URBAN AND RURAL AREAS

SHOWING FOR THE UNITED STATES BY GEOGRAPHIC DIVISIONS AND
BY STATES THE URBAN-RURAL DISTRIBUTION OF DETAILED DATA
CONCERNING COLOR AND SIZE OF RELIEF FAMILIES, AND THE
AGE, COLOR, AND SEX OF PERSONS IN RELIEF FAMILIES; AND
PRESENTING MORE LIMITED RELIEF DATA BY COUNTIES AND CITIES

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON : 1934

LETTER OF TRANSMITTAL

FEDERAL EMERGENCY RELIEF ADMINISTRATION,
Washington, D.C., November 15, 1934.

SIR: I transmit herewith the second report covering the Unemployment Relief Census of October 1933. This report deals specifically with the urban-rural distribution, the data covering families and persons on relief during the month of October 1933. It contains, in addition, a table presenting summary relief statistics by counties and a similar table for each of the cities having a population of 25,000 or more in 1930.

The survey was conducted under the general supervision of Howard B. Myers, Assistant Director in charge of research. Charles F. Beach directed the field work and the tabulating of the basic material. Emerson Ross served in an advisory capacity. This report was drafted by Janet F. Nelson, Frederick F. Stephan, and Dorothy S. Thomas. The services of others not specifically mentioned are acknowledged with appreciation as well.

Respectfully,

CORRINGTON GILL,
Assistant Administrator
Division of Research, Statistics and Finance.

HON. HARRY L. HOPKINS,
Federal Emergency Relief Administrator.

PERCENTAGE OF POPULATION ON PUBLIC UNEMPLOYMENT RELIEF OCTOBER, 1933³³

MAP 1

UNEMPLOYMENT RELIEF CENSUS, OCTOBER 1933

INTRODUCTION

The number of persons receiving public unemployment relief in any month is affected by many conditions. The extent of unemployment, the possibility of seasonal and stop-gap employment, the availability of savings and other family resources, the amount of private relief, the policies and resources of public relief agencies, including those not specifically charged with unemployment relief, and many other factors influence the number of persons accepted as eligible for relief at any one time. These conditions vary among cities, among counties, and among States. Consequently different localities show varying proportions of their population on relief.

In order to secure a cross-section picture of the relief situation and to provide an accurate description of the relief population by age, sex, race, family size and composition for cities, counties, and States, an unemployment relief census was taken in October 1933 by the Federal Emergency Relief Administration and the several State and local relief administrations.

The collection of this simple but comprehensive information was undertaken as the first of a series of surveys designed to provide a basis of essential data for relief administration, program planning, and legislation. The principal results of the Unemployment Relief Census were released two months after the census began and were published as Report No. One in May 1934. The first report presented the number of families by size and race, and the number of persons by age, sex, and race, for geographic divisions, for States, and for cities having a population of 100,000 or more persons in 1930.

This, the second report, presents similar data for the rural and urban areas within geographic divisions and States. It also includes somewhat less detailed information for cities of 25,000 or more inhabitants and for all counties.

The data for rural and urban areas and for the smaller cities are shown in a form as far as possible comparable with the analysis in Report No. One. Each section in the first report has its counterpart (sometimes in an abbreviated form) in a section giving the urban-rural detail in the present report.

Most of the text tables and charts in the first report also have counterparts in the present report. Some omissions and substitutions have been made, however, because of the lack of significance of a detailed urban-rural breakdown on certain points. Thus the sections dealing with size of family and sex have been curtailed and several tables omitted. In presenting the data on location a percentage table is substituted for the comparable chart presented in the first report.

The Unemployment Relief Census was set up to include both resident family cases and resident individual cases (the latter are

commonly referred to as *one-person families* or as *nonfamily persons*) which were receiving public unemployment relief in October 1933. It omitted transients, recipients of other forms of relief, and persons who, although on the relief rolls, received no material relief during October.¹ The schedule and definitions used in the relief census are reproduced on pages 23 and 24.

SUMMARY

The urban relief population, like the total urban population, was highly concentrated. Six States included half the urban relief families. The rural relief families were almost as highly concentrated, half of them being located in nine States. While this concentration tended to follow the concentration of the total population, important differences were indicated by variations in the proportion of the total population that was receiving relief in October 1933. South Carolina had 26 percent of its urban population and Florida 27 percent of its rural population on relief, while Wyoming had 3 percent and 2 percent in urban and rural areas respectively.

The percentage of the urban Negro population receiving relief was three times that of the urban white population. However, the rural Negro and rural white populations showed almost the same percentages. Very largely as a result of the high urban Negro rate, the urban rate for all races combined exceeded the rural rate. This urban-rural comparison is affected by the fact that the relief census was taken in October in the harvesting and cotton picking season, which materially reduced the relief population in certain areas.

Urban relief cases included a higher proportion of nonfamily persons than did relief cases in rural areas.

Taking each age group in the general population, a higher percentage of all children and a lower percentage of aged persons were receiving relief than the intermediate age groups. This was more noticeable in urban than in rural areas.

There were proportionably more males among urban relief cases and proportionately more females among rural relief cases than were found in the corresponding groups of the general population.

LOCATION OF URBAN AND RURAL RELIEF FAMILIES

Three-fifths of the resident relief population in October 1933 was found living in cities or other incorporated places which had at least 2,500 inhabitants in 1930. Two-fifths of the relief population was rural in the sense that it did not live in incorporated places of this size. Of course, only a part of the rural relief population lived on farms.

The October 1933 urban relief population was highly concentrated. More than half of the urban families on relief were found in 6 States; New York, Pennsylvania, Illinois, Ohio, Michigan, and California, fully a third in the first 3 of these States, and more than an eighth in New York State alone.

The rural relief population was also concentrated in a few States. More than half of the rural families on relief were found in nine

¹ In Kentucky, however, some families were included who were not regular relief cases, but who received surplus commodities.

States; Pennsylvania, Kentucky, Oklahoma, Alabama, West Virginia, South Carolina, Michigan, Ohio, and Florida, and more than one-tenth in Pennsylvania alone. Charts 1a and 1b show the detailed urban-rural distribution of relief families by States, and table A gives the ratio percent of persons in these relief families to the urban and rural population of each State in 1930. It is apparent that much of the concentration of urban and rural relief cases merely reflected the concentration of urban or rural population in certain States. Thus, New York had almost 400 times as many urban relief families as Wyoming, but when the persons in relief families are expressed as ratios of the population in these States the proportionate urban relief in New York was found to be only three times as heavy as in Wyoming. Pennsylvania and Rhode Island represented the two extremes in numbers of rural relief families, the former having more than 200 times as many rural families on relief as the latter. Expressed as ratios of the population, twice as many persons were on the relief rolls in Pennsylvania as in Rhode Island. The greatest proportions of urban relief were found in South Carolina, Florida, and Arizona, each of which had approximately a quarter of the urban population on relief. Wyoming, on the other hand, had less than one-twentieth of its urban population on relief. The rural extremes were represented by Florida and West Virginia, each with approximately a quarter of the rural population on relief, and Virginia and Wyoming with less than one-fiftieth.

Thirty-nine of the forty-eight States had a relatively greater proportion of urban than of rural relief persons, and in only three States, Kentucky, West Virginia, and Oklahoma, were appreciably greater proportions of rural than of urban persons on relief.

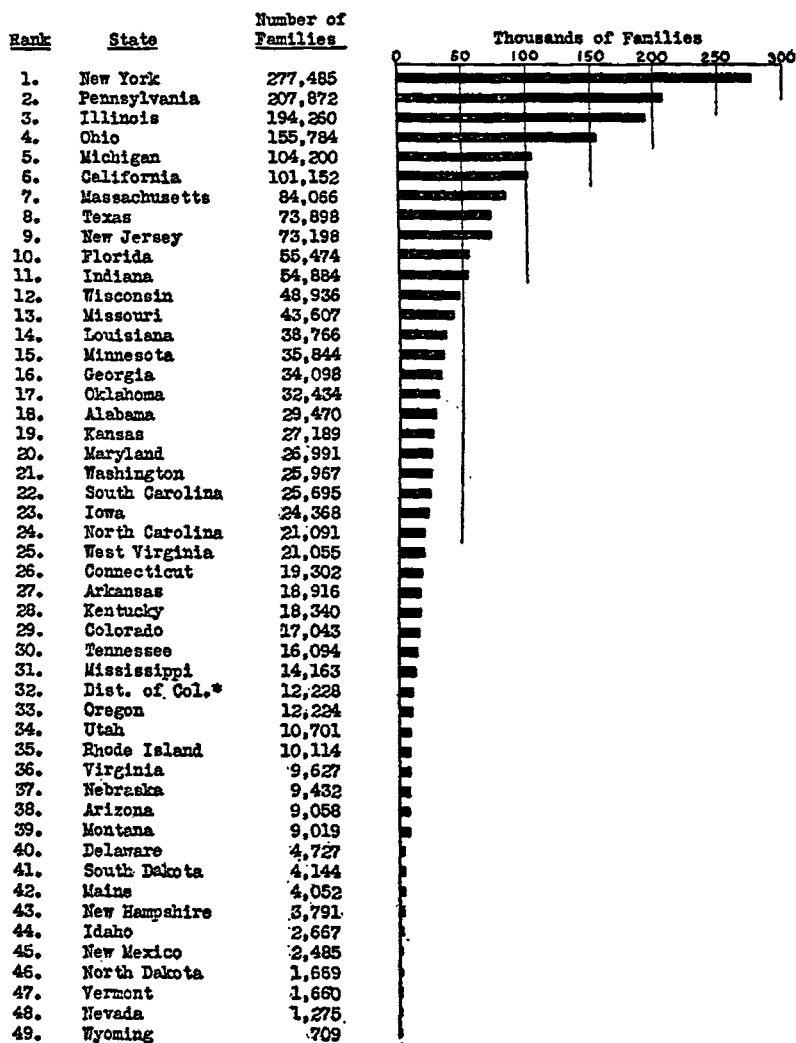

In table B, urban areas are divided into several groups by size of cities and the average relief ratios compared. The percentage on relief for these city groups ranged only from 10 to 12 percent with the groups of cities having 1,000,000 to 250,000, 250,000 to 100,000, and 100,000 to 50,000 population above the average for all urban areas, and the very largest cities (1,000,000 or more) and the very smallest (less than 50,000 population) below the average. The variation in ratios among the larger cities was discussed in Report No. One,¹ where the details were given for each of the 93 cities having a population of 100,000 or more.

Because of the population changes since 1930, the relief rates are not presented for individual cities with population of less than 100,000. The relief data for each of the cities are presented in table 10. By far the greater number of these cities had relief ratios ranging from 8 to 14 percent. At the extremes 19 cities had 3 percent or less on relief and 4 cities had 30 percent or more.

The map facing page 1 shows the relief percentages, in rather wide classes, for counties. It should be emphasized that the ratios for some counties are sufficiently affected by population changes since 1930 to introduce errors in the rates, even in the crude class intervals used in this map. The map is presented here to give a general picture of the probable high relief areas and to avoid the misleading implication of precision which a detailed table would suggest.

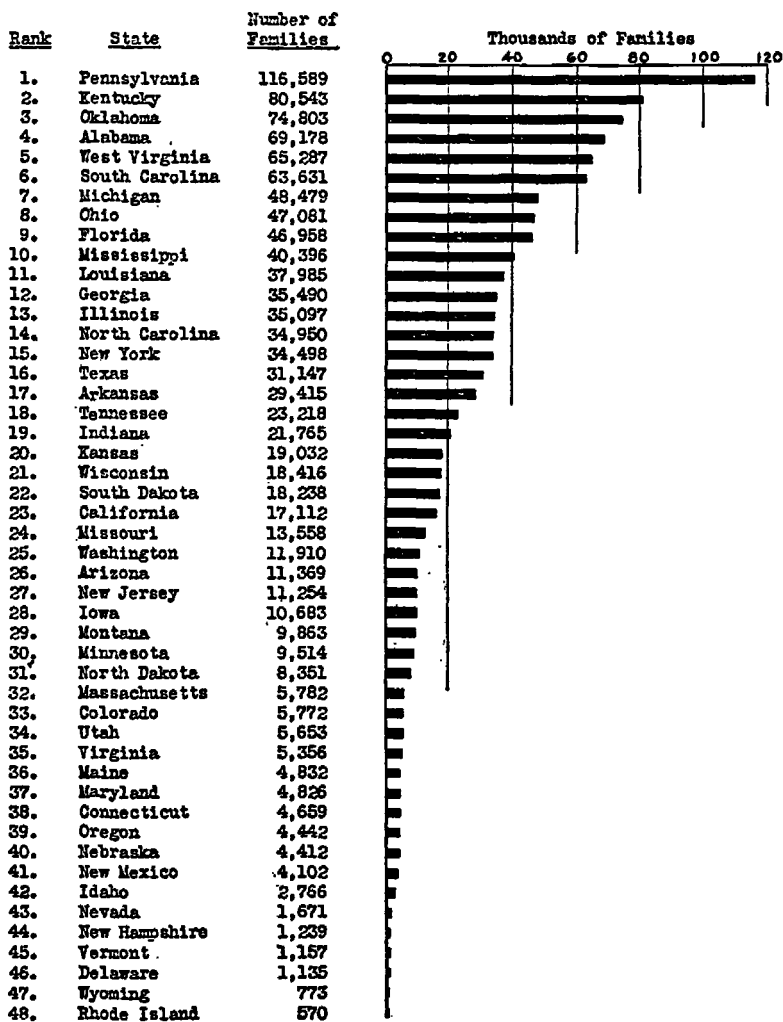

CHART 1a.—NUMBER OF FAMILIES IN URBAN AREAS RECEIVING PUBLIC UNEMPLOYMENT RELIEF, OCTOBER 1933, BY STATES AND THE DISTRICT OF COLUMBIA.

* All urban population.

FEDERAL EMERGENCY RELIEF ADMINISTRATION

CHART 1b.—NUMBER OF FAMILIES IN RURAL AREAS RECEIVING PUBLIC UNEMPLOYMENT RELIEF, OCTOBER 1933, BY STATES

FEDERAL EMERGENCY RELIEF ADMINISTRATION

COLOR OR RACE OF PERSONS IN URBAN AND RURAL RELIEF FAMILIES

Racial differences in the proportion of persons on relief were clearly marked in urban areas but existed to no appreciable extent in rural areas. (See chart 2.) In urban areas there was almost three times as large a proportion of Negroes as whites, and twice as large a proportion of "other races" as whites on relief. In contrast, the rural areas showed very slight differences in the proportions of the three racial relief groups. Due to uncertainty as to the nature of the shifts in population since 1930, the observed rural differences can scarcely be considered significant.

An analysis of 23 States, each of which had a total Negro population of 100,000 or more in 1930 (table C) brings to light some interesting contrasts. Ten of these States showed a disproportion of Negroes to whites in urban areas equal to or greater than the average for the country, the greatest disproportion occurring¹ in Missouri, New Jersey, and Ohio, each with approximately four times as great a percentage of Negroes as whites on relief. In none of these 23 States was there a greater proportion of urban whites than of urban Negroes on the relief rolls. Rural relief in 10 of these States served proportionately more whites than Negroes, but in 4 of them (New York, Illinois, Ohio, and New Jersey), there were three or more times as great a percentage of Negroes as whites on relief in rural areas and in two others (Pennsylvania and Michigan), more than twice as many.

Urban relief for other racial groups in six States (see table D) each of which had a total population of "other races" of 50,000 or more in 1930, showed considerable variation when compared with white urban relief in the same States. In Arizona and Colorado persons of "other races" were on relief proportionately four times as frequently in urban areas as whites, in contrast with Oklahoma and New Mexico where the proportions for "other races" were somewhat smaller than for whites. The rural portions of the two latter States had also lesser proportions of "other races" than of whites on relief, whereas the rural areas of the other four States showed relief proportionately greater for "other races" than whites.

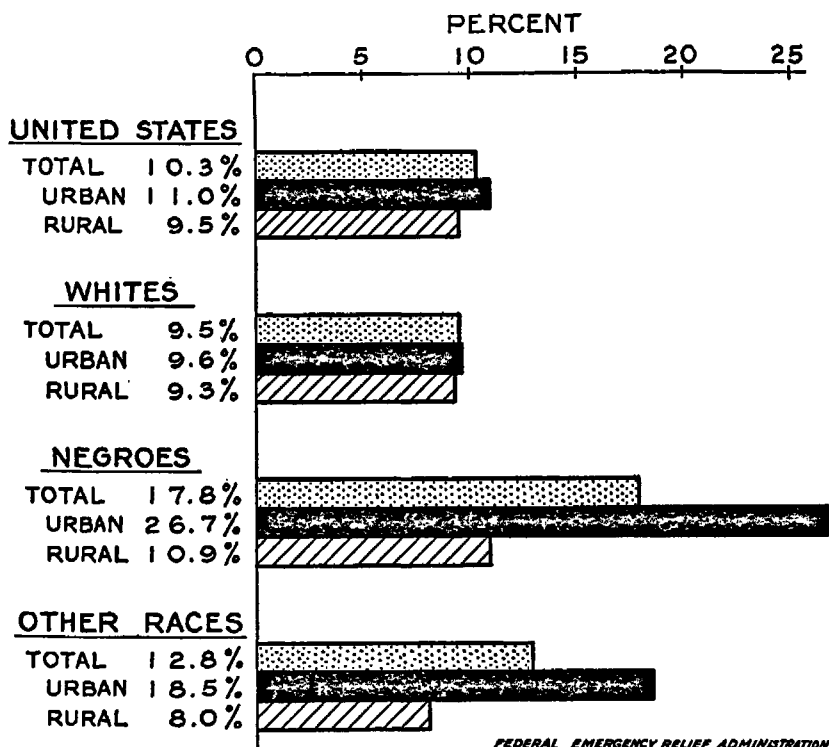

SIZE OF URBAN AND RURAL RELIEF FAMILIES

"One-person families" comprised 15 percent of the urban families in contrast with 10 percent of the rural families. (See table E.) The proportions of one-person families among white families were approximately the same as for all races combined. Among Negro families, however, there was less difference between urban and rural areas, 16 percent of all urban and 13 percent of all rural Negro families being comprised of only one person. Among "other races" the difference in proportion of one-person families between urban and rural areas is statistically insignificant.

Because of differences in the definition of "one-person family" in the relief census and the population census, detailed comparisons by size of family are not entirely reliable. An indication of the extent to which relief families differed from families in the general population is

¹ It was shown in Report No. One, p. 8, that the greatest disproportion between relief Negroes and relief whites was found in the District of Columbia, the population of which is entirely urban.

CHART 2.—PERCENTAGE OF WHITES, NEGROES AND OTHER RACES ON RELIEF OCTOBER 1933, IN URBAN AND RURAL AREAS. (PERCENTAGES ARE ESTIMATED ON THE BASIS OF THE TOTAL POPULATION AND POPULATION OF EACH RACIAL GROUP IN URBAN AND RURAL AREAS IN THE 1930 POPULATION CENSUS.)

given by a comparison of the group of families which had 2, 3, or 4 persons and the group of families which had 5 or more members. In both urban and rural areas, families of five or more persons were found in the relief population to an appreciably greater extent than families of these sizes were found in the general population in 1930. (See table F.) The difference was found predominately in the white families in both urban and rural areas and was much less for Negroes and "other races."

AGE OF PERSONS IN URBAN AND RURAL RELIEF FAMILIES

Children under 16 formed a decidedly larger proportion of the persons in the urban relief population in 1933 than of the total urban population in 1930 (40 and 28 percent, respectively). In rural relief families there was also an excess of children compared with their proportion in the total population although the differences were less marked than in urban areas.

The older age groups were fairly consistently underrepresented in relief families, and, generally speaking, the underrepresentation was more marked and consistent in urban than in rural areas. Table G gives the urban-rural detail by geographic divisions and States. The overrepresentation of children in urban areas was remarkably consistent in all nine geographic divisions, and in all except New England the rural areas showed a lesser degree of overrepresentation than urban. In North Dakota, New Mexico, Maine, and New Hampshire, almost half of the persons in urban relief families and in Maine, Vermont, and North Carolina well over half of the rural relief persons were children under 16. At the other extreme, in Nevada, Washington, Oregon, California, and Montana, less than 35 percent of the urban relief persons were children under 16, and in Nevada less than 30 percent of the rural relief persons were children under 16. Even these relatively low proportions, however, were well above the proportion of children in the population of these States in 1930.

In table H percentages of relief persons to persons of corresponding age and race groups in the total population are shown for urban and rural areas. For whites, differences between urban and rural relief proportions are evident in all age groups from 1 to 18, in each of which the urban proportion was slightly but significantly greater than the rural. For children under 1 year of age, however, and persons of all ages over 18, there are no significant differences between urban and rural relief percentages. For Negroes and "other races", the proportion of urban relief persons was from two to three times as great as the proportion of rural relief cases for every age group in the table (slightly less than twice as great for Negroes over 65). The greatest disproportion, however, occurred in the years up to 18.

In table I the relief proportion of older Negroes is compared with that of older whites for urban and rural areas in the 23 States with large Negro populations in 1930. Although over 20 percent of the older Negroes were on relief in rural areas in 10 of these States, the proportion in urban areas exceeded that in rural areas in every State, and was as much as five times as great in 2 States. The proportion of older relief whites, on the other hand, was somewhat greater in the urban than in the rural areas in only 12 of these States and the rural proportion was significantly higher than the urban in 9 States.

SEX OF PERSONS IN URBAN AND RURAL RELIEF FAMILIES

There was a slight excess of males in the urban relief families in 1933, although the urban population in 1930 had a slight excess of females. In rural areas there was an excess of males in both the relief families and the general population, but this excess was somewhat more marked in the general than in the relief population. Expressed as a rate, the ratio of males per 100 females was 101.4 in the urban relief families and 98.1 in the urban population. The rural ratios were 106.3 males per 100 females in the relief families and 108.3 males per 100 females in the general population. Table J shows the sex ratio for the total population in 1930 and for relief persons in urban and rural areas classified by racial groups. Whereas whites had an appreciable excess of males in urban areas among relief persons compared with the general population the sex ratio of Negroes on relief in both urban and rural areas differed but slightly from the comparable ratios in the Negro population. Among "other races", there were decidedly fewer males among relief persons in both urban and rural areas than would have been expected on the basis of their proportions in the general population.

LIMITATIONS OF THE DATA AND OF THE COMPARISONS

As indicated in Report No. One, the comparisons between the relief-census data for October 1933 and the census data for 1930 must be interpreted conservatively. In this report it was pointed out—

1. That more than three years had elapsed between the population enumeration and the relief census; that during this period the distribution and characteristics of the general population had undoubtedly changed.

2. That no estimate of the change in distribution and composition of the population during this period could be made with any degree of reliability although available evidence indicates that disturbances have occurred due to such factors as extensive internal migration during the depression, doubling up of families, and the falling birth rate.

3. That comparisons of size of family in the relief and population census must be made with great caution, not only for the above mentioned reasons but because of differences in definition in the two census enumerations.

4. That regional differences in relief load often reflect local differences in administration of relief, and relief percentages, therefore, must not be taken as indexes of the degree of economic or social distress either in localities or in specific classes of the population.

All of these limitations are applicable to the interpretation of urban-rural differences and certain of the comparisons between them are subject to further limitations.

There is considerable evidence that there have been losses of population in cities, and gains in rural areas due to internal migrations. These migrations would to some extent offset the relief rates, calculated in this report, in the direction of overstating rates for rural areas and understating rates for urban areas.

The interpretation of urban-rural differences is further limited by the census definition of *urban* and *rural*. This definition is in terms of size of population and does not take into consideration the difference between rural farm and rural nonfarm population.

A further serious limitation to comparisons between urban and rural areas may be attributed to the differing regional incidence of seasonal employment. For example, the fact that the relief census was taken during the cotton picking season undoubtedly reduced the number of Negroes who would otherwise have received relief in the rural areas of certain Southern States. Many other special and seasonal factors had an influence on differences between local areas at this time.

METHOD OF COLLECTING DATA

In general, the information secured by this census was not obtained by personal interview but was transcribed from the family case record cards which were on file in local relief offices and which had previously been filled out in connection with the investigation and social-service activities of the local relief agencies. The census data were, therefore, necessarily limited to facts appearing on these case cards. Before the schedule for the Unemployment Relief Census was constructed, the limits of these data were ascertained through correspondence and conferences with the State relief officials and further advice was obtained from research authorities in the fields of relief, statistics, and economics. A preliminary survey of the information readily available in local relief offices and the advice of competent authorities resulted in a decision to limit the data collected to four major categories, namely, the color and size of relief families and the sex and age of the persons in the families. It was then planned to assemble these basic data as a background for more intensive sample studies of the relief problem.

When the schedule was completed, a series of regional conferences was held throughout the country with the statisticians of the various State offices to assure the comparability of the results and the rapid completion of the work. The actual transcription of the information from the case cards to the schedules was done in local relief offices followed by a preliminary check in the State offices. The transcription was begun about November 1, 1933, and by the end of the month virtually all schedules had been filled out.

The schedule was designed to eliminate the necessity for practically all coding. But, to provide uniformity of procedure and interpretation, nine editing and coding offices were established at strategic points in the United States to serve as clearing houses for all schedules. The schedules were carefully edited and the few necessary items coded in these nine offices. The tabulations were made in Washington.

Urban population was defined in the relief census as the population residing in cities and other incorporated places having 2,500 inhabitants or more. The remainder was classified as rural. This definition accorded with that of the Census Bureau. "Family" was defined in the relief census as "a group of related or unrelated persons living together at one address who are receiving relief, and who are considered as one 'case' by the agency giving the relief." A one-person family was "any individual receiving relief, not included in a family or household as defined above." A family was considered resident if its head had been living in the State for 1 year or more. Transients (i. e., relief cases who had lived in the State for less than a year) were not included in the relief census.

The classification of "other races" includes such individual races as Mexican, Chinese, Japanese, Indian, Filipino, etc.

STATES INCLUDED IN THE VARIOUS GEOGRAPHIC DIVISIONS

The States included in the various geographic divisions are as follows:

New England:	South Atlantic—Continued
Maine	West Virginia
New Hampshire	North Carolina
Vermont	South Carolina
Massachusetts	Georgia
Rhode Island	Florida
Connecticut	East South Central:
Middle Atlantic:	Kentucky
New York	Tennessee
New Jersey	Alabama
Pennsylvania	Mississippi
East North Central:	West South Central:
Ohio	Arkansas
Indiana	Louisiana
Illinois	Oklahoma
Michigan	Texas
Wisconsin	Mountain:
West North Central:	Montana
Minnesota	Idaho
Iowa	Wyoming
Missouri	Colorado
North Dakota	New Mexico
South Dakota	Arizona
Nebraska	Utah
Kansas	Nevada
South Atlantic:	Pacific:
Delaware	Washington
Maryland	Oregon
District of Columbia	California
Virginia

Face of Schedule

F.E.R.A. Form DHB-1

FEDERAL EMERGENCY RELIEF ADMINISTRATION
HARRY L. HOPKINS, ADMINISTRATOR

UNEMPLOYMENT RELIEF CENSUS

OCTOBER 1933

This schedule is to be filled out in full for every unemployment relief case (family, household, or resident non-family person) receiving either work relief or direct relief or both from public funds (Federal, State, or local) during the month of October 1933. Do not fill out for transient cases, for cases receiving relief from private funds only, or for persons receiving widows' and orphans' pensions, mothers' aid, old-age relief, aid to the blind, or almshouse relief. Use a separate schedule for each family (household), and for each resident non-family person.

READ CAREFULLY THE DEFINITIONS PRINTED ON THE BACK OF THIS SCHEDULE

1. Name of the agency giving relief to the case.....

2. Full name and street address of head of family, or of resident non-family person:

Name..... Address.....
(If an identification number is used by the agency to identify each case, the case number may be used instead of name, and address may be omitted.)

3. Place of residence of family, or of non-family person:

(a) State..... (b) County.....

(c) Location within county (make entry for one of the following):

(1) If living within limits of any city, village, or other incorporated place, enter name of such place below:

(2) If not living within limits of any city, village, or other incorporated place, check (✓) here ☐

4. Color of head of family, or of non-family person (check (✓) one of the following):

1. White ☐	3. Mexican ☐	5. Japanese ☐	7. Filipino ☐
2. Negro ☐	4. Chinese ☐	6. Indian ☐	8. Other..... (Specify)

5. Relationship, sex, and age of each person in family, or of resident non-family person, who received relief during October 1933. (Enter the head of the family on line 1, followed by the other members, such as "wife", "son", "grand-daughter", etc. In the event that the relationship cannot be determined, enter the first name of the person. Leave no unused lines between names. If the schedule is filled out for a non-family person, enter first name on line 1. Use a separate schedule for each family and for each resident non-family person.)

RELATIONSHIP TO HEAD OF FAMILY (If not available, give first name of person)	SEX (M. or F.)	MALES Age in years (for child under 1 year enter "0")	FEMALES Age in years (for child under 1 year enter "0")	MAKE NO ENTRIES IN THESE COLUMNS		
				AGE GROUP	NUMBER OF MALES	NUMBER OF FEMALES
1				Under 1 year.....		
2				1 through 5 years.....		
3				6 through 13 years.....		
4				14 and 15 years.....		
5				16 and 17 years.....		
6				18 through 24 years.....		
7				25 through 34 years.....		
8				35 through 44 years.....		
9				45 through 54 years.....		
10				55 through 64 years.....		
11				65 years and over.....

(Signature or initials of person filling out schedule)

AT THE END OF EACH DAY FORWARD ALL COMPLETED SCHEDULES TO OFFICE DESIGNATED BY YOUR STATE RELIEF ADMINISTRATOR

Back of Schedule

THE UNEMPLOYMENT RELIEF CENSUS

This census is designed to provide information which is essential to the proper administration of relief during the coming year. It is of the utmost importance that all information called for be entered completely and accurately. Information regarding individual families or persons will be held strictly confidential.

DEFINITIONS

Family or household.—A family or household is a group of related or unrelated persons living together at one address, who are receiving relief and who are considered as one "case" by the agency giving the relief.

Resident nonfamily person.—A resident nonfamily person is any individual receiving relief, not included in a family or household as defined above, who has lived in the State for 1 year or more.

Transient case.—A transient case is a nonfamily person or a family that has lived in the State for less than 1 year. Do *not* fill out a schedule for transient cases.
