

THIS STATISTICAL SUPPLEMENT

to the FEDERAL HOME LOAN BANK REVIEW is designed to bring together, in convenient form, a vast quantity of pertinent reference material bearing upon residential construction and home financing activities.

The Supplement provides statistical information covering approximately a 10-year period, including all revisions made up to the beginning of the current year. Indexes are presented on a base of 1935-1939=100, to facilitate comparisons. Space is provided in most instances for inserting 1946 data as they become available in regular tables of the REVIEW.

The presentation of this Supplement would not have been possible without the full cooperation of the Division of Operating Statistics of the Federal Home Loan Bank Administration; the Bureau of Labor Statistics in the U. S. Department of Labor; the Housing Market Service, National Housing Agency; and the Division of Research and Statistics of the Federal Housing Administration. Their contribution is sincerely appreciated.

Explanatory notes on page 2 give a description of the source, coverage, method of computation and application of the statistical series included on the following pages.

TABLE OF CONTENTS

Table 3.—Outstanding mortgage loans on 1- to 4-family nonfarm homes, 1934–1944-----	7
Table 4.—New mortgage loans on 1- to 4-family nonfarm homes, 1934–1944-----	7
Table 5.—Residential real estate owned by selected institutions, 1939–1944-----	7
Table 6.—Indexes of building costs for the standard frame house, 1940–1945-----	7
Table 7.—Indexes of building costs for the standard frame house in representative cities, 1936–1945-----	8–9
Table 8.—New residential construction in all nonfarm areas, 1940–1944, by FHLB District and state-----	10
Table 9.—New residential construction in all nonfarm areas, by type of structure and source of funds, 1945-----	11
Table 10.—New residential construction in all nonfarm areas of the U. S., by months, 1944–1945-----	12
Table 11.—New residential construction in all <i>nonfarm</i> areas of the U. S., 1934–1945-----	12
Table 12.—New residential construction in all <i>urban</i> areas of the U. S., 1934–1945-----	12
Table 13.—Estimated volume of new mortgage loans by all savings and loan associations, by purpose and class of association, 1941–1945-----	13
Table 14.—Estimated volume of new mortgage loans by all savings and loan associations, by FHLB District and type of loan, 1943–1945-----	14–17
Table 15.—Estimated volume of new mortgage loans made by all insured associations, by FHLB District and state, 1943–1945-----	18
Table 16.—Nonfarm mortgages of \$20,000 or less recorded, by FHLB District and state and by type of mortgagee, 1942–1945-----	19–21
Table 17.—Nonfarm mortgages of \$20,000 and under recorded by type of mortgagee, 1939–1945-----	22
Table 18.—FHLB advances for the U. S., by months, 1937–1945-----	23
Table 19.—Principal assets and liabilities of all FHL Banks, 1941–1945-----	23
Table 20.—Membership in the FHLB System, by states, December 31, 1945-----	24
Table 21.—Progress of membership in the FHLB System, 1935–1945-----	25
Table 22.—Selected statistics for all operating savings and loan associations, by years, 1922–1944-----	25
Table 23.—Progress of institutions insured by the FSLIC, 1942–1945-----	26
Table 24.—Summary of war housing construction, 1940–1945-----	27
Table 25.—Home mortgages insured by the FHA, 1938–1945-----	27
Table 26.—FHA insured home mortgages held, by class of institution, 1939–1945-----	27

Explanatory Notes¹

Page 5

RESIDENTIAL CONSTRUCTION: Compiled by the *Division of Operating Statistics, FHLBA*, from building permits reported to the U. S. Department of Labor, based on estimates of the number of 1- and 2-family, privately financed dwelling units provided in all urban areas. The index data, adjusted for normal seasonal fluctuations, reveal essential movements in the volume of housing facilities.

NONFARM FORECLOSURES: Compiled by the *Division of Operating Statistics, FHLBA*. This index, adjusted for normal seasonal variations, is based on data reported monthly from approximately 1,900 counties, cities, townships, or other governmental divisions and measures the number of properties acquired monthly through foreclosures. Approximately 80 percent of all nonfarm dwellings are included. Although non-residential and multi-family foreclosures comprise about 15 percent of the totals used, this index is a gauge of the ability of home owners to meet obligations.

SAVINGS AND LOAN MORTGAGE LENDING: Compiled by the *Division of Operating Statistics, FHLBA*, from monthly reports of cooperating savings and loan associations. For complete description of source see the note on savings and loan mortgage lending statistics on page 3. The index, adjusted for seasonal variations and computed from data on the total loans made by all associations, is an important yardstick in measuring the activity of these institutions against influencing factors in the real estate and home financing fields.

WHOLESALE BUILDING MATERIAL PRICES: Compiled by the *Bureau of Labor Statistics* on an original base of 1926=100, converted by the Division of Operating Statistics, FHLBA. It is one of the 10 major classifications included in the weekly price series based on 889 commodities, prepared by the BLS. The composite building material index does not pertain strictly to home building but provides the best available guide to the fluctuations in wholesale prices of materials which loom large in the construction of residential structures.

WHOLESALE LUMBER PRICES: Compiled by the *Bureau of Labor Statistics* on an original base of 1926=100, converted by the Division of Operating Statistics, FHLBA. This index is one of the components of the wholesale building material price index. In all, about 45 different lumber items are included. Because of the important bearing of the lumber factor on the total cost of the typical single-family home, price fluctuations shown in this series are of particular significance to home financing institutions.

Page 6

INDUSTRIAL PRODUCTION: Compiled by the *Division of Research and Statistics, Board of Governors of the Federal Reserve System*. The index is an over-all measure of change

¹ All indexes are on the basis of 1935-1939=100.

in the physical volume of production of manufactures and minerals; it does *not* cover other types of goods and services nor reflect changes in prices. It is derived from 100 individual series—16 groups of manufacturing industries and two groups of mining industries.

MANUFACTURING EMPLOYMENT: Compiled by the *Bureau of Labor Statistics* on the basis of 1939=100, converted and adjusted for seasonal variations by the Division of Operating Statistics, FHLBA. A further breakdown between employment in durable and nondurable goods industries is available from the BLS.

NATIONAL INCOME PAYMENTS: Compiled by the *Bureau of Foreign and Domestic Commerce* and adjusted for seasonal variations. This index is based on estimates of income received by individuals from salaries and wages, dividends and interest, direct or other relief payments, social security benefits and other labor income, entrepreneurial income and net rents and royalties. The index is useful primarily in indicating the changes in the dollar volume of income payments. Because it does not reflect changes in the basic price levels, this index does *not* provide a measure of the purchasing power of a given income.

CONSUMERS' PRICES: Compiled by the *Bureau of Labor Statistics*, based on time-to-time changes in the cost of goods and services purchased by wage earners and low-salaried workers in large cities. Food prices are collected in 56 cities, and data on rentals and prices of clothing, house furnishings and miscellaneous goods and services are obtained in 34 cities. This index was formerly called the cost-of-living index.

NOTE—Current data for most of the foregoing indexes may be found in the Monthly Survey section of the REVIEW.

NONFARM FORECLOSURES: Compiled by the *Division of Operating Statistics, FHLBA*. These statistics represent the estimated number of foreclosures in the United States in all nonfarm areas, and are based on the same data used in the foreclosure index explained above. (See REVIEW, Table 15—quarterly from February.)

Pages 7, 8 and 9

NONFARM HOME MORTGAGE DEBT: Compiled by the *Division of Operating Statistics, FHLBA*, from special studies and reported statistics of various types of mortgage lending institutions. Data are confined to loans on 1- to 4-family homes in order to eliminate mortgages on farm or commercial properties. Estimates for 1945 will not be available until about August 1946. For a complete description of the sources and methods used in arriving at the total mortgages held by each type of lender, see REVIEW, November 1939, p. 51.

NONFARM HOME MORTGAGE LENDING: Compiled by the *Division of Operating Statistics, FHLBA*. Based on mortgages recorded throughout the country by type of mortgagee, and special studies and reported statistics of various types of mortgage lending institutions. Data are

confined to loans on 1- to 4-family homes and do not include mortgage loans made on farm or commercial properties. The category "individuals and others" includes fiduciaries, real estate and bond companies, title and mortgage companies, philanthropic and educational institutions, fraternal organizations, construction companies, RFC Mortgage Company, etc.

RESIDENTIAL REAL ESTATE OWNED BY SELECTED INSTITUTIONS: Compiled by the *Division of Operating Statistics, FHLBA*. Based on annual reports of savings and loan members of the FHLB System; statistics of reporting life insurance companies holding about 95 percent of all life insurance company resources; reports of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Home Owners' Loan Corporation and state supervisory authorities. Estimates for life insurance companies exclude housing projects built by these companies for investment.

INDEX OF BUILDING COSTS FOR THE STANDARD HOUSE: Compiled by the *Division of Operating Statistics, FHLBA*. This index is designed to measure the changes in the cost of constructing a standard frame house and to provide a basis for studying the trend of costs within an individual community or in different cities. The method of calculating the index and many of the index numbers have recently been revised to accommodate new sources of basic data, and to recognize insofar as possible the stringency of current market conditions.

The index now reflects price changes in a limited bill of the more important items, and in wage variations in the major housebuilding trades. Items in the abridged group were selected from the original bill of specifications which listed the construction materials and number of work hours required of the various types of building craftsmen and helpers to construct the hypothetical six-room house. Continuity of the series is maintained by weighting the selected units of material and labor in accordance with their contribution to the total cost of the completed dwelling. The index does not attempt to evaluate some important factors which influence cost trends, such as variations in labor efficiency, changing building practices and the introduction of new materials, tools and techniques.

Current material prices are furnished by the Bureau of Labor Statistics, based on information from a group of dealers in each city who report on prices for materials delivered to job site, in average quantities, for private residential construction. Since 1942 some of the regular items have not been available. In these cases alternate items have been substituted with appropriate adjustments in calculations.

Labor costs are based on average hourly earnings for the various building trades engaged in residential construction, which include any overtime or bonus pay on a prorated basis. Either union or non-union rates are used, depending upon the prevailing practice in the community.

The figures presented in these tables represent revised indexes for most of the individual cities and for the average for all cities. These indexes supersede all others previously published. Those who are interested in a detailed discussion are referred to an article in the REVIEW for March 1946 ("Improvements in the Building Cost Index") which

presents a summary of the history and development of this series. Reprints are available from the Division of Operating Statistics, FHLBA.

Page 7: These combined indexes for all cities represent a three months' moving average of costs for approximately 50 cities reporting in three-month intervals. (See REVIEW, Table 4.)

Pages 8 and 9: This table shows the trend of costs in the individual cities for which data are available. Cities in the New York, Indianapolis, Des Moines and Portland Districts report in January, April, July and October; Pittsburgh, Cincinnati, Little Rock and Los Angeles in February, May, August and November; and Boston, Winston-Salem, Chicago and Topeka in March, June, September and December. (See REVIEW, Table 3.)

Pages 10, 11 and 12

RESIDENTIAL CONSTRUCTION: Based on data compiled by the *Bureau of Labor Statistics* from reports on building permits issued for private construction and contracts awarded for public construction, received from about 4,000 cities, towns and minor civil divisions.

Page 10: This table presents, by FHLB District and state, annual estimates of the number and permit valuation of all new residential construction in all *nonfarm* areas of the United States.

Page 11: To bring residential construction statistics closer to the actual operations of savings and loan associations, this table presents, by FHLB District and state, estimates of nonfarm residential construction during 1945, by source of funds. Private construction is further broken down to show the number and permit valuation of 1- and 2-family dwellings—the type accepted as security for the great majority of mortgage loans made by these institutions.

Page 12: *Table 10* presents the number and permit valuation of new dwelling units started in all *nonfarm* areas during each month of 1944 and 1945, by type of structure and source of funds. A similar breakdown on annual totals from 1934 through 1945 is shown in *Table 11*, while *Table 12* carries comparable data for all *urban* residential construction. Estimates for years prior to 1936 were made by the National Bureau of Economic Research. (See REVIEW, Table 2.)

Pages 13, 14, 15, 16, 17 and 18

SAVINGS AND LOAN MORTGAGE LENDING STATISTICS: Compiled by the *Division of Operating Statistics, FHLBA*, from monthly reports of cooperating savings and loan associations. Approximately 3,000 Federal, state chartered members and nonmember associations, whose combined assets represent about 81 percent of the total assets of all savings and loan associations, are included in the sample upon which these estimates are based.

Table 13 shows a breakdown of total loans made, by purpose and by class of association originating the loans. The percentage distribution indicates the relation of that purpose or class to the aggregate loans for the year.

Table 14 gives the volume of all savings and loan mortgage lending, by purpose, in each FHLB District. (See REVIEW, Tables 6 and 7.)

Table 15 shows mortgage loans made by all insured associations in each FHLB District and state.

Pages 19, 20, 21 and 22

MORTGAGE RECORDING DATA: Compiled by the *Division of Operating Statistics, FHLBA*, from monthly reports prepared by cooperating institutions. The coverage on which final estimates are based includes approximately 625 areas containing more than two-thirds of the total nonfarm population. To relate mortgage recording to the financing of 1- to 4-family homes, only mortgages of \$20,000 or less on properties in nonfarm areas are counted.

Since almost every mortgage is recorded, this series provides an adequate means of appraising the role being played by various types of lenders. It should be noted, however, that assignments of mortgages are not reflected in this series. To the extent that certain lenders (e. g., insurance companies) purchase mortgages originated and recorded by other lenders (e. g., mortgage companies) recording statistics may overstate or underestimate the importance of a particular type of lender as the ultimate source of mortgage credit.

It should also be pointed out that mortgage recording data are not directly comparable with the estimates on home mortgage lending presented in *Tables 13* and *14*. The periods covered are not necessarily the same. Lending statistics are reported as of the date of loan commitment, while recording figures reflect the actual date of mortgage registrations. Further, alterations in the terms of an existing contract may necessitate a new registration. In the case of refinancing an institution's own mortgage, for example, the face amount of the instrument would appear in the recording totals, whereas only that portion which represented an increase of funds loaned would be included in the monthly lending figures.

Table 16 provides a detailed summary of the annual recordings made by each type of mortgagor from 1942 through 1945, by FHLB District and by state. The percentage figures relate to the share of the total mortgage recording business in a given area. (See REVIEW, Table 8.)

Table 17 shows the estimated amount of mortgages recorded throughout the United States by each type of lender, monthly since January 1942. It also shows the relationship of the business done by each type of mortgagor to the total volume of business for any given month as well as for the annual total. (See REVIEW, Table 9.)

Page 23

FEDERAL HOME LOAN BANK ADVANCES: Compiled by the *Bank Operations Section, FHLBA*. The ability of the FHLB System to serve as a credit reservoir for its member institutions is best demonstrated by the volume of FHLB advances. *Table 18* shows, by months, the amount of new advances made, repayments on old balances, and advances still outstanding at the end of the period. (See REVIEW, Table 12.)

FHLB ASSETS AND LIABILITIES: Compiled by the *Bank Operations Section, FHLBA*, from annual reports of the

12 FHL Banks. This table presents selected combined balance sheet items for the FHL Banks, 1941-1945, and for individual Banks in the latter year.

Pages 24 and 25

FEDERAL HOME LOAN BANK SYSTEM: Compiled by the *Division of Operating Statistics, FHLBA*, from reports submitted by FHLB members. Asset figures in *Tables 20* and *21* are from tabulations made shortly after the end of month or year indicated. Since these were based on latest data available at the time, asset figures may differ slightly from totals compiled later from regular annual reports.

Table 20 presents 1945 year-end data, by type of institution, by District and state. *Table 21* gives comparable national data for 1935-1945. (See REVIEW, Table 18, quarterly from March.)

Table 22 shows selected statistics for all operating savings and loan associations for 1922-1944. These data are compiled from annual reports of FHLB member associations and of state savings and loan supervisory authorities.

Page 26

PROGRESS OF INSURED ASSOCIATIONS: Compiled by the *Division of Operating Statistics, FHLBA*, from the monthly reports required of all institutions insured by the Federal Savings and Loan Insurance Corporation. The selected balance sheet items presented are as of the end of the reporting period. Data on operations represent the quarterly total of new mortgage loans made, and the total amount of new private investments and repurchases. The repurchase ratio is obtained by dividing the repurchases for the quarter by the total new investments received and it would be possible, therefore, for this figure to exceed 100 percent if there were a net decline in share capital. (See REVIEW, Table 13.)

Page 27

WAR HOUSING: Compiled by the *Housing Market Service, National Housing Agency*. Data cover new construction and conversions, July 1, 1940 through August 31, 1945. Categories include: H-1, for essential in-migrant war workers; H-2, to relieve general congestion in war industry areas; and H-3, to take care of individual hardship cases, particularly veterans. "To Be Started" is housing which was approved as of VJ Day. The publicly financed portion was then terminated where this was in the public interest; privately financed quotas which had not been taken up by builders were withdrawn.

INSURED MORTGAGE OPERATIONS: Compiled by the *Division of Research and Statistics, Federal Housing Administration*. This table shows the number of mortgages which became premium paying (i. e., actually in effect) from 1938 through 1945. The various Titles indicate the part of the National Housing Act under which they were processed. Not all Titles have been in effect during the entire period. All data are for mortgages on 1- to 4-family houses. Figures represent the gross insurance written during the period and do not take account of

(Continued on p. 28)

Explanatory Notes

(Continued from p. 4)

principal repayments on previously insured loans. Title VI loans are all on newly constructed homes. Title II loans may be either on new or existing dwellings. (See REVIEW, Table 11.)

INSURED MORTGAGE HOLDINGS: Compiled by the *Division of Research and Statistics, Federal Housing Administration*. Based on the original *face amount* of instruments, this table shows the insured mortgages held by the various classes of institutions. Figures do not include

terminated mortgages nor cases in transit to or being audited by the FHA, but only the mortgages on 1- to 4-family homes insured under Titles II and VI. The Federal agency classification includes the RFC Mortgage Company, Federal National Mortgage Association, and the U. S. Housing Corporation. The "other" classification includes mortgage companies, finance companies, endowed institutions, private and state benefit funds, etc. (See REVIEW, Table 19, published in March and September.)
