

National Economic Trends

August 1985

Despite the relatively sluggish growth of the nation's output over the past year, investment in new plant and equipment has continued to boom. Real GNP grew only 2 percent over the year ending in the second quarter of 1985. Nonetheless, real nonresidential fixed investment rose 7.9 percent over this period, so that in the second quarter of this year such investment had risen to 13.1 percent of real GNP, its highest level since 1947.

The relative strength of investment has been characteristic of the nation's economic performance since 1980. For the 1947-80 period, the share of real nonresidential fixed investment reached its peak of 11.5 percent in 1979. From 1980 to 1984, it also averaged 11.5 percent, despite the relatively slow growth of output.

The share of plant and equipment investment is strongly cyclical and tends to move closely with the degree of capacity utilization. When capacity utilization is rising (falling), the share is also rising (falling). Over the past year, however, relatively slow output growth has led to a slight decline in the utilization rate of capacity, but the plant and equipment investment share has continued to post record highs. The Federal Reserve Board index of capacity utilization in manufacturing fell from an 80.8 percent average in the second quarter of 1984 to 80.4 percent in the second quarter of this year.

Some analysts have argued that net investment remains weak. To some extent, the record pace of spending on plant and equipment has been matched by a rise in depreciation of the nation's capital stock. Hence, real net nonresidential fixed investment, which equals gross investment less depreciation, was 4.3 percent of real net national product (GNP less depreciation) in 1984, only slightly above its share in 1979. But the capacity utilization rate was only 80.8 percent in 1984, while in 1979 it was 84.6 percent. Moreover, the recent 4.3 percent share rarely has been exceeded since 1948. In 1965-69 and in 1973, it averaged 4.6 and 4.4 percent, respectively. During those periods, the capacity utilization rate was much higher than recently, averaging 87 percent or more. Thus, the boom in plant and equipment spending also has been a boom in net investment.

The strong pace of both spending on plant and equipment and net growth in the nation's stock of capital, despite generally weak output growth, has arisen from substantial improvements in investment incentives. Tax changes and the slowing in inflation have resulted in substantial increases in cash flow from depreciation expenses on existing assets and prospective purchases.

HISTORICAL SOURCES OF NATIONAL INCOME AND PRODUCT ACCOUNTS DATA

The NIPA estimates for 1929-76 are in The National Income and Product Accounts of the United States, 1929-76: Statistical Tables (Stock number 003-010-0010T-1, price \$10.00). Estimates for 1977-79 and corrections for earlier years are in the July 1982 SURVEY; estimates for 1980 and corrections for earlier years are in the July 1983 SURVEY; estimates for 1981-83 are in the July 1984 SURVEY. Estimates for the periods since appear in subsequent issues of the monthly Survey of Current Business. These publications are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

For further information, write to the National Income and Wealth Division (BE-54) Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.
