

STATISTICAL Supplement

March 1944

THIS STATISTICAL SUPPLEMENT

to the **FEDERAL HOME LOAN BANK REVIEW** is designed to bring together, in convenient form, a vast quantity of pertinent reference material bearing upon residential construction and home-financing activities.

The Supplement provides statistical information covering approximately a 10-year period, including all revisions made up to the beginning of the current year. Indexes are presented on a base of $1935-1939=100$, to facilitate comparisons. Space is provided in most instances for inserting 1944 data as they become available in regular tables of the REVIEW.

The presentation of this Supplement would not have been possible without the full cooperation of the Division of Operating Statistics of the Federal Home Loan Bank Administration; the Bureau of Labor Statistics in the U. S. Department of Labor; and the Division of Research and Statistics of the Federal Housing Administration. Their contribution is sincerely appreciated.

Explanatory notes on page 3 give a description of the source, coverage, method of computation, and application of the statistical series included on the following pages.

TABLE OF CONTENTS

Explanatory notes.....	3
Table 1.—Indexes of residential construction and selected influencing factors (1933-1943):	
Residential construction.....	5
Nonfarm foreclosures.....	5
Rental index.....	5
Industrial production.....	5
Manufacturing employment.....	5
National income payments.....	6
Wholesale building-material prices.....	6
Wholesale lumber prices.....	6
Savings and loan mortgage lending.....	6
Table 2.—Nonfarm real-estate foreclosures in the U. S., 1933-1943.....	6
Table 3.—Outstanding mortgage loans on 1- to 4-family nonfarm homes, 1932-1942.....	7
Table 4.—Private savings in selected financial institutions 1940-1943.....	7
Table 5.—Sales of U. S. war savings bonds 1941-1943.....	7
Table 6.—Indexes of building costs for the standard 6-room frame house, 1939-1943.....	7
Table 7.—Indexes of building costs for the standard house in representative cities, 1939-1943.....	8-9
Table 8.—New residential construction in all urban areas, 1939-1943, by FHLB District and State.....	10
Table 9.—New private 1- and 2-family dwellings provided in all urban areas, 1939-1943, by FHLB District and State.....	11
Table 10.—New residential construction in all urban areas during 1942-1943, by months, and by FHLB District and State.....	12-13
Table 11.—New residential construction in all urban areas of the U. S., 1932-1943.....	14
Table 12.—New residential construction in all urban areas of the U. S., 1942-1943, by months.....	14
Table 13.—New residential construction in all nonfarm areas of the U. S., 1932-1943.....	14
Table 14.—New home-mortgage loans by all savings and loan associations, by purpose and class of as- sociation, 1939-1943.....	15
Table 15.—New home-mortgage loans by all savings and loan associations, by FHLB District and class of association, 1939-1943.....	16-19
Table 16.—Nonfarm mortgages recorded by type of mortgagee, 1940-1943.....	20
Table 17.—Nonfarm mortgages recorded by FHLB District and State, and by type of mortgagee, 1940-1943.....	21-23
Table 18.—Summary of FHLB advances for the U. S., by months, 1935-1943.....	24
Table 19.—Balance of advances outstanding for each Federal Home Loan Bank, by months, 1935- 1943.....	24-25
Table 20.—Progress of institutions insured by the Federal Savings and Loan Insurance Corporation, by quarters, 1940-1943.....	26
Table 21.—Progress of membership in the Federal Home Loan Bank System, 1934-1943.....	27
Table 22.—Home mortgages insured by the Federal Housing Administration, 1937-1943.....	27
Table 23.—FHA insured home mortgages held, by class of institution, 1937-1943.....	27

Explanatory Notes

Page 5

RESIDENTIAL CONSTRUCTION: Compiled by the *Division of Operating Statistics, FHLBA*, from building permits reported to the U. S. Department of Labor, based on estimates of the number of 1- and 2-family, privately financed dwelling units provided in all urban areas. The index data, adjusted for normal seasonal fluctuations, reveal essential movements in the volume of new housing facilities currently provided.

NONFARM FORECLOSURES: Compiled by the *Division of Operating Statistics, FHLBA*. This index, adjusted for normal seasonal variations, is based on data reported monthly from approximately 1,800 counties, cities, townships, or other governmental divisions and measures the number of properties acquired monthly through foreclosures. Approximately 75 percent of all nonfarm dwellings are included in this sample. Although non-residential and multi-family foreclosures comprise about 15 percent of the totals used, this index is a gauge of the ability of home owners to meet obligations.

RENTAL INDEX: Compiled by the *Bureau of Labor Statistics*, based on rent data collected for all types of dwellings occupied by wage earners and lower-salaried workers in 34 large cities. This series is part of the comprehensive cost-of-living data recorded by the BLS. For more complete information see the *Monthly Labor Review*, August 1940, pp. 367-404.

INDUSTRIAL PRODUCTION: Compiled by the *Division of Research and Statistics, Board of Governors of the Federal Reserve System*. This seasonally adjusted index was completely revised in October 1943 and a detailed description is included in the *Federal Reserve Bulletin* for that month. The index is an over-all measure of changes in the physical volume of production of manufactures and minerals; it does not cover other types of goods and services nor reflect changes in prices. It is derived from 100 individual series—16 groups of manufacturing industries and two groups of mining industries.

MANUFACTURING EMPLOYMENT: Compiled by the *Bureau of Labor Statistics* on the basis of 1939=100, converted and adjusted for seasonal variations by the Division of Operating Statistics, FHLBA. The basis of this index was revised by the BLS in February 1943. (See *Monthly Labor Review*, January 1944, p. 214, and February 1944, p. 440.) A further break-down between employment in durable and nondurable goods industries is available from the BLS.

Page 6

NATIONAL INCOME PAYMENTS: Compiled by the *Bureau of Foreign and Domestic Commerce* and adjusted for seasonal variations. This series was revised in August 1943. (See *Survey of Current Business* for that month, p. S-1.) It is made up of estimates of the income received from salaries and wages, direct or other relief payments, social security

¹ All indexes are on the basis of 1935-1939=100.

benefits and other labor income, entrepreneurial income and net rents and royalties. The index is useful primarily in indicating the changes in the dollar volume of income payments. However, because it does not reflect changes in the basic price levels, it does not measure the purchasing power of a given income.

WHOLESALE BUILDING-MATERIAL PRICES: Compiled by the *Bureau of Labor Statistics* on an original base of 1926=100, converted by the Division of Operating Statistics, FHLBA. It is one of the 10 major classifications included in the weekly price series based on 889 commodities, prepared by the BLS. Wholesale delivery prices are obtained weekly for these items in 48 selected cities and a monthly average is computed from these figures. The composite building-material index does not pertain strictly to home building but provides the best available guide to the fluctuations in wholesale prices of materials which loom large in the construction of residential structures.

WHOLESALE LUMBER PRICES: Compiled by the *Bureau of Labor Statistics* on an original base of 1926=100, converted by the Division of Operating Statistics, FHLBA. This index is one of the component parts of the wholesale building-material price index mentioned above. In all, 44 different lumber items are included in this new series (revised in 1940). Because of the important bearing of the lumber factor upon the total cost of the typical single-family home, price fluctuations evidenced in this series are of particular significance to home-financing institutions.

SAVINGS AND LOAN MORTGAGE LENDING: Compiled by the *Division of Operating Statistics, FHLBA*, from monthly reports of cooperating savings and loan associations. For complete description of source see the note on savings and loan mortgage-lending statistics on page 4. The index, adjusted for seasonal variations and computed from data on the total loans made by all savings and loan associations, is an important yardstick in measuring the activity of these institutions against influencing factors in the real-estate and home-financing fields.

NOTE—Current data for each of the foregoing indexes may be found in the Monthly Survey section of the REVIEW.

NONFARM FORECLOSURES: Compiled by the *Division of Operating Statistics, FHLBA*. These statistics represent the estimated number of foreclosures in the United States in all nonfarm areas, and are based on data reported monthly from approximately 1,800 counties, cities, townships, or other political divisions. About 75 percent of all nonfarm dwellings are located in the areas included in this sample. (See REVIEW, Table 10).

Page 7

NONFARM HOME-MORTGAGE DEBT: Compiled by the *Division of Operating Statistics, FHLBA*, from special studies and reported statistics of various types of mortgage-lending institutions. The data are confined to loans on 1- to 4-family homes in order to eliminate mortgages on farm or commercial

properties. Estimates for 1943 will not be available until about September 1944. For a complete description of the sources and methods used in arriving at the total mortgages held by each type of lender, see REVIEW, November 1939, p. 51.

PRIVATE SAVINGS: Compiled by the FHLBA from monthly reports of insured savings and loan associations (private repurchasable share capital invested); Postal Savings Division of the U. S. Post Office Department (balance on deposit to credit of depositors); semi-annual surveys of the Federal Deposit Insurance Corporation (amount of time deposits evidenced by savings passbooks, estimated since December 1942); and semi-annual surveys by the National Association of Mutual Savings Banks (reported deposits). (See REVIEW, Table 14).

WAR BOND SALES: Compiled by the FHLBA from official reports of the U. S. Treasury, War Savings Staff. Prior to May 1941, Series E figures were based on cash sales of U. S. Savings Bonds ("baby bonds"), also designed to fit the needs of savers with limited incomes. (See REVIEW, Table 13).

COST OF THE STANDARD HOUSE: Compiled by the *Division of Operating Statistics, FHLBA*. This index is a 3-month moving average of cost estimates for approximately 80 different cities reporting in 3-month intervals. The various units of materials and labor are selected to conform with their contribution to the total cost of the completed dwelling.

In figuring costs, current prices on the same building-materials lists are obtained every 3 months from the same dealers and current wage rates are obtained from the same contractors and operative builders by HOLC field personnel. The Bureau of Labor Statistics furnishes current prices on building materials for some cities. Although shortages of materials and priority restrictions preclude the actual construction of this house under wartime conditions, tests indicate that the indexes measure fairly closely the cost changes for smaller frame structures that now can be built.

The index reflects the changes in material and labor costs. Allowances for overhead and profit, which were previously included in total costs, were based on a flat percentage of the material and labor costs and therefore did not affect the movements of the series; no such allowances are included now that the index is expressed in relative terms only.

A detailed description of the index and specifications for the standard house appeared in the REVIEW, January and February 1936, and a limited number of reprints of these articles are available on request. The following notes on tables appearing on pages 8 and 9 are also applicable to this table. (See REVIEW, Table 4).

COST OF BUILDING THE SAME STANDARD HOUSE IN SELECTED CITIES: Compiled by the *Division of Operating Statistics, FHLBA*. These data are the basic material for the computation of the small-house building cost index, and are preserved in view of the influence exercised by construction costs on the volume of home building and on the value of existing security for mortgages.

Cities in FHLB Districts II, VI, VIII, and XI report in January, April, July, and October of each year; those in

regions III, V, IX, and XII report in February, May, August, and November; and those in Districts I, IV, VII, and X report in March, June, September, and December.

DESCRIPTION OF HOUSE

The house on which costs are reported is a detached 6-room home of 24,000 cubic feet volume. Living room, dining room, kitchen, and lavatory on first floor; three bedrooms and bath on second floor. It is *not* completed ready for occupancy. It includes *only* fundamental structural elements—an attached 1-car garage, unfinished cellar, unfinished attic, fireplace, essential heating, plumbing, and electric wiring facilities, and complete insulation.

Reported costs do *not* include the cost of land or surveying, landscaping, walks and driveways, nor architect's fee, cost of the building permit, financing charges, nor sales costs. (See REVIEW, September 1939, p. 383).

The indexes provide a basis for the study of the *trend of costs* within an individual reporting community or a comparison of the trends in different cities and Bank Districts. (See REVIEW, Table 3).

Pages 10, 11, 12, 13, and 14

RESIDENTIAL CONSTRUCTION: Compiled by the *Bureau of Labor Statistics*, from building permits received from more than 2,000 cities and towns. Calculations since 1940 are based on the population figures of the 1940 Census. Figures for 1939 and prior years are based on the 1930 Census.

Page 10: This table presents, by States and FHLB Districts, the annual estimates of the number and cost of *all* new residential construction for which building permits were issued in all urban areas of the United States.

Page 11: To bring the residential construction statistics closer to the actual operations of savings and loan associations, this table analyzes the number and cost of *privately constructed* 1- and 2-family dwellings—the type accepted as security for the vast majority of their mortgage loans.

Pages 12 and 13: To facilitate the comparison of 1944 building with previous years, this table presents the estimated number of dwelling units built in all urban communities (2,500 or more population) during each month of 1942 and 1943 and provides space to insert similar data for the current year. (See REVIEW, Table 1).

Page 14: The tables on this page include summaries of new residential-construction volume and give some indication of the proportion of building which is undertaken in urban and nonfarm areas. Tables 11 and 12 are summaries of all construction in urban areas of the United States, by type of construction and source of finance. Estimates for years prior to 1936, made by the National Bureau of Economic Research, were published in the *Monthly Labor Review*, January 1938. (See REVIEW, Table 2).

Table 13 is a summary of total *nonfarm* residential construction.

Pages 15, 16, 17, 18, and 19

SAVINGS AND LOAN MORTGAGE-LENDING STATISTICS: Compiled by the *Division of Operating Statistics, FHLBA*, from the monthly reports of cooperating savings and loan

(Continued on p. 28)

Explanatory Notes

(Continued from p. 4)

associations. Approximately 3,000 Federal, State-member, and nonmember associations whose assets represent about 74 percent of the total assets of all savings and loan associations are included in the sample of institutions upon which the final estimates are based.

Table 14 shows a breakdown of the total loans by purpose and by class of association originating the loans. The percent distribution indicates the relation of that purpose or class to the aggregate loans for the year.

Table 15 shows volume of loans by FHL Bank Districts. (See REVIEW, Tables 6 and 7.)

Pages 20, 21, 22, and 23

MORTGAGE-RECORDING DATA: Compiled by the *Division of Operating Statistics, FHLBA*, from monthly reports prepared by cooperating institutions. The coverage on which final estimates are based includes approximately 600 areas which contain almost two-thirds of the total nonfarm population.

Since almost every mortgage is recorded, this index provides an adequate appraisal of the role being played by various types of lenders. To relate mortgage recording to the financing of 1- to 4-family homes, only mortgages of \$20,000 or less on properties in nonfarm areas are counted.

It must be pointed out, however, that mortgage-recording data are not directly comparable with the estimates on home-mortgage lending presented in Tables 14 and 15. The periods covered are not necessarily the same. Lending statistics are reported as of the date of loan commitment, while recording figures reflect the actual date of mortgage registrations. Further, alterations in the terms of an existing contract may necessitate a new registration. In the case of refinancing an institution's own mortgage, for example, the face amount of the instrument would appear in the recording totals whereas only that portion which represented an increase of funds loaned would be included in the monthly lending figures.

Table 16 shows the estimated amount of mortgages recorded throughout the United States by each type of lender in each month since January 1940. It also shows the relationship of the business done by each type of mortgagee to the total volume of business for any given month as well as by the annual total. (See REVIEW, Table 9.)

Table 17 provides a detailed summary of the annual recordings made by each type of mortgagee from 1940 through 1943, broken down by FHLB Districts and by individual States. The percentage figures relate to the share of the total mortgage-recording business in a given area. (See REVIEW, Table 8.)

Pages 24 and 25

FEDERAL HOME LOAN BANK ADVANCES: Compiled by the *Bank Operations Section, FHLBA*. The ability of the FHLB System to serve as a credit reservoir for its member institutions is best demonstrated by the volume of Federal Home Loan Bank advances since the inception of the System in 1932. Table 18 shows, by months, the amount of new

advances made, repayments on old balances, and advances still outstanding at the end of the period.

Table 19 indicates the balance outstanding at the end of each month for each of the 12 regional FHL Banks. (See REVIEW, Table 12.)

Page 26

PROGRESS OF INSURED ASSOCIATIONS: Compiled by the *Division of Operating Statistics, FHLBA*, from the monthly reports required of all institutions insured by the Federal Savings and Loan Insurance Corporation. The selected balance-sheet items presented are as of the end of the reporting period. Data on operations represent the monthly total of new mortgage loans made, and the total amount of new private investments and repurchases. The repurchase ratio is obtained by dividing the repurchases for the month by the total new investments received and it would be possible, therefore, for this figure to exceed 100 percent if there was a net decline in share capital. The resulting ratio measures the flow of capital into and out of insured associations. (See REVIEW, Table 15.)

Page 27

FEDERAL HOME LOAN BANK SYSTEM: Compiled by the *Division of Operating Statistics, FHLBA*. This table, showing the number and assets of all member institutions of the FHLB System, is based on the annual reports submitted by members, and is broken down into the various types of institutions. Quarterly figures are estimated. (See REVIEW, Table 18.)

INSURED MORTGAGE OPERATIONS: Compiled by the *Division of Research and Statistics, Federal Housing Administration*. This table shows the number of mortgages which became premium-paying (i. e., actually in effect) from 1937 through 1943. The various Titles indicate the part of the National Housing Act under which they were processed. Not all Titles have been in effect during the entire period. All data are for mortgages on 1- to 4-family houses. Figures represent the gross insurance written during the period and do not take account of principal repayments on previously insured loans. Title I, Class 3, and Title VI loans are all on newly constructed homes. Title II loans may be either on new or existing dwellings. The minus sign in Title I, Class 3 indicates adjustments reported in previous months. (See REVIEW, Table 11.)

INSURED MORTGAGE HOLDINGS: Compiled by the *Division of Research and Statistics, Federal Housing Administration*. Based on the original face amount of instruments, this table shows the insured mortgages held by the various classes of institutions. Figures do not include terminated mortgages or cases in transit to or being audited by the FHA. They include only the mortgages on 1- to 4-family homes insured under Titles II and VI. The Federal agency classification includes the RFC Mortgage Company, Federal National Mortgage Association, and the U. S. Housing Corporation. The "other" classification includes mortgage companies, finance companies, endowed institutions, private and State benefit funds, etc. December 1943 figures were not available in time for inclusion in the Supplement. They will be found in the September 1944 issue of the REVIEW, Table 19-A, which is carried semi-annually.
