# THE MONTHLY REVIEW 

Of Agricultural, Industrial, Trade and Financial Conditions in the Tenth Federal Reserve District

FEDERAL RESERVE BANK OF KANSAS CITY

CROP production in the District during 1935, although generally below the 1928 to 1932 average, was considerably above the short production of 1934, and the farm value of this season's crops was nearly 30 per cent greater than the farm value of crops harvested in the District in 1934, despite prevailing lower price levels. Rental and benefit payments to farmers were smaller than in 1934, but income from crop production in the United States was estimated to exceed income in 1934 by nearly 12 per cent. The ratio of prices received by farmers to prices paid for commodities bought advanced one point from November 15 to December 15 to 90 per cent of the pre-war level as compared to 80 per cent on December 15, 1934. Late December and early January snows were beneficial to winter wheat, the seeded acreage of which was somewhat above the average in the District, but additional moisture was needed in the western and northern sections of the District.

Marketings of oats and barley exceeded the average volume during 1935, but marketings of wheat, corn, rye, and kafir were below average in volume, although receipts of wheat and rye were heavier than in 1934. Farm stocks of oats on January 1, 1936, were above the average holdings, but reserves of wheat and corn were at low levels.
Live stock marketings during 1935 were below marketings in 1934, which were increased by drought liquidations and Government purchases, and were generally below the average volume. This was particularly true of marketings of hogs. Live stock returns were better than in 1934 and values were at the highest levels in five years. Somewhat larger than average feed supplies per animal unit were indicated for the 19351936 season and there was an increase in the number of cattle and sheep in the District on feed for market as compared to the number on feed January 1, 1935. There was a prospective increase of nearly 30 per cent in the number of sows to farrow in the District in the spring of 1936 over farrowings in 1935. Winter ranges, cattle, and sheep continued in good condition.

Debits by banks to individual accounts were 11.3 per cent greater in 1935 than in 1934 and savings deposits recorded an increase of 5.9 per cent during the year. Business failures continued at a low level. The dollar volume of department store sales increased 5.9 per cent over 1934 and was the highest since 1931. Wholesalers' sales recorded a gain of 1.2 per cent during the year. Sales of lumber in board feet were 24.6 per cent larger than in 1934, and building activity in the District, although still at a low level, showed improvement throughout the year.
Flour production was smaller than in 1934 and was about 8 per cent below the average production. Meat packing establishments operated on a reduced scale as compared to 1934, although commercial slaughter was above the average volume

## BUSINESS IN THE TENTH FEDERAL RESERVE DISTRICT

Percentages of Increase, or Decrease (一), for December 1935 over November 1935 and December 1934 and for the Year 1935 over the Year 1934.

with the exception of hog slaughter. The production of crude petroleum in 1935 exceeded production in 1934 by 7 per cent and was the highest since 1930. Bituminous coal production increased 13.1 per cent to the highest level in four years. The tonnage and value of zinc and lead shipments were the largest since 1930.

## Financial

MEMBER BANK OPERATIONS: Loans and discounts at fifty-two reporting member banks in the District increased 3 per cent from December 4 to December 31 and were 10.5 per cent larger than on January 2, 1935. Investment holdings declined 2.5 per cent during the four-week period but were slightly larger than a year ago, reflecting an increase in holdings of obligations fully guaranteed by the United States Government as holdings of United States Government securities and other securities declined.

Adjusted demand deposits increased fractionally from December 4 to December 3 I and were 17.9 per cent larger than on January 2, 1935. Time deposits and inter-bank deposits declined slightly in four weeks but increased 3.1 and 17.1 per cent, respectively, during the year. United States Government deposits were substantially larger than four weeks earlier but were 42.7 per cent smaller than fifty-two weeks earlier.
The principal resource and liability items of the consolidated weekly condition statements of the fifty-two reporting banks, for the three dates of comparison:

RESERVE BANK OPERATIONS: Bills discounted, although showing an increase over a year ago, continued at a low level, and the small holdings of bills purchased declined during the year. Industrial advances were relatively unchanged between December 4 and December 3r but were substantially larger than on January 2, 1935. Holdings of United States Government securities increased fractionally in four weeks and 16.2 per cent in fifty-two weeks.

Federal reserve note circulation increased slightly from December 4 to December 31 and was 20.6 per cent greater than on January 2, 1935. Member banks' reserve deposits declined I. 5 per cent during the four weeks but increased 7.8 per cent during the year.

The principal resource and liability items of the weekly condition statements of the Federal Reserve Bank of Kansas City and branches, for the three dates of comparison:

|  | Dec. 31, 1935 | Dec. 4, 1935 | Jan. 2, 1935 |

| Member banks' reserve deposits | 168,793,055 | 171,346,844 | 156,583,963 |

of paper and all maturities, remains unchanged at 2 per cent.
RESERVE BANK CHECK COLLECTIONS: The dollar volume of check collections through this bank and branches
was 8.5 per cent greater in December than in the preceding month and 15.9 per cent greater than in December, 1934. The number of checks handled increased II. 9 per cent in December and was 12.2 per cent larger than in the corresponding month a year ago. The dollar volume and the number of items increased 10.3 and 4.5 per cent, respectively, during 1935 as compared to 1934 and were at the highest level since 1930.

Check collections through the Federal Reserve Bank of Kansas City and branches at Omaha, Denver, and Oklahoma City:

|  | Items |  |  | Amount |  |  |
| :--- | :---: | ---: | :---: | ---: | ---: | ---: |
|  | 1935 | 1934 |  | 1935 | 1934 |  |
| December......... | $6,163,231$ | $5,494,616$ | $\$$ | $926,194,000$ | $\$$ | $799,095,000$ |

## Trade

RETAIL: Retail distribution, as reflected by the dollar volume of sales at thirty-two reporting department stores in leading cities of the District, showed about the normal seasonal increase from November to December and was 3.3 per cent above the sales volume in December, 1934. Sales during 1935 exceeded the total in 1934 by 5.9 per cent and were at the highest level since 1931.

Month-end stocks declined by about the usual seasonal amount from November 30 to December 31 but were 3.7 per cent above inventories of December 31, 1934.
Collections on open accounts during December averaged 46.1 per cent of amounts receivable at the close of the preceding month as compared to 48.3 per cent in November and 46.2 per cent in December, 1934. Installment collections averaged 15.9 per cent in December, 16.6 per cent in November, and 15.5 per cent in December, 1934.

According to preliminary estimates of the Bureau of Foreign and Domestic Commerce, daily average sales of general merchandise in small towns and rural areas in the United States for the year 1935 were about 19 per cent higher in dollar volume than in 1934 and were the highest for any year since 1929. Daily average sales of variety stores and chain grocery stores were about I and 4 per cent, respectively, above 1934 and were the highest since 1931.

WHOLESALE: Wholesale distribution, as reflected by the combined dollar volume of five representative lines reporting to this bank, increased 7.8 per cent as compared to December, 1934. The December sales volume declined 9.6 per cent, or somewhat more than the usual seasonal amount, from November. Sales during the year were I. 2 per cent greater than in 1934.

Sales of dry goods, groceries, and furniture declined from November to December, but sales of hardware and drugs increased, and all lines except dry goods recorded increases over December, 1934. During the year, sales of hardware increased 3.1, furniture 18.5 , and drugs 4 per cent, but sales of dry goods and groceries declined 8.7 and 0.7 per cent, respectively.

Stocks of merchandise of the five lines combined declined 6.7 per cent from November 30 to December 3I but were 3.8 per cent larger than on December 31, 1934. Stocks of dry goods, groceries, furniture, and drugs declined during December, while stocks of hardware increased. Inventories of hardware,
furniture, and drugs were larger than one year earlier, but inventories of dry goods and groceries were smaller.

## Life Insurance

Sales of new paid-for ordinary life insurance in the seven states whose areas or parts thereof comprise the District increased from November to December and were slightly above sales in ${ }_{\wedge}$ December, 1934. Sales for the year 1935 declined 6.6 per cent as compared to 1934.
Life insurance sales reported to the Life Insurance Sales Research Bureau by companies representing 90 per cent of the total legal reserve ordinary life insurance outstanding in the United States, thousands omitted:

|  |  | Lumb |  |  |  |

Retail lumber sales at 155 reporting yards in the District declined during December by less than the usual seasonal amount and were 43.3 per cent greater in board feet than in December, 1934. Sales for the year exceeded the 1934 total by 24.6 per cent. Dollar sales of all materials were smaller than in November but were larger than in December, 1934.
Stocks of lumber increased 3.4 per cent from November 30 to December 31 and were 12.8 per cent above stocks on hand one year earlier. Collections during December averaged 4 1. 6 per cent of amounts outstanding at the close of the preceding month as compared to a ratio of 40.8 per cent in November and 35.5 per cent in December, 1934 .

December business at the 155 reporting yards:

1935 exceeded production in 1934 by about 25 per cent. Lumber shipments during the year were I per cent above production and were 29 per cent above shipments during 1934. Orders booked in 1935 were 3 per cent above production and were $3^{1}$ per cent above orders booked in 1934.

## Building

The value of total building contracts awarded and of residential contracts awarded in the Tenth District, according to statistics of the F. W. Dodge Corporation, increased from November to December and was substantially above the value of awards in December, 1934, with residential awards showing relatively greater improvement. The value of total building contracts awarded during 1935 was 27.1 per cent, and of residential contracts awarded 83.5 per cent, larger than in 1934 and awards, although representing only about half the average volume during the past eight years, were at the highest level since 1931.
The value of construction contracts awarded, as reported by the F. W. Dodge Corporation:

| December......... | Tenth District |  | United States |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1935 | 1934 | 1935 | 1934 |
|  | \$15,071,942 | \$ 5,458,156 | \$ 264,136,500 \$ | 92,723,700 |
| November. | 11,079,025 | 4,958,079 | 188,11 5,000 | 111,740,800 |
| Year | 89,845,201 | 70,693,799 | 1,845,207,800 | 1,545,762,300 |
|  | ESIDENTI | CONTRAC | AWARDED |  |
|  | Tenth District |  | United States |  |
|  | 1935 | 1934 | 1935 | 1934 |
| December | \$ 2,629,300 | \$ 380,998 | \$ 45,140,100 | \$ 14,550,500 |
| November | 1,245,541 | 668,791 | 39,695,200 | 19,924,700 |
| Year.. | 18,374,958 | 10,013,324 | $4,8,895,800$ | 249,070,900 |

The number of permits issued by building departments in seventeen Tenth District cities declined during December, but the estimated cost of construction increased, and both permits and expenditures were above December, 1934. Permits and expenditures during 1935, although still at a low level, increased as compared to 1934 and were the highest since I93I.

| Albuquerque, $\mathrm{N} . \mathrm{M}$. | Permits |  | Estimated Cost |  |

## Flour Milling

Flour mill operations in the District averaged 50 per cent of full-time capacity during December as compared to 57.8 per cent in November and 60 per cent in December, 1934, and production declined somewhat more than seasonally from November and 13.7 per cent from December, 1934. Mill operations during 1935 averaged 60 per cent of full-time capacity as compared to 60.5 per cent in 1934, and production for the year was slightly below that of 1934 and about 8 per cent below the ten-year average.

Flour production at the principal milling centers of the District, as estimated from the weekly reports of southwestern mills to the Northwestern Miller:

|  | Dec. 1935 Barrels | Nov. 1935 Barrels | Dec. 1934 Barrels | Year 1935 Barrels | Year 1934 Barrels |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Atchison | 92,488 | 114,24I | 103,944 | 1,353,274 | 1, 404, 833 |
| Kansas C | 464,196 | 514,011 | 457,750 | 6,070,468 | 5,856,752 |
| Salina | 132,747 | 159,205 | 137,490 | 1,854,485 | 1,767,016 |
| Wichita | 117,355 | 109,382 | 173,474 | 1,893,090 | 1,799,057 |
| Outside. | 753,071 | 907,859 | 935,693 | 11,284,757 | 11,674,024 |
| Tota | 1,559,857 | 1,804,698 | 1,808,351 | ,45,074 | 22,501,68 |
| *U | 4,770,847 | 5,587,065 | 5,011,004 | ,287,460 | 4,256,9 |

An advance in wheat prices during December, with a subsequent increase in flour prices, stimulated some demand for flour, but flour buying was otherwise inactive during the month, reflecting a dull holiday and pre-inventory demand and the unwillingness of buyers to accumulate stocks pending the processing tax decision. Prices of bran advanced during the month with an improvement in demand and limited offerings, but prices of shorts declined.

## Grain Marketing

Receipts of wheat, oats, rye, and barley at the five principal markets of the District during 1935 were heavier than in 1934, but receipts of corn and kafir declined. Marketings of oats and barley during the year were 16.9 and 2 I.I per cent, respectively, above the ten-year average, but marketings of wheat were 4 I. 8 , corn 46.2 , rye 28.6 , and kafir 8 I. 9 per cent below the average.
Receipts of grain at the five markets:

|  | Wheat Bushels | Corn Bushels | Oats Bushels | Rye Bushels | Barley Bushels | Kafir Bushels |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Agriculture

Late December and early January snows over the greater part of the District were beneficial for winter wheat, but the heaviest precipitation occurred mostly in those areas where subsoil moisture already was sufficient for present needs, and additional moisture was needed in the northern and western portions of the District. There was little change in the condition of winter wheat during December as much of the crop was reported in the dormant stage. Winter wheat was furnishing only limited pasture in many areas.

Crop production in the District during 1935 was considerably greater than the short production of 1934, but was generally below the five-year, 1928-1932, average production. An increase in harvested acreage, a lower percentage of abandonment, and a substantially higher combined yield per acre tended to increase production over last year. Continued drought conditions during early spring, excessive moisture during May and June, a moisture shortage and high temperatures in July and August, and a wet fall and early October frosts were contributing factors to below average production. Wheat and corn were below average in quality, owing to rust damage in wheat and a high moisture content in corn.
Although prices received for this season's crops were somewhat below those received for the short crops of last year, increased production more than offset lower prices, and the December I farm value of crops produced in the District was estimated at nearly 30 per cent more than the value of crops harvested in 1934, as compared to an increase of 7 per cent in crop values in the United States. Benefit payments received by farmers in 1935 were less than in 1934, but the income of farmers from crop production in the United States was estimated by the Department of Agriculture at nearly 12 per cent above income in 1934.
The harvested acreage of forty-four and the December I farm value of sixty-four crops, estimated by the Department of Agriculture, thousands omitted:

|  | Total Acreage <br> Forty-Four Principal Crops |  |  |

Farm stocks of wheat in the District on January I were about 15 per cent smaller than the low stocks held on January 1, 1935, and about 61 per cent below the 1928-1932 average holdings. Farm stocks of corn were nearly three times the amount of reserves a year ago but were less than half the average holdings. Stocks of oats were over two and one-half times as large as on January I, 1935, and about 23 per cent above the average, partly because of the smaller number of live stock units to be fed.

Grain stocks on farms on January I, reported by the Bureau of Agricultural Economics, thousands omitted:

|  | Wheat |  | Corn |  | Oats |  |

Farm real estate values increased further during the year ending March I, 1935, according to a report just issued by the Division of Land Economics of the United States Department of Agriculture. With a continued increase in income from agricultural production and a continuation of farm mortgage debt adjustment programs, forced sales as a result of debt difficulties and failure or inability to pay taxes declined, and the frequency of voluntary sales increased.

Index numbers of the estimated value per acre of farm real estate as of March 15, reported by the Department of Agriculture, the 1912 to 1914 average equalling 100 :

December receipts of cattle and calves at the six principal live stock markets of the District were 12.1 and 23.3 per cent, respectively, above the average volume, but receipts of hogs were 51.3 and sheep 18.1 per cent below the average volume. Marketings of all classes of live stock during 1935 were below marketings in 1934, when stockmen were compelled to reduce live stock numbers materially because of short feed supplies and when many cattle, calves, and sheep were purchased by the Government in emergency drought areas. A decline of 56 per cent in hog receipts during 1935 reflected the heavy decrease in production due in part to control programs, high feed prices, and an unfavorable feeding ratio which persisted throughout 1934 and the first half of 1935 . Receipts of calves during the year exceeded the average annual volume by about

2 per cent, but receipts of cattle were about 9 , hogs 60 , and sheep 14 per cent below the average. Horses and mules were in liberal supply, exceeding the ten-year average receipts by about 26 per cent.
Prices of all classes of live stock increased at the Kansas City market during December to close the year well above the levels of December, 1934. Influenced by limited receipts, improved quality of offerings, and the absence of forced liquidations as in 1934, live stock prices were at a generally higher level in 1935, and values were the highest in five years or more. Cattle prices reached their top late in April, hogs in mid-August, and lambs late in December.
Top prices per hundredweight of live stock at the Kansas City market:

Shipments of stocker and feeder live stock from four markets in the District were below the average volume both in December and during 1935. The decline in shipments of hogs and sheep was particularly heavy but shipments of calves during the year exceeded the average by 14.3 per cent.
Somewhat larger than average feed supplies per animal unit were indicated for the 1935-1936 season, as feed grain supplies were only about 13 per cent below the 1928-1932 average while grain consuming animal units were 16 per cent below the average. Hay production was about 9 per cent above the average with hay consuming animal units about equal to the average number.
The Bureau of Agricultural Economics estimated that the number of cattle on feed for market in the western Corn Belt states on January 1, 1936, was 48 per cent above the small number on feed one year earlier but from 25 to 30 per cent below the 1930-1934 average number. There was an increase of 60 per cent in Missouri, of 95 per cent in Nebraska, and of 50 per cent in Kansas as compared to January 1, 1935. Marketing plans indicated a materially larger supply of grain finished cattle during the first four months of 1936 than during the corresponding period of 1935 .
The number of sheep and lambs on feed for market in the principal feeding areas of the United States was estimated as 5.4 per cent smaller on January 1, 1936, than one year earlier, and all of the decrease occurred in the western Corn Belt. . There were sharp decreases in Kansas and Oklahoma, where many
lambs were feeding in corn fields or on wheat pastures in 1934, but there were increases in the Scottsbluff section of Nebraska and Wyoming, in the remainder of Nebraska, and in Colorado, Missouri, and New Mexico which resulted in a net increase of nearly 4 per cent in the District.

The condition of winter ranges, cattle, and sheep showed a slight seasonal decline during December but continued near the average condition. Late December and early January snows widened grazing areas and relieved stock water shortages. Feed supplies were plentiful except in a few restricted drought areas. Cattle and sheep were in good flesh, with few thin stock and light death losses.

An increase of 46 per cent in the fall pig crop and a decrease of 16 per cent in the combined spring and fall crops of 1935 as compared to 1934 were indicated for states in the District by the December survey of the Department of Agriculture. The fall pig crop in the United States increased 3I per cent over 1934 and the combined spring and fall crops declined 5 per cent. The number of sows to farrow in the District in the spring of 1936 showed a prospective increase of nearly 30 per cent over farrowings in 1935, as compared to a prospective national increase of 24 per cent.

## Meat Packing

Meat packing operations in the District, as reflected by packers' purchases at the six principal live stock markets, direct shipments of hogs included, increased during December but were below operations in December, 1934. Operations during 1935 were considerably below the level of 1934 when many cattle, calves, and sheep were slaughtered for the Government account. Packers' purchases of calves during the year exceeded the ten-year average by 12.7 per cent, but purchases of cattle were 11.5, hogs 58.9 , and sheep 18.7 per cent below the average.
The Government's report of Federally inspected live stock slaughter in the United States, excluding slaughter for Govern-

*Includes 745,655 hogs shipped direct to packers' yards.
NOTE: Government purchases of hogs included in the 1933 totals and of cattle, calves, and sheep in the 1934 totals.
ment relief purposes, showed an increase in hog slaughter, decreases in cattle and sheep slaughter, and calf slaughter about unchanged from November to December. More cattle, calves, and sheep and fewer hogs were slaughtered than in December, 1934. During 1935, the slaughter of cattle declined 2.8, calves 6.6 , and hogs 40.6 per cent, but sheep slaughter increased 9.9 per cent as compared to 1934. The slaughter of cattle during the year was 8.8 , calves 15.1 , and sheep 16.5 per cent above the ten-year average, but hog slaughter was 42.2 per cent below the average.

Live stock slaughtered under Federal meat inspection in the United States, reported by the Bureau of Agricultural Economics from compilations of the Bureau of Animal Industry:

|  | Cattle | Calves | Hogs | Sheep |
| :---: | :---: | :---: | :---: | :---: |
| December 19 | 892,173 | 480,878 | 2,874,855 | 1,368,654 |

## Cold Storage Holdings

United States cold storage stocks of beef, pork, lamb and mutton, poultry, miscellaneous meats, and lard accumulated seasonally during December and there was a seasonal withdrawal of eggs, butter, and cheese. Holdings of all commodities except eggs were smaller than on January I, 1935, stocks of pork and lard recording declines of 52.9 and 55.6 per cent, respectively, during the year. Storage stocks of beef were 35.4 and cheese 17 per cent above the January I five-year average, but holdings of pork were 44.1, lamb and mutton 17.6, poultry 9 , miscellaneous meats 3.4 , lard 33.5 , and butter 25.8 per cent below the average. Holdings of eggs approximated the average volume.
United States cold storage holdings reported by the Bureau of Agricultural Economics:

|  | $\begin{gathered} \text { *Jan. } \mathbf{1} \\ \text { I936 } \end{gathered}$ | $\begin{array}{r} \text { Dec. I } \\ 1935 \end{array}$ | Jan. 1 1935 | $\underset{5-\mathrm{Yr} . \mathrm{Av}^{\mathrm{J}} .}{\mathrm{Jan.} \mathrm{I}}$ |

## Coal

Bituminous coal production at mines in the District during December was slightly below production in November but was 1.4 per cent above production in December, 1934. Coal production during 1935 exceeded the 1934 tonnage by 13.1 per cent and was at the highest level since 193 r .
Bituminous coal production reported by the Bureau of Mines:

|  | *Dec. 1935 | Nov. 1935 | Dec. 1934 | *Year 1935 | Year 1934 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Colo. | 679,000 |  |  |  |  |
| Kans. \& Mo... | 693,000 | 618,000 | 719,000 | 6,298,000 | 5,800,000 |
| N. M. | 144,000 | 153,000 | 123,000 | 1,374,000 | 1,250,000 |

| U. S. | 34,829,000 | 33,285,000 | 32,526,000 | 367,980,000 | 359,368,000 |

## Petroleum

The estimated flow of crude oil in the five oil producing states of the District averaged 724,200 barrels daily during December as compared to 758,000 barrels in November and 686,600 barrels in December, 1934. Gross production declined slightly from November but was 5.5 per cent greater than in December, 1934. Crude oil production during 1935 was 7 per cent above production in 1934 and the highest since 1930 .

Gross production of crude oil, estimated from the weekly reports of the American Petroleum Institute for December, and officially reported by the Bureau of Mines for November, 1935, and December, 1934:

|  | Dec. 1935 Barrels | Nov. 1935 Barrels | Dec. 19.34 Barrels | Year 1935 Barrels | Year 1934 Barrels |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Oklahoma | 14,919,000 | 15,319,000 | 14,703,000 | 184,904,000 | 180,224,000 |
| Kansas... | 4,452,000 | 4,385,000 | 3,933,000 | 54,787,000 | 46,526,000 |
| Wyoming. | 1,174,000 | 1,107,000 | 1,071,000 | 13,656,000 | 12,603,000 |
| Colorado.. | 127,000 | 122,000 | 96,000 | 1,548,000 | 1,141,000 |
| New Mexico.... | 1,778,000 | 1,806,000 | 1,478,000 | 20,514,000 | 16,868,000 |
| Total 5 states | 22,450,000 | 22,739,000 | 21,281,000 | 275,409,000 | 257,362,000 |
| Total U. S....... | 85,899,000 | 86,476,000 | 75,010,000 | 991,130,000 | 908,278,000 |

Mid-continent crude oil prices continued unchanged throughout the year at schedules ranging from 76 cents per barrel for oil testing below 25 degrees gravity to $\$ 1.08$ per barrel for that testing 40 degrees and over.
Field operations were at a high level in 1935, and there was a substantial increase in the number of wells completed and in the amount of new production as compared to 1934 .

## Zinc and Lead

Shipments of zinc ore and lead ore from the Tri-State district increased during the four weeks ending December 28 and were substantially heavier than during the corresponding four-week period ending December 29, 1934. Shipments of zinc ore during 1935 were the heaviest since 1930 and of lead ore the heaviest since 1929.

Zinc and lead prices were unchanged during December at $\$ 32$ and $\$ 47$ per ton, respectively, as compared to $\$ 26$ and $\$ 36$ in December, 1934. The average price received for zinc was about $\$ 28.81$ per ton in 1935 and $\$ 27.11$ per ton in 1934. Lead prices averaged about $\$ 4 \mathrm{I} .93$ per ton in 1935 and $\$ 39.70$ per ton in 1934. The shipment value of both zinc and lead was the highest since 1930 .

The tonnage and value of zinc ore and lead ore shipments from Oklahoma, Kansas, and Missouri:

| 4 Wks. ended Dec. 28,1935 | $Z_{\text {inc }}$ Ore |  | Lead Ore |  |

## Cement

Production of finished Portland cement in the District increased slightly from November to December and was 19.9 per cent larger than in December, 1934. Production for the year 1935 increased 4.5 per cent over production in 1934. Shipments declined during December but were 55.8 per cent above shipments in December, 1934, and total shipments during 1935 exceeded shipments in 1934 by 7.8 per cent. Stocks increased 8.7 per cent from November 30 to December 31 and were 3.3 per cent above stocks on hand December 31, 1934.

Index of physical volume of production, adjusted for seasonal variation, 1923-1925 average $=100 . \quad$ By months, January 1929 to December 1935. Latest figure, December preliminary, 103.

Index of number employed, adjusted for seasonal variation, $1923-1925$ average $=100$. By months, January 1929 to December 1935. Latest figure, December, 85.6.

Indexes of value of sales, $19^{2} 3-19^{25}$ average $=$ 100. By months, January 1929 to December 1935. Latest figures, December preliminary, adjusted $8_{4}$, unadjusted 145 .

Indexes of number of cars loaded, adjusted for seasonal variation, 1923-1925 average $=100$. By months, January 1929 to December 1935. Latest figures, December, total 71, merchandise 66.

## National Summary of Business Conditions

By the Board of Governors of the Federal Reserve System

Industrial production and employment showed a further increase in December, when allowance is made for the usual seasonal changes, and distribution of commodities to consumers was in increased volume.

PRODUCTION AND EMPLOYMENT: The Board's seasonally adjusted index of industrial production, which takes account of the considerable decline that usually occurs in December, advanced from $9^{8}$ per cent of the 1923-1925 average in November to 103 per cent in December, the highest level reached by this index since the spring of 1930. As in other months during the last half of 1935, the rise in the index was due in large part to increases in output of durable manufacturers, particularly iron and steel and automobiles. During the first half of January production of steel and automobiles increased somewhat, following declines in the holiday period. Output at mines was also larger in December than in November. Activity at cotton and silk textile mills declined less than is usual in December, while at woolen mills there was a more than seasonal decrease in operation. Output at shoe factories increased.

Factory employment showed little change between the middle of November and the middle of December, when a slight decline is customary. The number employed continued to increase at steel mills, automobile factories, foundries and machine shops, and at railroad car building plants. There was also an increase in employment at shoe factories. Seasonal declines were reported by many other important industries. Factory payrolls were larger in the middle of December than a month earlier.

The value of construction contracts awarded increased sharply in December, according to figures of the F. W. Dodge Corporation, although a decline is usual in that month. There was a further substantial growth in the volume of awards for publicly-financed projects and residential building also increased.

DISTRIBUTION: Sales at department stores and variety stores, as well as sales by chain stores and mail order houses serving rural areas, showed larger increases than are usual in December. Freight-car loadings decreased by less than the usual seasonal amount in December, and the Board's adjusted index increased from 66 per cent of the 1923 -1925 average in November to 71 per cent, continuing the advance begun last August.

COMMODITY PRICES: The general level of wholesale prices showed little change during December. In the first three weeks of January there was some decline in the general index, reflecting in part lower prices for cotton gray goods, flour, pork, and silk. Prices of hogs, rubber, and petroleum increased.

BANK CREDIT: Excess reserves of member banks, which declined by $\$ 600,000,000$ in the third week of December, increased by $\$ 320,000,000$ during the following five weeks, reflecting the usual seasonal return flow of currency from circulation, a decline in Treasury balances with the Federal reserve banks, and a small increase in monetary gold stock. On January 22 excess reserves totaled $\$ 3,030,000,000$, as compared with the peak of $\$ 3,300,000,000$ on December 11, 1935.

Changes in the condition of reporting member banks in leading cities between December 18 and January 15 reflected largely the influences of seasonal factors.
