Tech Pulse Index

Taking the Pulse of the Technology Sector Released March 10, 2004

In February 2004, the real Tech Pulse Index grew at an annualized rate of 35.3% and the nominal Tech Pulse Index grew at an annualized rate of 28.0%. This is in line with growth in recent months. Over the last year, the real index has growth 36.9% and the nominal index has growth 27.8%. These are the highest twelve-month growth rates since the beginning of the last recession in March 2001. This sustained strength in the Tech-sector seems to indicate a robust recovery. However, employment in the sector is still not growing.

Background

The Tech Pulse Index is a summary statistic that tracks the health of the technology sector of the economy in a timely manner. The Tech Pulse Index is computed monthly from a number of data series that move with the technology sector as a whole. The series used to compute the index are investment, consumption, employment, industrial production, and shipments in the technology sector. Please note that each month's numbers differ from the numbers published in the Current Issues article because we have additional data. Each month's numbers will be released on the second Wednesday of that month.

Next release: April 14, 2004
