

# **IET** *Supplement*

## *Cross-Country Comparison*

### February 2013

This publication contains charts and tables  
compiled by the Data Desk staff  
of the Federal Reserve Bank of St. Louis.

The data are from the G-7 countries, selected emerging markets,  
and the euro area, including output, inflation, labor markets,  
interest rates, government budgets, trade, and more.

## Conventions used in this publication:

1. Charts and tables contain data that were current through January 2013. Unless otherwise indicated, data are quarterly.
2. The *percent change* refers to the percent change from the same period in the previous year. For example, the percent change in  $x$  between quarter  $t-4$  and the current quarter  $t$  is:  $[(x_t/x_{t-4})-1] \times 100$ .
3. All data with significant seasonal patterns are adjusted accordingly.

Dear Reader,

We welcome your comments addressed to:

## Notes

**Euro-Area Data:** Euro-area countries are Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovenia, Slovakia, and Spain. Data series are break adjusted and include all euro area countries for the full sample, with these exceptions: Series for interest rates are not break adjusted.

Euro-area interest rates prior to December 1998 are calculated on the basis of national government yields weighted by GDP. Starting in 1999, short-term rates are euro interbank offered rates. Long-term rates are calculated on the basis of national government bond yields weighted by the nominal outstanding amounts of government bonds in each maturity band.

The euro/dollar exchange rate used in the chart on page 69 is a synthetic rate prior to January 1999. This is constructed by calculating a weighted average of the exchange rates of the euro-area countries, excluding Greece and Luxembourg, against the dollar. The weights are based on 1997 GDP shares.

**German Data:** As a result of reunification, data for all of Germany are now incorporated in the statistical series. The starting periods for unified German data are listed below. Care should be exercised when interpreting the data around these break periods.

Third quarter 1992: capacity utilization.

**Capacity Utilization** covers the manufacturing sector for Canada, China, France, Japan, Korea, Mexico, Russia, the United Kingdom, the United States, and the euro area; manufacturing excluding food, beverage, and tobacco for Germany; mining and manufacturing for Italy; installed capacity utilization for Brazil.

**Consumer Price Index** is for all items. The current index is based on goods and services consumed by all individuals for Brazil, Canada, India, Mexico, and Russia; all multi-person households excluding those mainly engaged in agriculture, forestry, and fisheries for Japan; all households except pensioners dependent on state pension and high income households for the United Kingdom; all households except farming and fishing for Korea; all urban households for the United States; all urban and rural residents for China. Data for the euro area, France, Germany, and Italy are based on the harmonized index of consumer prices.

**Current Account Balance** is the sum of merchandise and service exports and income receipts on domestic assets abroad minus the sum of merchandise and service imports and income payments from foreign assets in the domestic economy plus net unilateral transfers.

**Earnings** are based on hourly earnings in manufacturing for Canada, Germany, the United States, and the euro area; hourly earnings in manufacturing excluding construction for France, hourly earnings in industry for Italy; hourly earnings in manufacturing for Mexico, monthly earnings in manufacturing for Brazil, China, Japan, and Russia; monthly earnings for wage earners in manufacturing for Korea, and weekly earnings in manufacturing for the United Kingdom.

German real earnings data prior to 2007 are not strictly comparable with the new figures: Before 2007, gross hourly earnings covered full-time wage earners only. Since the first quarter of 2007, the data refer to the index of gross hourly earnings (excluding extra payments) of full-time wage earners and salaried employees.

The **Exchange Rate** for all countries except the United States is expressed as units of local currency per U.S. dollar. For the United States the trade-weighted exchange rate, **TWEX**, is used. This is a weighted average of the exchange value of the U.S. dollar relative to the major international currencies—the euro, Canadian dollar, Japanese yen, British pound, Swiss franc, Australian dollar, and Swedish kronor. Prior to 1999, the currencies of the euro-area countries (with the exception of Greece) are used instead of the euro.

**Real Effective Exchange Rate** uses normalized unit labor costs in manufacturing. The weighting scheme used to construct the rates, for all except the euro area, is based on disaggregated data for trade among 21 industrial countries in manufactured goods for 2005. For the euro area the weights relate to the trade of the euro area with the other countries. The weights reflect the relative

importance of a country's trading partners in its direct bilateral trade relations and competition in third markets. Normalized unit labor costs in manufacturing are calculated by dividing an index of actual hourly compensation per worker by a five-year moving average index of output per man-hour.

**Employment** data refer to civilian employment for Canada, Germany, Italy, and the United States; industrial employment for France; total employment for Brazil, the euro area, and the United Kingdom; and employment of all persons 15 years of age and older for Japan, Korea, Russia, and Mexico.

**Foreign Exchange Reserve** data are end of period. The dollar value of reserves may fluctuate as a result of changes in reserve holdings and/or changes in the value of the currencies held vis-à-vis the U.S. dollar.

**Government Budget Balance** is the difference between general government current receipts and total outlays. Total outlays consist of current expenditures and net capital expenditures. **Gross Government Debt** incorporates all financial liabilities of the general government sector. The general government sector consolidates the accounts of the central, state, local, and social security sectors. **Net Government Debt** measures the gross financial liabilities of the general government sector less the financial assets of the general government sector. For China and India general government gross debt consists of all liabilities that require payment or payments of interest and/or principal by the debtor to the creditor at a date or dates in the future. This includes debt liabilities in the form of SDRs, currency and deposits, debt securities, loans, insurance, pensions and standardized guarantee schemes, and other accounts payable.

**Industrial Production** measures the change in the volume of output in the mining, manufacturing, oil, electricity, gas, and water industries.

**Long-Term Interest Rate** data refer to the government bond rate. The government bond rate is a composite of yields on federal government bonds with maturities of more than 10 years for Mexico and the United States; long-term public and semi-public sector bonds for France; 7- to 15-year public sector bonds for Germany; 15- to 20-year government bonds through 1990 and 10-year government bonds starting in 1991 for Italy; and 10-year government bonds for Canada, the euro area, Japan, Korea, Russia, and the United Kingdom.

**Reserve Money** data refer to the adjusted monetary base for Japan and the United States; monetary base for Brazil, Canada, Mexico, Russia; and M0 for the United Kingdom. **Reserve Money** is currency in circulation, deposits of the deposit money banks, and demand deposits of other residents (with the exception of the central government) with the monetary authority.

### Adjusted Monetary Base

Japan: currency in circulation and current deposits at the Bank of Japan.  
United States: the sum of currency in circulation outside Federal Reserve banks and the U.S. Treasury, deposits of depository financial institutions at Federal Reserve banks, and an adjustment for the effects of changes in statutory reserve requirements on the quantity of base money held by depositories.

### Notes and Coins in Circulation

United Kingdom: After reforming the rules governing bank reserves, the Bank of England discontinued its M0 series in May 2006 because the data would not be comparable to previous data. *IET* now presents a related series, "Notes and Coins in Circulation," in place of M0. The Bank of England directs interested parties to "Publication of narrow money data: the implication of money market reform" in its Autumn 2005 *Quarterly Bulletin* (<http://www.bankofengland.co.uk/publications/quarterlybulletin/qb050304.pdf>).

### M1

Japan: cash, currency in circulation, and deposit money.  
Euro area: currency in circulation and overnight deposits.  
Brazil: notes and coins held by public, and demand deposits.  
China: currency in circulation, and demand deposits.  
India: currency in circulation and demand deposits at monetary institutions.  
Korea: currency in circulation and demand deposits at monetary institutions.  
Mexico: notes, coins, cheque accounts held by public, denominated in Pesos or in foreign currency, and interest accounts in Pesos.  
Russia: money outside bank and demand deposits in the banking system.

**M1B**

Canada: currency outside banks, chartered bank checkable deposits, less inter-bank checkable deposits.

**MZM**

United States: currency in circulation, travelers' checks, total publicly-held checkable deposits minus cash items in the process of collection and Federal Reserve float, savings deposits, shares in retail money market mutual funds (funds with initial investments of less than \$50,000), net of retirement accounts, and institutional money market mutual funds.

**M2**

Canada: currency outside banks, chartered bank demand and notice deposits, chartered bank personal term deposits, adjustments to M2 (continuity adjustments and inter-bank demand and notice deposits).

United Kingdom: currency in circulation and sterling retail deposits with the U.K. banks and building societies.

United States: MZM less institutional money market mutual funds plus small denomination (less than \$100,000) time deposits.

Brazil: M1 plus open market funds, short-term fixed-yield funds, short-term financial investment funds, remunerated special deposits and bonds of the federal government, states, and municipalities, held by the non-financial public entities.

China: M1 plus quasi-money (time deposits and savings deposits and other deposits).

Korea: M1 plus time and savings deposits and residents' deposits in foreign currency at deposit money banks.

Russia: M1 plus quasi-money (bank system deposits that cannot be directly used for making payments and are less liquid than M1) This include time deposits in national currency and all deposits in foreign currency.

**M2 + CDs**

Japan: M1 plus private deposits, public deposits less demand deposits, and certificates of deposit.

**M3**

Euro area: M1 plus deposits with a maturity up to 2 years, deposits redeemable at notice up to 3 months, repurchase agreements, money market funds, and debt securities up to 2 years.

India: M1 plus post office savings, bank deposits and residents' deposits in foreign currency at deposit money banks, and other time deposits with banks.

Mexico: M1 plus residents' possessions of other bank deposits, securities issued by the Federal Government, securities issued by private entities and the retirement saving funds, plus bank deposits and Federal Government securities in the hand of non residents.

**M4**

United Kingdom: M2 plus wholesale deposits with the U.K. banks and building societies.

**Output Per Worker** is the ratio of real GDP to employment.

**Producer Price Index** covers manufacturing for Canada and the United Kingdom; and total industry for Japan and the United States. Data for the euro area, France, Germany, and Italy are based on the harmonized index of total industry excluding construction.

**Retail Sales** are based on a volume index.

**Stock Exchange Index** refers to all share prices except for the United Kingdom, which excludes financial firms.

**Unemployment Rate** is the harmonized unemployment rate. Unemployment rates represent unemployed persons as a percentage of the labor force (the total number of people employed plus unemployed).
