Producer Prices and Price Indexes

Data for September 1979

Price Changes

The Government Printing Office has announced higher prices for *Producer Prices and Price Indexes*, effective in November 1979. The subscription price has increased 6 percent, from \$16 to \$17 a year within the United States; the single copy price has increased 25 percent, from \$1.80 to \$2.25.

Prices of U.S. Government publications are set by the Government Printing Office, an agency of the U.S. Congress, under authority of Title 44 of the U.S. Code. This statute does not give publishing agencies, like the Bureau of Labor Statistics, a voice in setting prices of the publications they publish.

Price Movements September 1979

Summary

The Producer Price Index for Finished Goods moved up 1.4 percent from August to September on a seasonally adjusted basis. During the third quarter this index advanced at a seasonally adjusted annual rate of 15.7 percent, compared with a 6.8 percent rate in the previous 3 months and a 14.3 percent rate in the first quarter of the year. Prices for intermediate (semifinished) goods continued to rise at a rapid pace (1.5 percent). Crude material prices rose 2.1 percent, substantially more than in recent months (table A).

Among finished goods, the index for finished energy goods climbed 6.8 percent, even more than the 6.2 and 5.8 percent advances in July and August, respectively. (The September index for finished energy goods largely reflects August prices because most prices are lagged 1 month.) Consumer food prices rose 1.8 percent, following a 1.2 percent increase in August and no change in July. The

index for finished consumer goods less food and energy, however, rose slightly less (0.7 percent) than in either of the 2 preceding months, and, for the second consecutive month, capital equipment prices rose much less than in any of the first 7 months of the year (table B).

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 1.4 percent to 220.4 (1967=100). Over the year, the Finished Goods Price Index increased 11.8 percent. The finished energy goods index was up 55.9 percent from September 1978 to September 1979, the finished consumer foods index rose 8.8 percent, the index for finished consumer goods other than food and energy was 8.4 percent higher than a year ago, and capital equipment prices were up 8.3 percent. The Producer Price Index for intermediate goods increased 14.6 percent over the year, and prices for crude materials advanced 17.6 percent.

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods (those eventually sold to retailers) rose 1.8 percent from August to September on a seasonally adjusted basis, after rising 1.6 percent a month earlier. During the third quarter, these prices rose at an annual rate of 20.3 percent, compared with a 6.1 percent annual rate in the second quarter and a 16.0 percent annual rate in the first quarter.

The finished consumer foods index rose 1.8 percent in September, after increasing 1.2 percent in August. This index rose sharply in the first quarter, declined in the second quarter, and turned up again in the quarter ended in September. Beef and veal prices rose sharply in September following 4 months of decline, and prices for pork rose for the second consecutive month following 5 consecutive decreases. Large increases were also recorded for milled rice, roasted coffee, processed poultry, and bakery products. Prices declined sharply for fresh and dried fruits and vegetables, which had advanced rapidly in the previous month.

The index for consumer nondurables other than foods advanced 2.5 percent in September, about the same as in August. For the quarter ending in September, this index rose at a seasonally adjusted annual rate of 34.0 percent, the steepest rise since early 1974. As in most months this year, the September rise was due in large part to sharp advances for finished energy goods. Since December 1978, prices for home heating oil and gasoline increased at sea-

sonally adjusted annual rates of 92.1 and 62.1 percent, respectively. Large price increases were also registered in September for tires and tubes, disposable plastic dinnerware, soaps and synthetic detergents, textile housefurnishings, nonalcoholic beverages, and pharmaceutical preparations. On the other hand, rubber footwear prices dropped for the first time this year, and leather footwear prices rose much less than in recent months.

The index for consumer durables rose 0.7 percent in September, compared with a 0.5 percent rise in August. During the third quarter this index moved up a 9.2 percent seasonally adjusted annual rate, about the same as in the first half of the year. Passenger car prices declined for the second consecutive month; however, these decreases were more than offset by increases for precious metal jewelry, household flatware, sporting and athletic goods, and mobile homes.

Capital equipment. The index for capital equipment increased 0.3 in September, slightly more than in August (0.1 percent). Prices for capital equipment rose at a 4.9 percent annual rate in the third quarter, the smallest quarterly increase in 6 years. In September, prices for photographic equipment, machine tools, generators and generator sets, agricultural machinery, and industrial process furnaces and ovens advanced rapidly; however, lower prices for light trucks caused the motor trucks index to decline for the third consecutive month, and light utility aircraft prices turned down for the first time this year.

Intermediate materials

The Producer Price Index for intermediate materials, supplies, and components advanced 1.5 percent seasonally adjusted in September, following increases of 1.2 percent in August and 1.9 percent in July. Durable manufacturing materials and construction materials rose much more than in August, while the rapid energy price increases of recent months moderated somewhat.

The durable manufacturing materials category advanced 1.6 percent, more than twice as much as in August. The September acceleration was primarily caused by steep increases for precious metals and jeweler's materials and findings (up 23.5 and 12.4 percent, respectively). Advances were also registered for copper, tin, aluminum, foundry and forge shop products, and laminated plastic sheets.

The construction materials and components index also rose more than twice as much as in August (1.1 vs. 0.5 percent). Prices for plywood, asphalt roofing, and bituminous paving materials turned up sharply after falling in August. Prices also rose for softwood lumber, nonferrous wire and cable, heating equipment, wiring devices, building paper and board, concrete products, and gypsum products. Refractories prices were lower, however.

The processed fuels and lubricants index increased 4.4 percent, following a 5.2 percent rise in August. This slowdown was due to smaller advances for residual fuel, commercial jet fuel, and electric power. However, prices continued to climb rapidly for diesel fuel, liquefied petroleum gas, and lubricating oil materials.

The nondurable manufacturing materials index rose 1.2 percent, the same as in the previous month. Accelerating price increases were registered for synthetic fibers, processed yarns and threads, paint materials, nitrogenates, and phosphates. On the other hand, synthetic rubber prices moved up slightly following 5 months of much larger increases. Prices for industrial chemicals and paperboard also advanced less than in August. Leather prices declined 10 percent, and inedible fats and oils turned down after an August advance.

Prices for a number of other intermediate nonfood nonenergy items increased, including rubber products,

internal combustion engines, electronic components and accessories, refrigerant compressors, and mixed fertilizers. In contrast, parts for metal forming machining tools turned down.

The intermediate foods and feeds index moved up 0.8 percent, following a drop in August and a sharp increase in July. Prices for crude vegetable oils advanced, but flour and confectionery materials prices declined.

Crude materials

The Producer Price Index for crude materials for further processing rose 2.1 percent on a seasonally adjusted basis, following a 0.1 percent upward movement in the preceding month. The acceleration was largely due to sharper increases for crude energy materials and an upturn in prices of crude foodstuffs. The index for crude energy materials advanced 4.7 percent over the month, following increases of 2.6 and 2.7 percent in July and August, respectively. A steep rise in the crude petroleum index (up 9.4 percent) caused most of the acceleration in September. Natural gas prices rose somewhat more than in most recent months.

The index for crude foodstuffs and feedstuffs increased 1.5 percent, in contrast to a 0.2 percent decline in August. Hog prices climbed nearly 10 percent, following several months of decreases. Cattle prices turned up sharply after falling in each of the 4 previous months. Fluid milk prices also rose after declining in August. Soybean prices rose but less than in the preceding month. Live poultry prices turned down after rising in August. Wheat, green coffee, and cocoa bean prices also fell but much less than in the previous month.

Among other crude materials, prices for copper base scrap advanced sharply following 2 months of smaller increases. Higher prices were also registered for potash, cotton, and sand, gravel, and crushed stone. On the other hand, prices for hides and skins and aluminum base scrap fell steeply. Natural rubber prices turned down after a small August increase, and leaf tobacco and wastepaper prices dropped for the second consecutive month.

¹ Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 87 percent of total finished goods, about 90 percent of total intermediate materials, and about 87 percent of total crude materials. For each commodity component of the finished goods index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figures shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

² All data are subject to revision 4 months after original publication.

¹ Data for May 1979 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices since February 1973 have a one month lag.
² Caution should be used in interpreting month to month changes, because of low

response rates from the sample of reporters which ranged from 30 to 60 percent for these particular indexes.

¹ These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 6). The weights are those used for the comprehensive All Commodities Index.

² Data for May 1978 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-51, 02-62, and 02-9

Processed foods: 02 less 02-9, 02-61, and 02-62

Industrial commodities, less fuels and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-06, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-37-02-42, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-02-12, 03-83-03-22, 12-31, 03-82-01-02, 03-82-01-32, 03-82-01-33, 03-82-01-52, 03-83-03-42

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-74, 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-78, and 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 07-11-02 and 06 less 06-4

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-08, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-28-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Abrasive grinding wheels: 11-36-11, 11-36-12, 11-36-13, 11-36-14, 11-36-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

Technical Note: Test Data for Producer Price Index Revision

Test data from the pilot survey for the Producer Price Index (PPI) revision have been developed for the period beginning January 1978 and are published each month in table 14, "Producer price indexes for the net output of selected industries and products, in this report. The revision is being undertaken as a comprehensive effort to make major improvements in the measurement of price changes by domestic producers of goods and services. The data now available are from a pilot survey conducted to test the methods and procedures for the comprehensive revision. The revision will be conducted on an industry-by-industry basis. The results for the first industries in the full-scale survey will be available in the fall of 1979. Coverage of all mining and manufacturing industries is scheduled for completion in 1984.

The four industries covered in the pilot survey are: Soybean oil mills (SIC 2075), newspaper printing and publishing (SIC 2711), concrete products other than block and brick (SIC 3272), and household laundry equipment (SIC 3633). These industries were selected because they offered a wide range of pricing problems on which to test the new techniques. Indexes covering some of these same industries will continue to be calculated under the old program. The new indexes will not begin replacing the old ones in the Producer Price Index until early 1980.

These pilot survey indexes differ from indexes in the current Producer Price Index in a number of important respects:

- (1) They are *industry-based* indexes. The entire output of each industry is sampled, including secondary production and miscellaneous receipts. The current Producer Price Indexes are based on a sample of major products. Even the Industry-Sector Price Indexes (ISPI's) are derived from these product indexes. The current ISPI's do not price miscellaneous receipts, and the prices for primary and secondary production are obtained from any producer of the product even if that producer does not belong to the industry. The newly published pilot survey indexes are derived from prices supplied strictly by producers within the industry. As a result, the pilot product indexes apply only to the production within the industry. After all mining and manufacturing industries are covered by the revision, product indexes will be constructed covering all production of the product.

- (2) These new indexes are classified in accordance with the *Standard Industrial Classification* (SIC) system and incorporate most features of the Census of Manufactures product code extensions of the SIC. The coding will make the data easier to use in conjunction with other industry-oriented economic data.
- (3) *Net output values of shipments* are used as weights in preparing the index. Net output values refer to the value of shipments leaving the industry. In contrast, the weights used in the current PPI's and ISPI's are gross shipment values, which include shipments *within* an industry. The resulting multiple counting of price changes is one of the major defects of the current indexes. The current stage-of-processing indexes partially correct this defect, but the new indexes consistently correct it at all levels.
- (4) Increased emphasis is being given to obtaining actual *transaction prices at the time of shipment*. Although it has been a general objective of the current program to obtain transaction prices, they have not been obtained for significant portions of the index. In addition, some products in the current PPI intentionally have been priced at order prices rather than shipment prices.
- (5) *Probability sampling* was used to select the firms to be asked to report prices. As a result, firms of all sizes are included in the sample. In addition, within the firm, the individual items to be priced and the terms of the transaction were chosen using probability techniques. In the current PPI, major companies selected on a judgment basis are asked to report prices for volume-selling items under "typical" transaction terms.

Since this is a pilot survey, a number of changes will be introduced as the full-scale survey is put in place. These changes include the following:

- (1) Greater product detail will generally be available because of larger sample sizes and increased capabilities to combine product areas that are not publishable by themselves. The 5-digit product class indexes, which cannot now be calculated, will be produced.
- (2) Ultimately, the survey will cover all shipments by all 493 industries in mining and manufacturing. The present PPI's cover only about 50 percent of

this value; the pilot survey covers about 2 percent of it.

- (3) Improved calculation techniques will be introduced, including the use of Census of Manufactures shipment data to weight the 7-digit product indexes to higher levels. The pilot indexes rely on the estimated relative importance of products based on shipment data derived from the survey itself.

- (4) Estimates of sampling error will be published.

Early, in the April 1978 issue of the *Monthly Labor Review*. Reprints are available from the Bureau of Labor Statistics upon request.

Brief Explanation of Producer Price Indexes

Producer Price Indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer Price Indexes can be organized by stage of processing or by commodity. The stage of processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished

goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage of processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating Producer Price Indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Re-

spondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base Producer Price Indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating Producer Price Indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage of processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 85 percent from the reference period in the Finished Goods Price Index, for example, is shown as 185.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$185."

A Note about Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box below shows the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

<i>Index Point Change</i>	
Finished Goods Price Index	185.5
less previous index	<u>184.5</u>
equals index point change	1.0
<i>Index Percent Change</i>	
Index point change	1.0
divided by the previous index	<u>184.5</u>
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

A Note on Seasonally Adjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

24 Hour CPI Mailgram Service

Consumer Price Index data now are available by mailgram within 24 hours of the CPI release. The new service is being offered by the Bureau of Labor Statistics through the National Technical Information Service of the U.S. Department of Commerce.

The CPI MAILGRAM service provides unadjusted and seasonally adjusted data both for the All Urban Consumers

(CPI-U) and for the Urban Wage Earners and Clerical Workers (CPI-W) Indexes as shown on the CPI-U sample page below. The unadjusted data include the current month's index and the percent changes from 12 months ago and one month ago. The seasonally adjusted data are the percent changes from one month ago.
