Price Movements

May 1978

Summary

The Producer Price Index for Finished Goods moved up 0.7 percent from April to May on a seasonally adjusted basis. This was considerably less than the 1.3 percent advance in April and about the same as the 0.6 percent increase in March (table A). The slowdown in May was caused in large part by smaller increases for finished consumer foods. The index for other finished goods rose 0.8 percent in May. This increase was smaller than in the previous month because jewelry prices rose much less. Prices of commodities at the intermediate (semifinished) stage of processing rose about as much as in April, while prices of crude materials moved up much less than in any of the 7 preceding months.

Among finished goods, prices for finished consumer foods increased 0.5 percent in May, the smallest rise so far this year. The index for finished consumer goods excluding foods rose 0.8 percent in May (table B). Except for the 1.3

percent increase during the previous month, this was the largest advance since April 1977. The index for capital equipment increased 0.9 percent from April to May, more than in any month since last October. (The Finished Goods Price Index reflects only changes in prices received by producers for goods that are in the form in which they eventually are sold to final users. See "Brief Explanation of Producer Price Indexes," page 81.)

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.8 percent to 193.0 (1967=100). Over the year, the Finished Goods Price Index was up 7.0 percent. From May 1977 to May 1978, the finished consumer foods index was up 7.6 percent, the index for finished consumer goods excluding foods was 6.1 percent higher, and the capital equipment index rose 7.9 percent. The Producer Price Index for intermediate materials increased 5.7 percent over the year, and the crude materials was up 7.4 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods (those eventually sold to retailers) rose 0.6 percent in May, seasonally adjusted, compared with a 1.6 percent rise in April. Price increases decelerated markedly for foods. The index for consumer durables also moved up less than in the previous month, but the May advance was considerably greater than in other recent months. Prices for nondurable goods increased slightly more than in recent months.

The index for finished consumer foods moved up 0.5 percent from April to May, following increases of 1.9 percent in April and 0.8 percent in March. Prices turned down for fresh and dried fruits and vegetables, processed poultry, beef and veal, and pork after increasing in April. Prices also declined for milled rice and roasted coffee, following smaller decreases in the previous month. Prices rose less in May than in April for flour base mixes and doughs, dairy products, and miscellaneous processed foods. On the other hand, prices turned up for refined sugar in consumer-size packages and refined vegetable oils, after decreasing in April. Prices also moved up for confectionery end products and eggs following virtually no change in April.

The index for consumer durables advanced 1.2 percent in May. Although this was considerably smaller than the 2.8 percent rise in April, it was the second largest upward movement in this index since October 1974. Jewelry prices rose much less than in April, but price increases were greater in May than in the previous month for

passenger cars and tires and tubes. Prices rose less than in April for household appliances, floor coverings, household furniture, and mobile homes. Prices for home electronic equipment turned down after increasing in April.

The index for consumer nondurable goods other than foods rose 0.5 percent in May, about the same as in April. Prices turned up in May for kerosene, alcoholic beverages, and tobacco products, following declines or no change in April. Apparel and home heating oil prices rose more than in April. On the other hand, prices for gasoline edged down after increasing in April. Prices rose less in May than in the previous month for leather and rubber footwear, sanitary papers and health products, and soaps and synthetic detergents.

Capital equipment. The Producer Price Index for capital equipment rose 0.9 percent in May, somewhat faster than in recent months. Price increases accelerated markedly for motor trucks. Prices also rose more than in April for mining machinery and equipment, oilfield machinery and tools, and metal cutting machine tools. On the other hand, prices rose less than in April for railroad equipment, agricultural machinery and equipment, construction machinery and equipment, industrial process furnaces and ovens, and pumps, compressors, and equipment. Prices turned down in May after rising in the previous month for metal forming machine tools and commercial furniture.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components rose 0.6 percent, seasonally

adjusted, about the same as in April but less than in each of the first 3 months of this year. The index for intermediate materials excluding foods and feeds increased 0.5 percent in May, the same as in both April and March. Prices rose less than in April for motor vehicle parts, fabricated metal products, paper-related products, and millwork. Prices for some nonferrous metal products decreased in May for the second consecutive month, and the steel mill products index edged down following a series of price advances earlier in the year. Prices for leather and liquefied petroleum gas also declined in May. On the other hand, prices turned up in May for residual fuel oil, coke, electric power, inedible fats and oils, and plastic resins and materials. Prices rose more than in April for diesel fuel, commercial jet fuel, gypsum products, and gray fabrics.

The index for intermediate foods and feeds increased 2.6 percent from April to May, following a 0.1 percent rise in the preceding month. Prices for manufactured animal feeds and crude vegetable oils turned up after decreasing in April. On the other hand, prices for animal fats and oils and flour were lower in May, following sharp advances during the previous month. (Intermediate materials are semifinished commodities which have been processed but which require further processing before they become finished goods.)

Crude materials

The Producer Price Index for crude materials for further processing moved up 0.3 percent after seasonal adjustment

from April to May. This index had shown an average monthly rise of 2.1 percent during the previous 7 months. The index for crude foodstuffs and feedstuffs was unchanged in May, in contrast to the large advances registered during each of the first 4 months of 1978. In May, prices turned down for grains, live poultry, fresh and dried fruits and vegetables, raw cane sugar, and oilseeds, all of which had recorded higher prices during most of the earlier part of the year. Prices for hogs and cocoa beans also moved down but less than in April. On the other hand, green coffee prices rose for the first time since last November. Prices for hay, cattle, and fluid milk also rose in May.

The index for crude nonfood materials increased 0.4 percent from April to May on a seasonally adjusted basis, following a 0.9 percent rise in April and somewhat larger advances in each of the 5 months before then. The slowdown in May was caused primarily by crude fuels, as prices for coal and natural gas rose much less than in April. Among crude nonfood materials for manufacturing, prices for nonferrous scrap declined after an April increase. Wastepaper and hides and skins also moved down over the month, and iron and steel scrap quotations rose less than in April. On the other hand, prices for plant and animal fibers and crude natural rubber turned up after falling in April. (Crude materials are products entering the market for the first time which have not been manufactured or fabricated but which will be processed further before becoming intermediate or finished goods.)

Publication of revised Producer Price Indexes

Starting with this issue, revised Producer Price Indexes for the fourth month prior to the most current month will be published regularly in *Producer Prices and Price Indexes*. Producer Price Indexes are now routinely revised four months after they are first released to reflect the availability of late reports and corrections by respondents.

The following list shows the tables which include revised indexes for the various classifications of Producer Price Indexes.

The order of the columns of indexes in these tables has been rearranged. Revised indexes appear to the left and the most current month indexes appear to the right.

These tables no longer show indexes for the second month prior to the most current month.

¹ Commodities at the subproduct class (6-digit) level are assigned to stage of processing (SOP) indexes according to the amount of processing, manufacturing, or assembling to which those commodities are subjected before they enter the market. The weight of each subproduct class is allocated among the various SOP indexes in accordance with the relative proportion of output consumed at each level of processing. SOP allocations are placed within parentheses for those commodity groupings whose subproduct classes are not uniformly divided among different stage of

processing categories. Such figures indicate the weighted average allocated to a particular stage of processing category as of December 1977.

¹ Data for January 1978 have been revised to reflect the availability of late reports and corrections by respondents. All prices have been lagged one month since February 1973.

² Caution should be used in interpreting month-to-month changes, because of low response

rates from the sample of reporters which ranged from 30 to 60 percent for these particular indexes.

¹ Standard Transportation Commodity Code.

² The price index for total railroad freight also includes STCC groups not shown separately.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in

the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or in shipper costs that result from changes in services or mode.

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage of processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well

as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and non-durables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage of processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Wholesale Price Index and the Industrial Commodities Price Index

would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities WPI uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from pro-

ducing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage of processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 85 percent from the reference period in the Finished Goods Price Index, for example, is shown as 185.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$185."

A Note about Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The following example illustrates the computation of index point and percent changes. (See box.)

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index Point Change</i>	
Finished Goods Price Index	185.5
less previous index	<u>184.5</u>
equals index point change	1.0
<i>Index Percent Change</i>	
Index point change	1.0
divided by the previous index	<u>184.5</u>
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

A Note on Seasonally Adjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays.

For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.
