of each issue of the Monthly Labor Roview. Each of the series, from the earliest available period to date, may be obtained by writing to the BLS Division of Manpower and Employment Statistics. Such requests should specify the industry series desired. Similar information is available for States and areas. A detailed explanation of the technique of preparing employment statistics will be sent upon request.

BLS employment statistics represent the number of persons employed in establishments in nonagricultural industries in the continental United States during a specified payroll period. Employment data for nongovernmental establishments refer to persons who worked during, or received pay for, any part of the pay period ending nearest the 15 th of the month. Current data for Federal Govermment establishments generally refer to persons who worked on, or received pay for, the last day of the month; for State and local goverment, persons who received pay for any part of the pay period ending on, or immediately prior to, the last day of the month.

Employed persons include those who are working full- or part-time, on a temporary or permanent basis. Persons on an establishment payroll who are on paid sick-leave, paid holiday or paid vacation, or who work during a part of a specified pay period and are unemployed or on strike during the other part of the period are considered employed. Persons on the payroll of more than one establishment during the pay period are counted each time reported. On the other hand, persons who are laid off or are on leave without pay, who are on strike for the entire pay period, or who are hired but do not report to work during the pay period are not considered employed. Since proprietors, self-employed persons, and unpaid family workers do not have the status of "employee," they are not covered by BLS reports. Fersons working as farm workers or as domestic workers in households are not within the scope of data for nonagricultural establishments. Government employment statistics refer to civilian employees only and hence exclude members of the Armed Forces.

Beginning with January 1952, the data for Federal employment are not strictly comparable with those for prior years, primarily as a result of changes in definition. The following changes were made starting with that month: (1) data refer to the last day of the month rather than the first of the month; (2) employment of the Federal Reserve Banks and of the mixed ownership banks of the Farm Credit Administration transferred fram the Federal total and the Executive Branch to the "Banks and Trust Companies" group of the "Finance, Insurance, and Real Estate" division; (3) fourth-class postmasters formerly included only in the table showing Federal civilian employment, now included in all tables showing govermment series except for States and areas; (4) employment in the General Accounting Office and Goverment Printing Office excluded from the Executive Branch and included in the Legislative Branch; (5) the "Defense agencies" category replaced by one showing employment in the Department of Defense only.

## Collection of Establishment Reports

The BLS, with the cooperation of State agencies, collects current employment information for most industries by means of "shuttle" schedules (BLS 790 Forms) mailed monthly to individual establishments. State agencies mail most of the forms and when returned, examine them for consistency, accuracy, and completeness. States use the information to prepare State and area series and send the schedules to the BLS Division of Manpower and

Employment Statistics for use in preparing the national series. Each questionnaire provides a line for the State agency to enter data for December of the previous year, as well as lines for the cooperating establishment to report for each month of the current calendar year. The December data, copied from the completed previous year's form, give the reporter a means for comparison when reporting for January as an aid to collection of consistent data. The same form is returned each month to the reporting establishment to be completed. Definitions of terms are described in detail in the instructions on each form. This "shuttle" schedule, which has been used by BLS for more than 20 years, is designed to assist firms to report consistently, accurately, and with a minimum of cost.

An establishment is defined as a single physical location, such as a factory, mine, or store where business is conducted. In the case of a company with several plants or establishments, the BLS endeavors to obtain separate reports from each business unit which maintains separate payroll records, since each may be classified in a different industry.

## Coverage of Establishment Reports

The Bureau of Labor Statistics obtains monthly reports from approximately 155,000 establishments, distributed by industry as shown by the following table. The table also shows the approximate proportion of total employment in each industry division covered by the group of establishments furnishing monthly employment data. The coverage for individual industries within the divisions may vary from the proportions shown.

Approximate size and coverage of monthly sample used in BLS employment and payroll statistics

| Division or industry | Numberofestablishments | Employees |  |
| :---: | :---: | :---: | :---: |
|  |  | Number in sample | Percent of total |
| Mining。 | 3,300 | 440,000 | 50 |
| Contract constructio | 19,700 | 783,000 | 28 |
| Manufacturing... | 44,100 | 11,207,000 | 68 |
| Transportation and public utilities: |  |  |  |
| Interstate railroads (ICC)............ | --- | 1,357,000 | 96 |
| Other transportation and public utilities (BLS)............................. | 13,600 | 1,430,000 | 51 |
| Wholesale and retail trade.............. | 60,300 | 1,889,000 | 19 |
| Finance, insurance, and real estate.... | 10,600 | 486,000 | 25 |
| Service and miscellaneous: |  |  |  |
| Hotels and lodging places............. | 1,300 | 145,000 | 31 |
| Personal services: |  |  |  |
| Laundries and cleaning and dyeing plants....................................... | 2,300 | 99,000 | 19 |
| Govermment: |  |  |  |
| Federal (Civil Service Commission).... | --- | 2,368,000 | 100 |
| State and local (Bureau of the Censusquarterly). | --- | 2,760,000 | 67 |

To present meaningful tabulations of employment data, establishments are classified into industries on the basis of the principal product or activity determined from information on annual sales volume for a recent year. In the case of an establishment making more than one product, the entire employment of the plant is included under the industry indicated by the most important product. The titles and descriptions of industries presented in the 1945 Standard Industrial Classification Manual, Vol. I (U. S. Bureau of the Budget, Washington, D. C.) are used for classifying reports from manufacturing establishments; the 1942 Industrial Classification Code, (U. S. Social Security Board) for reports from nommanufacturing establishments.

## Benchmark Data

Basic sources of benchmark information are periodic tabulations of employment data, by industry, compiled by State agencies from reports of establishents covered under State unemployment insurance laws. Supplementary tabulations prepared by the U. S. Bureau of Old age and Survivors Insurance are used for the group of establishments exempt from State unemployment insurance laws because of their small size. For industries not covered by either of the two prograns, benchmarks are compiled from special establishment censuses: for example, for interstate railroads, from establishment data reported to the ICC; for State and local government, from data reported to the Bureau of the Census; for the Federal government, from agency data compiled by the Civil Service Conmission. Establishments are classified into the same industrial groupings for benchmark purposes as they are for monthly reporting.

## Estimating Method

The estimating procedure for industries for which data on both "all employees" and "production and related workers" are published (i.e. manufacturing and selected mining industries) is outlined below; the first step of this method is also used for industries for which only figures on "all employees" are published.

The first step, is to compute total employment (all employees) in the industry for the month following the benchmark period. The all-employee total for the benchmark period (March) is multiplied by the percent change over the month of total employment in a group of esiablishments reporting for both March and April. Thus, if firms in the BLS sample report 30,000 employees in March and 31,200 in April, the percentage increase would be 4 percent ( 1,200 divided by 30,000 ). If the all-employee benchmark in March is 40,000, the all-employee total in April would be 104 percent of 40,000 or 41,600.

The second step is to compute the production-worker total for the industry in the month following the benchnark period. The all-employee total for the month is multiplied by the ratio of production workers to all employees. This ratio is computed from those establishment reports which
show data for both items. Thus, if these firms in April report 24,400 production workers and a total of 30,500 employees, the ratio of production workers to all employees would be . 80 (24,400 divided by 30,500). The production-worker total in April would be 33,280 ( 41,600 multiplied by . 80 ).

Figures for subsequent months are computed by carrying forward the totals for the previous month according to the method described above. When amual benchmark data become available, the BLS employment figures for the benchmark period are compared with the total count. If differences are found the BLS series are adjusted to agree with the benchmark count.

## Comparability with Other Employment Estimates

Data published by other goverment and private agencies differ from BLS employment statistics because of differences in definition, sources of information, and methods of collection, classification, and estimation. BLS monthly figures are not comparable, for example, with the estimates of the Bureau of the Census Monthly Report on the Labor Force. Census data are obtained by personal interviews with individual members of a sample of households and are designed to provide information on the work status of the whole population, classified into broad social and economic groups. The BLS, on the other hand, obtains by mail questionnaire data on employees, based on payroll records of business units, and prepares detailed statistics on the industrial and geographic distribution of employment and on hours of work and earnings.

Since BLS employment figures are based on establishment payroll records, persons who worked in more than one establishment during the reporting period will be counted more than once in the BLS series. By definition, proprietors, self-employed persons, domestic servants, and unpaid family workers are excluded from the BLS but not the MRLF series. The two series also differ in date of reference, BLS collecting data for the pay period ending nearest the 15 th of the month (except for goverment), while the MRLF relates to the calendar week containing the 8 th day of the month.

Employment estimates derived by the Bureau of the Census from its quinquennial census and annual sample surveys of manufacturing establishments also differ from BLS employment statistics. Among the important reasons for disagreement are differences in industries covered, in the business units considered parts of an establishment, and in the industrial classification of establishments.

## Bmployment Statistics for States and Areas

State and area employment statistics are collected and prepared by State agencies in cooperation with the Bureau of Labor Statistics. The names and addresses of these agencies are listed on the last page of the Report. State agencies use the same basic schedule as the Bureau of Labor Statistics in collecting employment statistics. State series are adjusted
to benchmark data from State unemployment insurance agencies and the Bureau of 0ld Age and Survivors Insurance. Because some States have more recent benchmarks than others and use slightly varying methods of camputation, the sum of the State figures differs from the official $U$. So totals prepared by the Bureau of Labor Statistics. State and area data in greater industry detail and for earlier periods may be secured directly upon request to the appropriate State agency or to the Bureau of Labor Statistics.

## Section B - LABOR TURN-OVER

## Definition of Labor Turnover

"Labor turnover," as used in this series, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms. This movement is subdivided into two broad types: accessions (new hires and rehires) and separations (terminations of employment initiated by either the employer or the employee). Each type of action is cumulated for a calendar month and expressed as a rate per 100 employees. Rates of accession and separation are shown separately.

Both the types of movement and the employment used as the base for computing labor turnover rates relate to all employees, including executive, office, sales, and other salaried personnel as well as production workers. All groups of employees - full- and part-time, permanent and temporary - are included. Transfers from one establishment to another within a company are not considered to be turnover itens.

A relatively large percent of all personnel turnover is often confined to particular groups of employees, such as new workers, trainees, extra, part-time, and temporary workers. Turnover rates (especially for periods longer tham a month) should not be interpreted as the exact proportion of the total number of persons employed at any point in time who change jobs during a subsequent time interval. For example, a quit rate of 25 per 100 for an annual period (computed by adding the 12 monthly rates) does not mean that 25 percent of all the persons employed at the beginning of a year left their jobs by the end of the year.

The teras used in labor turnover statistics are derined belor:
Separations are terminations of employment during the calendar month and are classified according to cause: quits, discharges, layoffs, and miscellaneous separations (including military), as defined below.

Quits are terminations of employment during the calendar month initiated by employees for such reasons as: acceptance of a job in another company, dissatisfaction, return to school, marriage, maternity, ill health, or voluntary retirement where no company pension is provided. Failure to report after being hired and unauthorized absences of more than seven consecutive calendar days are also classified as quits. Prior to 1940, miscellaneous separations were also included in this category.

Discharges are terminations of employment during the calendar month initiated by the employer for such reasons as employees' incompetence, violation of rules, dishonesty, insubordination, laziness, habitual absenteeism, or inability to meet physical standards.

Layoffs are terminations of employment during the calendar month lasting or expected to last more than seven consecutive calendar days without pay, initiated by the employer without prejudice to the worker, for such
reasons as lack of orders or materials, release of temporary help, conversion of plant, introduction of lahor-saving machinery or processes, or suspensions of operations without pay during inventory periods.

Miscellaneous separations (including military) are terminations of employment during the calendar month because of permanent disability, death, retirement on company pension, and entrance into the Armed Forces expected to last more than thirty consecutive calendar days. Prior to 1940, miscellaneous separations vere included vith quits. Beginning September 1940, military separations vere included here.

Persons on leave of absence (paid or unpaid) with the approval of the employer are not counted as separations until such time as it is definitely determined that such persons will not return to work. At that time, a separation is reported as one of the above types, depending on the circumstances.

Accessions are the total number of permanent and temporary additions to the employment roll during the calendar month, including both nev and rehired employees. Persons returning to work after a layoff, military separation, or other absences who have been counted as separations are considered accessions.

## Source of Data and Sample Coverage

Labor turnover data are obtained each month fram a sample of establishments by means of a mail questionaire. Schedules are received from approximately 7,100 cooperating establishments in the manufacturing, mining, and comunication industries (see below). The definition of manufacturing used in the turnover series is more restricted than in the BLS series on employment, hours, and earnings because of the exclusion of certain manufacturing industries from the labor turmover sample. The major industries excluded are: printing, publishing, and allied industries (since April 1943); canning and preserving fruits, regetables, and sea foods; women's and misses' outerwear; and fertilizer.

## Approximate coverage of BLS labor turnover sample

| Group and industry | Numberofestabl:shments | Kaployees |  |
| :---: | :---: | :---: | :---: |
|  |  | Number in sample | Percent of total |
| Manufacturing | 6,600 | 4.800 .000 | 34 |
| Durable gonds | 4,000 | 3,400,000 | 38 |
| Nondurable goods | 2,600 | 1,400,000 | 27 |
| Metal mining | 130 | 63,000 | 60 |
| Coal mining: |  |  |  |
| Anthracite | 40 | 30,000 | 45 |
| Bituminous | 275 | 120,000 | 33 |
| Communication: |  |  |  |
| Telephone | (1/) | 582,000 | 89 |
| Telegraph ................... | (1/) | 28,000 | 60 |

1/ Data are not available.
44

To compute turnover rates for individual industries, the total number of each type of action (accessions, quits, etc.) reported for a calendar month by the sample establishments in each industry is divided by the total number of employees (both wage and salary workers) reported by these establishments who worked during, or received pay for, any part of the pay period ending nearest the 15 th of that month. To obtain the rate, the result is multiplied by 100.

For example, in an industry sample, the total number of employees who worked during, or received pay for, the week of January $12-18$ was reported as 25,498. During the period Jamuary l-31 a total of 284 employees in all reporting firms quit. The quit rate for the industry is:

$$
\frac{284}{25,498} \times 100=1.1
$$

To compute turnover rates for industry groups, the rates for the component industries are weighted by the estimated employment. Rates for the durable and nondurable goods subdivisions and manufacturing division are computed by weighting the rates of major industry groups by the estimated employment.

## Industry Classification

Beginning with final data for December 1949, manufacturing establishments reporting labor turnover are classified in accordance with the Standard Industrial Classification (1945) code structure. Definitions of nomanufacturing industries are based on the Social Security Board Classification Code (1942).

The durable goods subdivision of manufacturing includes the following major groups: ordnance and accessories; lumber and wood products (except furniture); furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated netal products (except ordnance, machinery, and transportation equipment); macninery (exceps electrical); electrical machinery; transportation equipment; instruments and related products; and miscellaneous manufacturing industries. The nondurable goods subdivision includes the following major groups: food and kindred products; tobacco manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; chemicals and allied products; products of petroleus and coal; rubber products; and leather and leather products.

## Comparability Hith Earlier Data

Labor turnover rates are available on a comparable basis from January 1930 for manufacturing as a whole and from 1943 for two coal mining and two commuication industries. Because of a major revision, labor turnover rates for many individual industries and industry groups for the period prior to December 1949 are not comparable with the rates for the subsequent period.

The ravision of the turnover series involved (1) the adoption of the Standard Indistrial Classification (1945) code structure for the manufacturing inaustries, providing new industry definitions and groupings (the industry definitions of the Social Security Board Classification Code (1942) were used in the series beginning in 1943 and of the Census of Manufactures in series prior to 1943), and (2) the introduction of weighting (according to employment in the componemt industries) in the computation of industrygroup rates. In the Bureau's previous series, industry-group rates were computed directly from the sample of reporting establishments without regard to the relative veight of the component industries.

## Comparability With Fhployment Series

Month-to-month changes in total employment in manufacturing industries reflected by labor turnover rates are not comparable with the chamges shown in the Bureau's employment series for the following reasons:
(1) Accessions and separations are computed for the entire calendar-month; the employment reports, for the most part, refer to a l-week pay period ending nearest the lith of the wonth.
(2) The turnover sample is not as large as the employnent sample and includes proportionately fewer small plants; certain industries are not covered (see paragraph on source of data and sample coverage).
(3) Plants are not included in the turnover computations in months when work stoppages are in progress; the influence of such stoppages is reflected, however, in the employment ifgures.

## Publications

Additional information on concepts, methcdology, etc., is given in a "Technical Note on Measurement of Labor Turnover," which is available upon request. This note appeared in the May 1953 Monthiy Labor Review (pp. 519-522). Sumary tables showing monthly labor turnover rates in each of the selected industry groups and industries for earlier years are available upon request. Such requests should specify the industry series desired.

## GLOSSARY

ALL EMFIOYEES - Includes production and related workers as defined below and workers engaged in the following activities: executive, purchasing, finance, accounting, legal, personnel (including cafeterias, medical, etc.), professional and technical activities, sales, sales-delivery, advertising, credit collection, and in installation and servicing of own products, routine office functions, factory supervision (above the working foreman level). Also includes employees on the establishment payroll engaged in new construction and major additions or alterations to the plant who are utilized as a separate work force (force-account construction workers). Froprietors, self-employed persons, damestic servants, unpaid family workers, and members of the Armed Forces are excluded.

CONTRACT CONSTRUCTION - Covers only firms engaged in the construction business on a contract basis for others. Force-account construction workers, i.e., hired directly by and on the payroll of Federal, State, and local government, public utilities, and private establishments, are excluded from contract construction and included in the employment for such establishments.

DURABLE GOODS - The durable goods subdivision includes the following major industry groups: ordnance and accessories; lumber and wood products (except furniture); furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated metal products (except ordnance, machinery, and transportation equipment); machinery (except electrical); electrical machinery; transportation equipment; instruments and related products; and miscellaneous mamufacturing industries.

FINANCE, INSURANCE, AND REAL ESTATE - Covers establishments operating in the fields of finance, insurance, and real estate, and beginning January 1952, also includes the Federal Reserve Ranks and the mixed-ownership banks of the Farm Credit Administration for national estimates. However, in State and area estimates the latter two agencies will be included under Government until revisions are made in series prepared by cooperating State agencies.

GOVERNMENT - Covers Federal, State, and local goverment establishments performing legislative, executive, and judicial functions, including Government corporations, Government force-account construction, and such units as arsenals, navy yards, and hospitals. Fourth-class postmasters are included in the national series, but will be excluded fram State and area estimates pending revisions in series prepared by cooperating State agencies. State and local government employment excludes, as nominal employees, paid volunteer firemen and elected officials of small local units.

MANJFACTURING - Covers only private establishments. Government manufacturing operations such as arsenals and navy yards are excluded from manufacturing and included under Government.

MINING - Covers establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; includes various contract services required in mining operations, such as removal of overburden, tunneling and shafting, and the drilling or acidizing of oil wells; also includes ore dressing, beneficiating, and concentration.

NONDURABLE GOODS - The nondurable goods subdivision includes the following major industry groups: food and kindred products; tobacco manufactures: textile-mill products; apparel and other finished textile products; paper and allied products; printing, publishing, and allied industries; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products. Labor turnover data exclude printing, publishing, and allied industries.

PAYROLL - Private payroll represent weekly payroll of both full- and parttime production and related workers who worked during, or received pay for, any part of the pay period ending nearest the l5th of the month, before deduction for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues; also, includes pay for sick leave, holidays, and vacations taken. Excludes cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, and bonuses, unless earned and paid regularly each pay period. The index in table A-4 represents production-worker average weekly payroll expressed as a percentage of average weekly payroll for the 1947-49 period. Aggregate weekly payroll for all manufacturing is derived by multiplying gross average weekly earnings by production-worker employment.

PRODUCTION AND REIATED WORKERS - Includes working foremen and all nonsupervisory workers (including lead men and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handing, packing, warehousing, shipping, maintenance, repair, janitorial, watchman services, products development, auxiliary production for plant's own use (e.g., power plant), and record-keeping and other services closely associated with the above production operations. The index in table A-4 represents the number of production and related workers in manufacturing expressed as a percentage of average monthly production-worker employment in the 1947-49 period.

SERVICE AND MISCRLLANBOUS - Covers establishments primarily engeged in rendering services to individuals and business firms, including automotive repair services. Excludes domestic service workers. Nongovernment schools, hospitals, museums, etc. are included under service and miscellaneous; similar Government establishments are included under Government.

TRANSPORTATION AND PUBLIC UTILITITES - Covers only private establishments engaged in providing all types of transportation and related services; telephone, telegraph, and other communication services; or providing electricity, gas, steam, water, or sanitary service. Similar Government establishments are included under Government.

WHOIESALE AND RETAIL TRADE - Covers establishments engaged in wholesale trade, i.e., selling merchandise to retailers, and in retail trade, i.e., selling merchandise for personal or household consumption, and rendering services incidental to the sales of goods. Similar Government establishments are included under Government.
