Price Movements

April 1979

The Producer Price Index for Finished Goods moved up 0.9 percent from March to April on a seasonally adjusted basis. This followed increases of 1.0 percent in both March and February and a 1.2 percent advance in January. Prices for intermediate (semifinished) goods rose 1.5 percent, even more than the large monthly increases registered during the first quarter. Crude material prices, however, declined slightly after rising sharply in the first 3 months of the year (table A).

Among finished goods, consumer food prices edged down in April after increasing rapidly during the 7 preceding months. On the other hand, prices for consumer goods other than foods and for capital equipment both rose more than in any month during the last year (table B).

Before seasonal adjustment, the Producer Price Index for Finished Goods rose 1.1 percent to 211.2 (1967=100). Over the year, the Finished Goods Price Index increased 10.3 percent. The finished consumer foods index was up

11.3 percent from April 1978 to April 1979, the index for finished consumer goods excluding foods rose 10.4 percent, and capital equipment prices were 9.2 percent higher than a year ago. The Producer Price Index for intermediate goods increased 10.7 percent over the year, and prices for crude materials advanced 17.1 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods (those eventually sold to retailers) increased 0.8 percent in April, after rising about 1.2 percent in each of the preceding 4 months. Prices for finished consumer foods declined from the preceding month, while prices rose more rapidly for consumer durables and consumer nondurables other than foods.

The finished consumer foods index edged down 0.3 percent, the first decrease since August 1978. Prices for pork and roasted coffee fell more than in the previous

month, fresh vegetable prices dropped sharply for the second consecutive month, and poultry prices decreased about as much as a month earlier. Prices for beef and veal, eggs, and confectionery end products increased less than in March. On the other hand, prices rose more than in the preceding month for milled rice, bakery products, and fresh fruits. Prices turned up after falling in March for vegetable oil end products and fish.

Prices for consumer nondurables other than foods rose more rapidly in April (1.7 percent) than in any other month since July 1974, when they moved up 1.9 percent. Gasoline prices advanced 4.4 percent in April, the ninth consecutive monthly increase over 1 percent. Home heating oil prices moved up 6.7 percent following a 5.3 percent rise in March. Prices also rose more than in March for apparel, over-the-counter drugs, consumer plastics, rubber footwear, and bicycles. On the other hand, prices for tires and tubes edged down for the second consecutive month after 5 months of sharply rising prices. Prices for leather footwear rose considerably less than in most recent months.

The index for consumer durables advanced 0.9 percent, somewhat more than in the 2 previous months and nearly as much as in January. The acceleration in price increases in April was due to higher prices for passenger cars. Prices for precious metal jewelry and mobile homes, however, rose less than in March.

Capital equipment. The Producer Price Index for capital equipment advanced 1.1 percent in April, much more than in March (0.6 percent) and February (0.8 percent). The faster rise in April was partly due to an upturn in prices for motor trucks, which showed no change in the previous

month. Prices for both construction and agricultural machinery rose considerably more than in most recent months. The largest increases among other capital goods occurred for industrial furnaces and ovens, pumps and compressors, mining machinery, chemical industrial machinery, and machine tools. Prices for commercial furniture moved down.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components rose 1.5 percent in April on a seasonally adjusted basis, following advances of 1.0 percent in March and 1.1 percent in both February and January. The acceleration from the already rapid rate of advance in this price index during the first quarter of the year was largely due to nonfood materials, which increased more than in any month since August 1974. Some of the largest increases were for products derived from petroleum, including fuels, plastics, and chemicals. In addition, prices for many other manufacturing and construction materials, particularly nonferrous metals, continued to climb.

The processed fuels and lubricants index rose 3.2 percent after advancing 1.9 percent in March. Accelerating price increases were recorded by residual fuel, diesel fuel, and commercial jet fuel. Prices for liquefied petroleum gas rose sharply for the second consecutive month after falling during most of 1978 and early 1979. Electric power rose about as much as in March.

The durable manufacturing materials index increased more sharply than in the previous month, largely because of continuing large rises in primary nonferrous metals,

particularly copper, nickel, aluminum, silver, zinc, and lead. Steel mill products and pig iron and ferroalloys rose more than in March. Prices for plastic components and hardwood lumber also advanced, while the jewelers' materials and findings index fell after rising throughout the first quarter.

Prices for nondurable manufacturing materials increased somewhat more than in March. The industrial chemicals index rose substantially for the fourth consecutive month; the April advance was the largest since November 1974. The largest increases within this group were for petroleum-derived basic organic chemicals. Price increases also accelerated for plastic resins and materials, woodpulp, paper, paperboard, inedible fats and oils, drugs and pharmaceutical materials, nitrogenates, and phosphates. Leather prices rose considerably less than in March. Among textile products, gray fabrics increased for the first time since November, but processed yarns and threads declined after an advance in the previous month.

Prices for construction materials continued to move up about as much as during the first 3 months of 1979. Price increases accelerated for millwork, fabricated structural metal products, and fasteners. The indexes for nonferrous wire and cable, asphalt roofing, bituminous paving materials, softwood lumber, concrete products, and structural clay products also advanced. On the other hand, prices for plastic construction products, plywood, and Portland cement were lower.

Among components for manufacturing, large price increases were recorded for motor vehicle parts, bearings, and internal combustion engines. Other intermediate non-food materials which rose rapidly in April included metal containers, paper boxes and containers, plastic packaging and shipping products, pallets and boxes, mixed fertilizers, and tractor parts.

The intermediate foods and feeds index moved up 0.9 percent in April following a smaller increase in March. Prices for animal fats and oils rose sharply after edging up slightly for 2 months. Flour prices continued to advance, while the indexes for manufactured animal feeds and confectionery materials declined.

Crude materials

The Producer Price Index for crude materials for further processing declined 0.4 percent on a seasonally adjusted basis, the first decrease since August 1977. The downturn was due to lower prices for both food and nonfood materials.

The index for crude nonfood materials moved down 0.5 percent over the month, in contrast to the 29.5 percent annual rate of increase registered in the first quarter of the year. The largest decreases in April occurred in prices for iron and steel scrap and for hides and skins, both of which had been rising substantially for several months. Coal prices moved down slightly following a moderate increase in March. Natural gas prices moved up but less than in most recent months. On the other hand, prices for crude natural rubber and nonferrous scrap rose much more than in the previous month. Higher prices were also registered for iron ore, wastepaper, and crude petroleum.

The index for crude foodstuffs and feedstuffs dropped 0.3 percent, seasonally adjusted, after a 0.2 percent rise in March and much larger increases in the first 2 months of the year. Prices were lower in April for hogs, fresh and dried vegetables, cocoa beans, live poultry, and oilseeds. In contrast, prices for wheat and corn turned up sharply after edging down in the preceding month; raw cane sugar prices also rose after a March decrease. Prices for green coffee rose about twice as much as in March. Cattle prices continued to advance, but the April increase was the smallest so far this year.

¹ Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 90 percent of total intermediate materials, and about 97 percent of total crude materials. For each commodity component of the finished goods index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to

the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

² All data are subject to revision 4 months after original publication.

³ Not seasonally adjusted.

¹ Data for December 1978 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices have been lagged 1 month since February 1973.

² Caution should be used in interpreting month-to-month changes, because of low response

rates from the sample of reporters which ranged from 30 to 60 percent for these particular indexes.

Commodity code	New specification	Old specification
02-81-01-15	Jam/preserves, cherry, 10-12 oz. jars, 12 jars to case; manufacturer to wholesaler or distributor, f.o.b. plant or delivered, dozen jars.	Jam/preserves, cherry, 10-12 oz. jars, 12 jars to case; manufacturer to wholesaler or distributor, f.o.b. destination or plant, dozen jars.
02-81-01-21	Maraschino cherries, without stems, 7 oz. to 10 oz. jars, per case (12-24 jars); packer to wholesaler or chain retail store, delivered, dozen jars.	Maraschino cherries, without stems, 8-10 oz. jar, 24 to case; packer to wholesaler or chain retailer, delivered, dozen jars.
02-82-01-01	Pickles, dill or sour, 16-32 ounce jar, per case (12-24 jars), any quantity; manufacturer to wholesaler, distributor, or chain store, f.o.b. plant or delivered, dozen jars.	Pickles, dill or sour, 16-32 oz. jar, 12-24 jars per case; manufacturer to wholesaler, f.o.b. factory or delivered, dozen jars.
02-82-01-02	Pickles, fresh cucumber, cross-cut, 14-16 oz. jars, per case (12-24 jars), any quantity; manufacturer to wholesaler, distributor, or chain retailer, f.o.b. plant or delivered, dozen jars.	Pickles, fresh cucumber, cross-cut, 14-16 oz. jars, per case (12-24 jars), any quantity; manufacturer to wholesaler, distributor, chain, or retailer, freight prepaid, or delivered, or f.o.b. plant, dozen jars.
03-15-02-17	Nylon tire yarn, 840 to 1,260 denier; manufacturer to manufacturer or spinner, 1,000 pounds or more, f.o.b. mill, freight allowed or prepaid, pound.	Nylon tire yarn, 840 denier; manufacturer to manufacturer or spinner, 1,000 pounds or more, f.o.b. mill, freight allowed or prepaid, pound.
09-14-01-01	Container board, liner, fourdrinier kraft, basis weight 42 lbs.; manufacturer to fabricator, delivered or f.o.b. shipping point with carload freight allowed, 1,000 sq. ft.	Container board, 100 lb. test liner, fourdrinier kraft, basis weight 42 lbs.; manufacturer to fabricator, delivered or f.o.b. shipping point with carload freight allowed, 1,000 sq. ft.
10-16-01-13	Charge chrome, 5.0-6.5 % carbon, 63.5-70.0 % chromium, 30% (maximum) silicon, price per pound of contained chromium, carload lots; manufacturer to industrial user, f.o.b. producing point or shipping point, pound.	Charge chrome, 5.0-6.5 % carbon, 64.0-70.0 % chromium, 3.0 % (max.) silicon, price per pound of contained chromium, carload lots; manufacturer to industrial user, f.o.b. producing point or shipping point, pound.
10-22-01-36	Antimony, 99 $\frac{1}{2}$ % per metric ton; merchant to user, f.o.b. New York, pound.	Antimony, American, 99 $\frac{1}{2}$ %, carload lots; manufacturer to user, f.o.b. Laredo, Texas, pound.
10-41-04-57	Caster, office chair, stem type, ball bearing, 2" O.D. soft rubber wheel, bright nickel finish; manufacturer to original equipment manufacturer, in quantities of 400 pieces or more, f.o.b. factory with specified freight allowance, 400.	Caster, office chair, stem type, ball bearing, 2" O.D. soft rubber wheel, bright nickel finish; manufacturer to original equipment manufacturer, in quantities of 4,000 pieces or more, f.o.b. factory with specified freight allowance, 400.

¹ Standard Transportation Commodity Code.

² The price index for total railroad freight also includes STCC groups not shown separately.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in

the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or in shipper costs that result from changes in services or mode.

Technical Note: Test Data for Producer Price Index Revision

Test data from the pilot survey for the Producer Price Index (PPI) revision have been developed for the period beginning January 1978 and are published each month in table 14, "Producer price indexes for the net output of selected industries and products," in this report. The revision is being undertaken as a comprehensive effort to make major improvements in the measurement of price changes by domestic producers of goods and services. The data now available are from a pilot survey conducted to test the methods and procedures for the comprehensive revision. The revision will be conducted on an industry-by-industry basis. The results for the first industries in the full-scale survey will be available in the fall of 1979. Coverage of all mining and manufacturing industries is scheduled for completion in 1984.

The four industries covered in the pilot survey are: Soybean oil mills (SIC 2075), newspaper printing and publishing (SIC 2711), concrete products other than block and brick (SIC 3272), and household laundry equipment (SIC 3633). These industries were selected because they offered a wide range of pricing problems on which to test the new techniques. Indexes covering some of these same industries will continue to be calculated under the old program. The new indexes will not begin replacing the old ones in the Producer Price Index until early 1980.

These pilot survey indexes differ from indexes in the current Producer Price Index in a number of important respects:

- (1) They are *industry-based* indexes. The entire output of each industry is sampled, including secondary production and miscellaneous receipts. The current Producer Price Indexes are based on a sample of major products. Even the Industry-Sector Price Indexes (ISPI's) are derived from these product indexes. The current ISPI's do not price miscellaneous receipts, and the prices for primary and secondary production are obtained from any producer of the product even if that producer does not belong to the industry. The newly published pilot survey indexes are derived from prices supplied strictly by producers within the industry. As a result, the pilot product indexes apply only to the production within the industry. After all mining and manufacturing industries are covered by the revision, product indexes will be constructed covering all production of the product.

- (2) These new indexes are classified in accordance with the *Standard Industrial Classification* (SIC) system and incorporate most features of the Census of Manufactures product code extensions of the SIC. The coding will make the data easier to use in conjunction with other industry-oriented economic data.
- (3) *Net output values of shipments* are used as weights in preparing the index. Net output values refer to the value of shipments leaving the industry. In contrast, the weights used in the current PPI's and ISPI's are gross shipment values, which include shipments *within* an industry. The resulting multiple counting of price changes is one of the major defects of the current indexes. The current stage-of-processing indexes partially correct this defect, but the new indexes consistently correct it at all levels.
- (4) Increased emphasis is being given to obtaining actual *transaction prices at the time of shipment*. Although it has been a general objective of the current program to obtain transaction prices, they have not been obtained for significant portions of the index. In addition, some products in the current PPI intentionally have been priced at order prices rather than shipment prices.
- (5) *Probability sampling* was used to select the firms to be asked to report prices. As a result, firms of all sizes are included in the sample. In addition, within the firm, the individual items to be priced and the terms of the transaction were chosen using probability techniques. In the current PPI, major companies selected on a judgment basis are asked to report prices for volume-selling items under "typical" transaction terms.

Since this is a pilot survey, a number of changes will be introduced as the full-scale survey is put in place. These changes include the following:

- (1) Greater product detail will generally be available because of larger sample sizes and increased capabilities to combine product areas that are not publishable by themselves. The 5-digit product class indexes, which cannot now be calculated, will be produced.
- (2) Ultimately, the survey will cover all shipments by all 493 industries in mining and manufacturing. The present PPI's cover only about 50 percent of

this value; the pilot survey covers about 2 percent of it.

- (3) Improved calculation techniques will be introduced, including the use of Census of Manufactures shipment data to weight the 7-digit product indexes to higher levels. The pilot indexes rely on the estimated relative importance of products based on shipment data derived from the survey itself.

- (4) Estimates of sampling error will be published.

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage of processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished

goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage of processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Re-

spondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage of processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 85 percent from the reference period in the Finished Goods Price Index, for example, is shown as 185.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$185."

A Note about Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The following example illustrates the computation of index point and percent changes. (See box.)

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index Point Change</i>	
Finished Goods Price Index	185.5
less previous index	<u>184.5</u>
equals index point change	1.0
<i>Index Percent Change</i>	
Index point change	1.0
divided by the previous index	<u>184.5</u>
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

A Note on Seasonally Adjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.
