# EMPLOYMENT end Paralles 

Monthly Statistical Report

## MARCH 1954

UNITED STATES DEPARTMENT OF LABOR James P. Mitchell, Secretary

BUREAU OF LABOR STATISTICS
Ewan Clague Commissioner

# Publications on <br> Employment Developments 

# Available from <br> the Bureau of Labor Statistics 

The Bureau of Labor Statistics program in the measurement and analysis of employment trends includes (1) the preparation of current monthiy statistics on employment, labor turnover, and hours and earnings in major industries, States and areas; (2) the interpretation of these employment trends; (3) the analysis of long-term trends in employment in major occupations and industries; and (4) the preparation of estimates of manpower requirements for the defense mobilisation program and estimates of prospective labor supply. Employment statistics are prepared in cooperation with State agencies.

Listed below and continued on the (inside) back cover are the major reports available to the public. Distribution is free unless othermise noted. Requests for these publications specifying exact titles, should be addressed to the Bureau of Labor Statistics, U. S. Department of Labor, Washington 25, D. C.

#### Abstract

EMPLOYMENT AND PAYROLLS-Emplovment figures presented for approximately 200 individual industries, for 48 States and the District of Columbia and for selected areas, in varying induitry detail. Report also contains analysis of latest monthly employment trends and current and anticipated developments in selected industries. Turnover data on hiring, quits, layoffs, and discharges shown for 125 manufacturing and selected nonmanufacturing industries on a national basis only. Separate press releases on employment and labor turnover giving analysis of current trends in broad industry groups based on preliminary data are available earlier. All reports are published monthly. Separate data for manufacturing industries showing turnover rates for men and women and employment of women are available quarterly.

HOURS AND EARNINGS-Average weekly earnings, average weekly hours, and average hourly earnings for approximately 300 industries, and for $S t a t e s$ and selected areas. Press release, gi¥ing analysis of current trenda in broad industry groups based on preliminary data, available approximately 2 weeks earlier. Both reports published monthly.

These publications prepared by DIVISION OF MANPOWER AND EMPLOYMENT STATISTICS

Seymour L. Wolfbein, Chief

MONTHLY STATISTICAL REPORT

Released March 25, 1954

## Cleveland and Cincinnati

 metropoliten area seriesBeginning with this issue, table A-9 contains manufacturing employment data for the Cleveland and Cincinnati metropoliten areas. Historical data are available from January 1952 for the Cleveland area and from January 1953 for the Cincinnati area.

## Employment Data at a Glance

1/ Figures for the latest month are preliminary.

## Employment Trends

FACTORY JOBS STILL DECREASING AS OTYER INDUSTRIES MAINTAIN HIGH EMPLOYMENT

The employment downtrend of the past half year continued through Febmuary but with signs of some slowing down in the rate of decline, according to a recent analysis of the employment situation released by the U. S. Department of Labor. Manufacturing industries made further reductions in their workforce, but factory hours were unchanged and employment in nonmanufacturing industries was maintained at record levels for the season. Unemployment, as measured by persons claiming unemployment insurance benefits, rose through February, but by the month's end the number of new claimants was declining by more than the usual amount for this time of year.

Employment in nonfarm establishments went down by 300,000 between January and February and at 47.5 million was about 900,000 lower than a year earlier. However, the loss was concentrated in manufacturing where a downtrend has been evident since mid-1953. The nonmanufacturing total this month was actually above the previous record for February reached last year.

Nearly all manufacturing industry groups reported decreases in their workforces between January and February. The total manufacturing dečline, however, was only $150,000-$
the smallest for any single month since last fall. Most of the reported reduction occurred in durable goods manufacturing, particum larly transportation equipment, primary and fabricated metals, electrical machinery, and ordnance. Over-the-month employment gains were reported in apparel, leather, and miscellaneous manufacturing (including toys and jewelry), where the approach of the Easter shopping season usually is accompanied by stepped-up hiring. This year, however, the increases in apparel and miscellaneous manufacturing were smaller than usual.

The manufacturing employment total this February of 16.0 million was about 1 million less than a year earlier. However, the February 1953 level was about equal to the postwar peaks for the month reached in 1951 and 1952.

All industry groups, except paper and printing, showed some over-the-year drop in employment. The largest declines-exceeding 100,000-occurred in primary metals, machinery, transportation equipment and textiles. About half of the year's manufacturing employment loss was concentrated in these four industries. In textiles, the developments of recent months, combined with a long-term employment downtrend in certain sectors of the industry, brought the workforce to pre-World War II levels. On the

Other hand, transportation equip-ment-including automobiles and air-craft-still employed more workers this February than in any postwar February before 1953.

In nonmanufacturing sectors of the economy, employment changes between January and February largely conformed to the expected seasonal pattern. Employment in nonmanufacturing industry as a whole has been maintained at record levels throughout the recent downturn in manufacturing. Over the past year, employment gains in retail grade, finance, service, and State and local government has more than made up for decreases in mining, construc tion, transportation, and Federal government.

Although the number of workers on construction contractors' payrolls was down slightly over the year, construction employment has been maintained at generally high levels. Between January and February, the employment decline was only 11,000, according to preliminary estimates-one of the smallest drops recorded for this season in recent years. At 2-1/4 million in February, the construction employment level was close to the alltime peak for the month reached in 1952.

The number of employees in retail stores and wholesaling operations declined by 89,000 between January and February. This was no more than the typical mid-winter reduction in trade employment. At 10.3 million in February, trade employment was at an all-time high for the season, reflecting the continued strength of consumer buying.

The number of workers on government payrobls-Federal, state and local-totaled 6.7 million in February, about the same as in the preced-
ing month. Over the year, the increase was about 100,000 as expansion of state and local governments outweighed the continued curtailment of Federal activities.

## FACTORY HOURS LEVEL OFF IN FEBRUARY

At an average of 39.5 hours in February, the workweek of factory production workers was about equal to the postwar low for the month reached in 1949. The drop from the postwar highs for the season, reached in 1951 and 1953, was almost $1-1 / 2$ hours. However, this was the first time in more than a half year when, after allowance for seasonal factors, hours did not show a continued downtrend. The workweek in lumber, apparel, and rubber rose by an hour or more between January and February. Seasonal factors partly explain the longer workweek in lumber and apparel, but the increase this year was greater than usual in these industries, and in rubber, the gain contrasted with the reductions usually occurring at this time of year.

The combined effects of changes in employment and hours of work in manufacturing industries are measured by man-hours indexes. Aggregate weekly man-hours of factory production workers have declined sharply over the past year, to an index for February of 101.4 (19471949 average $=100$ ). At this level, the index was the lowest for the month since 1950. However, the decline of about 1 point between January and February of this year was the smallest over-the-month drop since last Fall.

At its post-World War II peak in June, 1953, the index was 113.7, compared to 99.2 in the pre-Korea month of June 1950. In the second
half of 1953 the index began to slide, reflecting cutbacks in overtime and reductions in the workforce. By February of 1954 the index was down 11 percent over the year, with all industry groups showing some decreases.

Underlying the over-all drop in factory man-hours were wide differences among industries. In six industry groups-food, chemicals, petroleum, paper, printing, and miscellaneous manufacturing-me over-the-year reduction was less than 5 percent. In two of these groups-paper and printing, February 1954 levels were close to the post-war peaks for the month, despite the drop during the year.

On the other hand, the man-hour indexes for three groups-mprimary metals, textiles, and furniturefell by more than 15 percent between February 1953 and February 1954, bringing man-hours in these industries to about the lowest point for the month since the end of World War II.

Seven industry groups reported over-the-year declines in man-hours in the 10 to 15 percent range. How ever in ordnance, electrical machinery, and transportation equipment, aggregate man-hours in February 1954 were the highest for the month except for the all-time peak of 1953.

## LAYOFF RATE UNCHANGED OVER THE

 MONTHPossible slackening in the employment downtrend was indicated by the leveling off in the layoff rate in manufacturing plants between December 1953 and January 1954, contrasting with the steady
increases reported throughout the preceding half year. At the rate of 25 per 1000 employees, however, January layoff rates were considerably above the average for the month in recent years.

While layoffs remained unchanged over the month, the hiring rate rose from 21 per thousand workers in December to 28 per housand in January. Hiring usually increases at this time of year, reflecting preparations for the Spring selling season in many consumer goods industries. However, the rise this January was roughly half the average for the season during the 1947-53 period. Also, it followed a half year of almost steady slackening in hiring rates. As a result, hiring in January was about one-third below the postwar average for the month.

Between December and January, hiring rates increased in every major manufacturing group, except transportation equipment and stone, clay, and glass products. However, the pickup in hiring for pre-Easter expansion in textiles, furniture, apparel, leather, and toys and other miscellaneous manufacturing was smaller than in most other postsar years. Less-than-usual expansion in hiring also characterised primary metals, electrical machinery, and instruments.

The rate at which factory workers quit their jobs wes unchanged between January and February, contrasting with the increase experienced over these months in almost every postwar year. Quit rates have declined steadily since the early Fall of 1953. The January rate at 11 per 1,000 employees equalled the postwar low for the month reached in 1950.

## NEW UNEMPLOYMENT CLADMS DECLINE

Insured unemployment, as compiled by the Bureau of Employment Security, continued upward between January and February, for the first time since 1949. However, there were indications that the rise in unemploynent might be slackening. The increase of 77,000 over the month was about one-half the 1949 increase. At the same time, the rate at which workers were losing their jobs has been declining since early January, after having shown a steady uptrend for a number of months. Initial claims for unemployment insurance benefits, which represent new unemployment, declined at a greater than usual rate during February, to a level of 288,000 during the week ending February 27. The drop during the month was about onemfourth.

While nationally the rate of insured employment in mid-February was about 6 percent, the rate varied from a low of 3 percent in Texas and Florida to over 11 percent in Oregon, Idaho, Washington and Rhode Island.

Insured unemployment was appreciably above previous postwar peaks for the season in about half of the large industrial states. In Indiana, North Carolina, Wisconsin, Michigan, Georgia, and Tennessee the level was more than one-fourth
above the previous postwar peak for this time of year, reflecting continued unemployment in a wide range of industries, particularly automobiles, textiles, and machinery.

## FACTORY PAY GENERALLY STABLE

Earnings of factory workers showed little change between January and February, continuing the generally stable pattern of recert months. Gross hourly earnings, including overtime and other premium pay, averaged $\$ 1.79$ in mid-February. Since last September, hourly earnings have varied by no more than one cent from month to month, as increases in wage rates almost exactly balanced the loss in overtime pay. However, hourly pay this February was 5 cents higher than a year earlier, largely because of increases in the first part of 1953.

On a weekly basis, factory production workers averaged $\$ 70.71$ in mid-February. Reflecting the drop in the workweek, this was 46 cents less than a year earlier. In many industries, however, increases in hourly pay outweighed the effects of the reduced workweek. As a result, weekly earnings were up appreciably from last February's levels in ordnance, electrical machinery, printing, lood, tobacco, chemicals, petroleum, and stone, clay, and glass products.

| Private yards.......................... | 5.0 | 5.2 | 5.3 | 4.9 | 4.8 |

1/ The North Atlantic resion includes all yards bordering on the atiantic in the foliowing States: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

The South Atiantic region includes all yards bordering on the Atiantic in the following States: plorida, Georgia, North Caroilna, South Carolina, and Virginia.

The Gulf region includes all yards bordering on the Gulf of Mexico in the following States: Alabana, Florida, Loulsiana, Mississippi, and Texas.

The Pacific region includes all yards in California, Oregon, and Washington.
The Great Lakes region includes all yards bordering on the Great fakes in the following States: Ilinois, Michisan, Minnesota, New York, Ohio, Pennsylvania, and Wisconsin.

The Inland region includes all other sards.
2/ Data Include Curtis Bay Coast Guard Yard.

* Finance and government conform with definitions used for national series show in gloseary.

1/ Includes mining.
2/ Revised serics; not strictly comparable with previously published data.
3 / Includes mining and finance.
4/ Subarea of New Iork-Northeastern New Jersey.
$\overline{5} /$ Includes minting ani government.
6/ Revised series; not comparable with previously published data. Series now include additional toms in Windim county.
7/ Not avallable.

## APPENDIX

Section A - EMPLOYMENT

## Purpose and Scope of the BLS Enployment Statistics Frogram

Employment statistics for nonfarm industries presented in this monthly Report are part of the broad program of the Bureau of Labor Statistics to provide timely, comprehensive, accurate, and detailed information for the use of businessmen, goverrment officials, legislators, labor unions, research workers, and the general public. Current employment statistics furnish a basic indicator of changes in economic activity in various sectors of the economy and are widely used in following business developments and in making decisions in fields of marketing, personnel, plant location, and goverrment policy. The BLS employment statistics program, providing data used in making official indexes of production, productivity and national income, forms an important part of the Federal statistical system.

The BLS publishes monthly the national total of employees in nonagricultural establishments, giving totals by eight major industry divisions: manufacturing; mining; contract construction; transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; service and miscellaneous; and goverrment. Series on "all employees" and "production and related workers" are presented for the durable goods and nondurable goods subdivisions of manufacturing, 21 major industry groups in manufacturing, 131 manufacturing sub-groups and also for selected mining industries. "All employees" only are published for over 40 industry groups among the nomanufacturing divisions. Statistics on the number and proportion of women employees in manufacturing industries are published quarterly. In addition, the Bureau of Labor Statistics publishes monthly employment data by industry division for state and local areas compiled by cooperating state agencies.

Current national, State, and area statistics are published monthly in the Employment and Fayrolls Report. Employment data for 13 months are presented in the Current Statistics Section of each issue of the Monthly Labor Review. Each of the series, from the earliest available period to date, may be obtained by writing to the BLS Division of Manpower and Fmployment Statistics. Such requests should specify the industry series desired. Similar information is available for States and areas. A detailed explanation of the technique of preparing employment statistics will be sent upon request.

BLS employment statistics represent the number of persons employed in establishments in nonagricultural industries in the continental United States during a specified payroll period. Employment data for nongovernmental establishments refer to persons who worked during, or received pay for, any part of the pay period ending nearest the 15 th of the month. Current data for Federal Goverment establishments generally refer to persons who worked on, or received pay for, the last day of the month; for State and local goverment, persons who received pay for any part of the pay period ending on, or immediately prior to, the last day of the month.

Enployed persons include those who are working full- or part-time, on a temporary or permanent basis. Persons on an establishment payroll who are on paid sick-leave, paid holiday or paid vacation, or who work during a part of a specified pay period and are unemployed or on strike during the other part of the period are considered employed. Persons on the payroll of more than one establishment during the pay period are counted each time reported. On the other hand, persons who are laid off or are on leave without pay, who are on strike for the entire pay period, or who are hired but do not report to work during the pay period are not considered employed. Since proprietors, self-employed persons, and unpaid family workers do not have the status of "employee," they are not covered by BLS reports. Fersons working as farm workers or as domestic workers in households are not within the scope of data for nonagricultural establishments. Government employment statistics refer to civilian employees only and hence exclude members of the Armed Forces.

Beginning with January 1952, the data for Federal employment are not strictly comparable with those for prior years, primarily as a result of changes in definition. The following changes were made starting with that month: (1) data refer to the last day of the month rather than the first of the month; (2) employment of the Federal Reserve Banks and of the mixed ownership banks of the Farm Credit Administration transferred from the Federal total and the Executive Branch to the "Banks and Trust Companies" group of the MFinance, Insurance, and Real Estate" division; (3) fourth-class postmasters formerly included only in the table showing Federal civilian employment, now included in all tables showing govermment series except for States and areas; (4) employment in the General Accounting Office and Goverment Printing Office excluded from the Executive Branch and included in the Legislative Branch; (5) the "Defense agencies" category replaced by one showing employment in the Department of Defense only.

## Collection of Establishment Reports

The BLS, with the cooperation of State agencies, collects current employment information for most industries by means of "shuttle" schedules (BLS 790 Forms) mailed monthly to individual establishments. State agencies mail most of the forms and when returned, examine them for consistency, accuracy, and completeness. States use the information to prepare State and area series and send the schedules to the BLS Division of Manpower and

Employment Statistics for use in preparing the national series. Each questionnaire provides a line for the State agency to enter data for December of the previous year, as well as lines for the cooperating establishment to report for each month of the current calendar year. The December data, copied from the completed previous year's form, give the reporter a means for comparison when reporting for January as an aid to collection of consistent data. The same form is returned each month to the reporting establishment to be completed. Definitions of terms are described in detail in the instructions on each form. This "shuttle" schedule, which has been used by BLS for more than 20 years, is designed to assist firms to report consistently, accurately, and with a minimum of cost.

An establishment is defined as a single physical location, such as a factory, mine, or store where business is conducted. In the case of a company with several plants or establishments, the BLS endeavors to obtain separate reports from each business unit which maintains separate payroll records, since each may be classified in a different industry.

## Coverage of Establishment Reports

The Bureau of Labor Statistics obtains monthly reports fram approximately 155,000 establishments, distributed by industry as shown by the following table. The table also shows the approximate proportion of total employment in each industry division covered by the group of establish. ments furnishing monthly employment data. The coverage for individual industries within the divisions may vary from the proportions shown.

Approximate size and coverage of monthly sample
used in BLS employment and payroll statistics

| Division or industry | Numberofestablishments | Employees |  |
| :---: | :---: | :---: | :---: |
|  |  | Number in sample | Percent of total |
| Mining.. | 3,300 | 440,000 | 50 |
| Contract construction.................... | 19,700 | 783,000 | 28 |
| Manufacturing•............................. | 44,100 | 11,207,000 | 68 |
| Transportation and public utilities: |  |  |  |
| Interstate railroads (ICC)........... Other transportation and public | -- | 1,357,000 | 96 |
| utilities (BLS).................. | 13,600 | 1,430,000 | 51 |
| Wholesale and retail trade............... | 60,300 | 1,889,000 | 19 |
| Finance, insurance, and real estate.... | 10,600 | 486,000 | 25 |
| Service and miscellaneous: |  |  |  |
| Hotels and lodging places. Personal services: | 1,300 | 145,000 | 31 |
| Laundries and cleaning and dyeing <br>  | 2,300 | 99,000 | 19 |
| Goverrment: |  |  |  |
| Federal (Civil Service Canmission).... | --- | 2,368,000 | 100 |
| State and local (Bureau of the Censusquarterly) | -- | 2,760,000 | 67 |

To present meaningful tabulations of employment data, establishments are classified into industries on the basis of the principal product or activity determined from information on annual sales volume for a recent year. In the case of an establishment making more than one product, the entire employment of the plant is included under the industry indicated by the most important product. The titles and descriptions of industries presented in the 1945 Standard Industrial Classification Manual, Vol. I (U. S. Bureau of the Budget, Washington, ). C.) are used for classifying reports from manufacturing establishments; the 1942 Industrial Classification Code, (U. S. Social Security Board) for reports from nonmanufacturing establishments.

## Benchmark Data

Basic sources of benchmark information are periodic tabulations of employment data, by industry, compiled by State agencies from reports of establishments covered under State unemployment insurance laws. Supplementary tabulations prepared by the U. S. Bureau of Old Age and Survivors Insurance are used for the group of establishments exempt from State unemployment insurance laws because of their small size. For industries not covered by either of the two prograns, benchmarks are compiled from special establishment censuses: for example, for interstate railroads, from establishment data reported to the ICC; for State and local government, from data reported to the Bureau of the Census; for the Federal government, from agency data compiled by the Civil Service Commission. Establishments are classified into the same industrial groupings for benchmark purposes as they are for monthly reporting.

## Estimating Method

The estimating procedure for industries for which data on both "all employees" and "production and related workers" are published (i.e. manufacturing and selected mining industries) is outlined below; the first step of this method is also used for industries for which only figures on "all employees" are published.

The first step is to compute total employment (all employees) in the industry for the month following the benchmark period. The all-employee total for the benchmark period (March) is multiplied by the percent change over the month of total employment in a group of establishments reporting for both March and April. Thus, if firms in the BLS sample report 30,000 employees in March and 31,200 in April, the percentage increase would be 4 percent ( 1,200 divided by 30,000 ). If the all-employee benchnark in March is 40,000, the all-employee total in April would be 104 percent of 40,000 or 42,600.

The second step is to compute the production-worker total for the industry in the month following the benchnark period. The all-employee total for the month is multiplied bv the ratio of production workers to all employees. This ratio is computed fram those establishment reports which

## 42

show data for both items. Thus, if these firms in April report 24, 400 production workers and a total of 30,500 employees, the ratio of production workers to all employees would be . 80 (24,400 divided by 30,500). The production-worker total in April would be 33,280 ( 41,600 multiplied by . 80 ).

Figures for subsequent months are computed by carrying forward the totals for the previous month according to the method described above. When amual benchmark data become available, the BLS employment figures for the benchmark period are compared with the total count. If differences are found the BLS series are adjusted to agree with the benchmark count.

## Comparability with Other Employment Estimates

Data published by other goverment and private agencies differ from BLS employment statistics because of differences in definition, sources of information, and methods of collection, classification, and estimation. BLS monthly figures are not comparable, for example, with the estimates of the Bureau of the Census Monthly Report on the Labor Force. Census data are obtained by personal interviews with individual members of a sample of households and are designed to provide information on the work status of the whole population, classified into broad social and economic groups. The BLS, on the other hand, obtains by mail questionnaire data on employces, based on payroll records of business units, and prepares detailed statistics on the industrial and geographic distribution of employment and on hours of work and earnings.

Since BLS employment figures are based on establistment payroll records, persons who worked in more than one establishment during the reporting period will be counted more than once in the BLS series. By definition, proprietors, self-employed persons, domestic servants, and unpaid family workers are excluded from the BLS but not the MRLF series. The two series also differ in date of reference, BLS collecting data for the pay period ending nearest the 15 th of the month (except for govermment), while the MRLF relates to the calendar week containing the 8 th day of the month.

Employment estimates derived by the Bureau of the Census from its quinquennial census and annual sample surveys of manufacturing establishments also differ from BLS employment statistics. Among the important reasons for disagreement are differences in industries covered, in the business units considered parts of an establishment, and in the industrial classification of establishments.

Enployment Statistics for States and Areas
State and area employment statistics are collected and prepared by State agencies in cooperation with the Bureau of Labor Statistics. The names and addresses of these agencies are listed on the last page of the Report. State agencies use the same basic schedule as the Bureau of Labor Statistics in collecting employment statistics. State series are adjusted
to benchmark data from State unemployment insurance agencies and the Bureau of Old Age and Survivors Insurance. Because some States have more recent benchmarks than others and use slightly varying methods of camputation, the sum of the State figures differs from the official U. So totals prepared by the Bureau of Labor Statistics. State and area data in greater industry detail and for earlier periods may be secured directly upon request to the appropriate State agency or to the Bureau of Labor Statistics.

## Section B - LABOR TURN-OVER

## Definition of Lebor Turnover

"Labor turnover," as used in this series, refers to the gross movement of wage and salary workers into and out of employment status with respect to individual firms. This movement is subdivided into two broad types: accessions (new hires and rehires) and separations (terminations of employment initiated by either the employer or the amployee). Each type of action is cumulated for a calendar month and expressed as a rate per 100 employees. Rates of accession and separation are shown separately.

Both the types of movement and the employment used as the base for computing labor turnover rates relate to all employees, including executive, office, sales, and other salaried personnel as well as production workers. All groups of employees - full- and part-time, permanent and temporary - are included. Transfers from one establishment to another within a company are not considered to be turnover items.

A relatively large percent of all personnel turnover is often confined to particular groups of employees, such as new workers, trainees, extra, part-time, and temporary workers. Turnover rates (especially for periods longer than a month) should not be interprotod as the exact proportion of the total number of persons employed at any point in time who change jobs during a subsequent time interval. For example, a quit rate of 25 per 100 for an amual period (computed by adding the 12 monthly rates) does not mean that 25 percent of all the persons amployed at the begimning of a year left their jobs by the and of the jear.

The terns used in labor turmover statistics are defined below:
geparations are terninations of employment during the calendar month and are clasified according to cause: quits, discharges, layoffs, and miscellancous separations (including military), as defined below.

Quite are terminations of employnent during the calendar month initiated by enployees for such reasons as: acceptance of a job in another company, dissatisfaction, return to shool, marriage, maternity, ill health, or voluntary retirement where no company pension is provided. Failure to report after being hired and unauthorized absences of more than seven consecutive calondar days are also classified as quits. Prior to 1940, miscellaneous separations were also included in this category.

Discharges are terminations of employment during the calendar month initiated by the employer for such reasons as employees' incompetence, violation of rules, dishonesty, insubordination, laziness, habitual absenteeism, or imability to meet physical standards.

Layoffs are terminations of employment during the calendar month lasting or expected to last more than seven consecutive calendar days without pay, initiated by the enployer without prejudice to the worker, for such
reasons as lack of orders or materials, release of temporary help, conversion of plant, introduction of labor-saving machinery or processes, or suspensions of operations without pay during inventory periods.

Miscellaneous separations (including military) are terminations of employment during the calendar month because of permanent disability, death, retirement on company pension, and entrance into the Armed Forces expected to last more than thirty consecutive calendar days. Prior to 1940, miscellaneous separations vere included vith quits. Beginaing Septamber 1940, military separations vere included here.

Persons on leave of absence (paid or unpaid) with the approral of the employer are not counted as separations until such tine as it is defiaitely determined that such persons will not return to work. At that time, a separation is reported as one of the above typee, depending on the circurstances.

Accessions are the total number of permanent and temporary additions to the employment roll during the calendar month, including both new and rehired employees. Persons returining to work after a layoff, military separation, or other absences who have been counted as eparations are considered accessions.

## Source of Data and Sample Coverage

Labor turmover data are obtained each month fron a sample of establishnents by meams of a mail questionaire. Schedules are received from approximately 7,100 cooperating establishments in the manufacturing, mining, and comunication industries (see below). The defiaition of manufacturing used in the turnover series is more restricted thas in the bLS series on employment, hours, and earnings because of the exclusion of certain manufacturing industries from the labor turmover sample. The major industries excluded are: printing, publishing, and allied industries (since April 1943); canning and preserving fruits, regetables, and sea foode; women's and misses' outerwear; and fertilizer.

Approximate coverage of BLS labor turnover sample

| Group and industry | Numberofestablishments | Ruplorees |  |
| :---: | :---: | :---: | :---: |
|  |  | $\begin{gathered} \text { Number in } \\ \text { sample } \end{gathered}$ | Percent of total |
| Manufacturing | 6,600 | 4,800,000 | 34 |
| Durable goods | 4,000 | 3,400,000 | 38 |
| Nondurable goods | 2,600 | 1,400,000 | 27 |
| Metal mining | 130 | 63,000 | 60 |
| Coal mining: |  |  |  |
| Anthracite | 40 | 30,000 | 45 |
| Bituminour ...................... | 275 | 120,000 | 33 |
| Communication: |  |  |  |
| Telephone .......................... | (1/) | 582,000 | 89 |
| Telegraph ......................... | (1/) | 28,000 | 60 |

1/ Data are not available.
46

## Method of Computation

To compute turnorer rates for individual industries, the total mumber of each type of action (accessions, quits, etc.) reported for a calendar month by the eample establishments in each industry is divided by the total number of employees (both vage and salary workers) reported by these establishments who worked during, or received pay for, any part of the pay period ending nearest the 15 th of that month. To obtain the rate, the reault is multiplied by 100.

For example, in an industry sample, the total number of employees who worked during, or received pay for, the week of January 12-18 was reported as 25,498. During the period January 1-31 a total of 284 employees in all reporting firns quit. The quit rate for the industry is:

$$
\frac{284}{25,498} \times 100=1.1
$$

To compute turnover rates for industry groups, the rates for the component industries are veighted by the eatimated eaploynent. Rates for the durable and nondurable goods aubdivisions and manufacturing division are computed by weighting the rates of major induatry groupa by the eatimated employnent.

## Industry Clansification

Beginning with final data for December 1949, manufacturing entablishmenta reporting labor turnover are clasified in accordance with the Standard Industrial Classification (1945) code structure. Definitions of nomanufacturing industries are based on the Social Security Board Clagsification Code (1942).

The durable goode aubdivision of manufacturing includes the following major groups: ordmance and accessories; lumber and wood products (except furniture); furniture and fixtures; stome, clay, and glase products; primary metal induetries; fabricated metal products (axcept ordmance, machinery, and transportation equipment); machinery (axcept electrical); electrical machinery; transportation equipment; instruments and related products; and miscellaneous manufacturing industries. The mondurable goode mbdivision includes the following major groups: food and kindred products; tobaceo manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products.

## Comparability With Earlior Data

Labor turnover rates are available on a comparable basis from January 1930 for manufacturing as a whole and from 1943 for two coal mining and two comunication industries. Because of a major revision, labor tumover rates for many individual industries and industry groupe for the period prior to December 1949 are not comparable with the rates for the subsequent period.

The revision of the turnover series involved ( 1 ) the adoption of the Standard Industrial Classification (1945) code etructure for the manufacturing industries, providing new induetry definitions and groupings (the industry definitions of the Social Becurity Board Classification Code (1942) were used in the series beginning in 1943 and of the Consus of Manufactures in series prior to 1943), and (2) the introduction of veighting (according to employment in the component induetries) in the computation of industrygroup rates. In the Bureau's previous series, industry-group rates were computed directiy from the ample of reporting establishments without regard to the relative weight of the component industries.

## Comparability With Enplopment Series

Month-to-month changes in total enployment in mamufacturing induetries reflected by labor turnover rates are not comparable with the changen chow in the Burean's employment series for the following reasong:
(1) Accessions and separations are computed for the entire calendar-month; the employment reports, for the nost part, refer to a l-week pay period ending nearest the l5th of the month.
(2) The turnover sanple is not as large as the enployment sample and includes proportionately fewer mall plants; certain industries are not covered (see paragraph on source of data and sample coverage).
(3) Plants are not included in the turnover conputations in months when work etoppages are in progress; the influence of auch stoppages is reflected, however, in the enployment figures.

## Publications

Additional information on concepts, mothodology, etc., is given in a "Technical Note on Measurement of Labor Turnover," which is available upon request. This note appeared in the May 1953 Monthly Labor Revier (pp. 519-522). Sumary tables showing monthly labor turnover rates in each of the selected industry groups and induatries for earlier years are svailable upon request. Such requests should specify the industry series desired.

## GLOSSARY

ALL EMPLOYEES - Includes production and related workers as defined below and workers engaged in the following activities: executive, purchasing, finance, accounting, legal, personnel (including cafeterias, medical, etc.), professional and technical activities, sales, sales-delivery, advertising, credit collection, and in installation and servicing of own products, routine office functions, factory supervision (above the working foreman level). Also includes employees on the establishment payroll engaged in new construction and major additions or alterations to the plant who are utilized as a separate work force (force-account construction workers). Proprietors, self-employed persons, domestic servants, unpaid family workers, and members of the Armed Forces are excluded.

CONTRACT CONSTRUCTION - Covers only firms engaged in the construction business on a contract basis for others. Force-account construction workers, i.e., hired directly by and on the payroll of Federal, State, and local government, public utilities, and private establishments, are excluded from contract construction and included in the employment for such establishments.

DURABLE GOODS - The durable goods subdivision includes the following major industry groups: ordnance and accessories; lumber and wood products (except furniture); furniture and fixtures; stone, clay, and glass products; primary metal industries; fabricated metal products (except ordnance, machinery, and transportation equipnent); machinery (except electrical); electrical machinery; transportation equipment; instruments and related products; and miscellaneous mamfacturing industries.

FINANCE, INSURANCE, AND REAL ESTATE - Covers establishnents operating in the fields of finance, insurance, and real estate, and beginning January 1952, also includes the Federal Reserve Banks and the mixed-ownership banks of the Farm Credit Administration for national estimates. However, in State and area estimates the latter two agencies will be included under Government until revisions are made in series prepared by cooperating State agencies.

GOVERNMENT - Covers Federal, State, and local government establishments performing legislative, executive, and judicial functions, including Government corporations, Government force-account construction, and such units as arsenals, navy yards, and hospitals. Fourth-class postmasters are included in the national series, but will be excluded fram State and area estimates pending revisions in series prepared by cooperating State agencies. State and local government employment excludes, as naninal employees, paid volunteer firemen and elected officials of small local units.

MANJFACTURING - Covers only private establishments. Government manufacturing operations such as arsenals and navy yards are excluded from manufacturing and included under Government.

MINING - Covers establishments engaged in the extraction from the earth of organic and inorganic minerals which occur in nature as solids, liquids, or gases; includes various contract services required in mining operations, such as removal of overburden, tunneling and shafting, and the drilling or acidizing of oil wells; also includes ore dressing, beneficiating, and concentration.

NOKDURABLE GOODS - The nondurable goods subdivision includes the following major industry groups: food and kindred products; tobacco manufactures; textile-mill products; apparel and other finished textile products; paper and allied products; printing, publishing, and allied industries; chemicals and allied products; products of petroleum and coal; rubber products; and leather and leather products. Labor turnover data exclude printing, publishing, and allied industries.

PAYROLL - Private payroll represent weekly payroll of both full- and parttime production and related workers who worked during, or received pay for, any part of the pay period ending nearest the l5th of the month, before deduction for old-age and unemployment insurance, group insurance, withholding tax, bonds, and union dues; also, includes pay for sick leave, holidays, and vacations taken. Excludes cash payments for vacations not taken, retroactive pay not earned during period reported, value of payments in kind, and bonuses, unless earned and paid regularly each pay period. The index in table A-4 represents production-worker average weekly payroll expressed as a percentage of average weekly payroll for the 1947-49 period. Aggregate weekly payroll for all manufacturing is derived by multiplying gross average weekly earnings by production-worker omployment.

PRODUCTION AND RELATED WORKERS - Includes working foremen and all nonsupervisory workers (including lead men and trainees) engaged in fabricating, processing, assembling, inspection, receiving, storage, handing, packing, warehousing, shipping, maintenance, repair, janitorial, watchmen services, products development, auxiliary production for plant's own use (e.g., power plant), and record-keeping and other services closely associated with the above production operations. The index in table A-4 represents the number of production and related workers in manufacturing expressed as a percentage of average monthly production-worker employment in the 1947-49 period.

SERV ICE AND MISCELLANROUS - Covers establishments primarily engaged in rendering services to individuals and business firms, including automotive repair services. Excludes domestic service workers.
