*Producer Price Indexes* is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

Annual subscription price:  
\$21 a year domestic (includes  
supplement)  
\$5.25 additional foreign

Single copy \$8.50; foreign \$10.63  
Supplement \$13; foreign \$16.25

Material in this publication is in the public domain and, with appropriate credit, may be reproduced without permission. Second-class postage paid at Washington, DC and at additional mailing offices.

# Price Movements

## March 1987

The Producer Price Index for Finished Goods moved up 0.4 percent seasonally adjusted from February to March. The size of the March increase placed it between the January advance of 0.6 percent and the February rise of 0.1 percent. Prices received by producers of intermediate goods increased 0.3 percent over the month following larger climbs of 0.9 and 0.5 percent in January and February. Prices for crude goods edged up 0.1 percent, far less than in either of the 2 previous months. (See table A.)

Among finished goods, consumer food prices turned up after four consecutive monthly declines. The index for energy goods decreased marginally following substantially higher prices in January and February. The climb in the index for consumer goods other than foods and energy was considerably larger than in most other recent months, but capital equipment prices inched up very little.

Before seasonal adjustment, the Producer Price Index for Finished Goods was unchanged in March at 292.3 (1967=100).

During the 12 months ended in March 1987, the Finished Goods Price Index rose 1.5 percent. Over the same time period, consumer food prices increased 3.2 percent, the index for energy goods dropped 10.9 percent, prices for consumer goods other than foods and energy moved up 2.6 percent, and the capital equipment index rose 2.0 percent.

The intermediate goods price index was virtually the same in March 1987 as it had been a year earlier, while the crude materials index was 2.3 percent higher than its March 1986 level.

### Finished goods

*Finished consumer goods.* The Producer Price Index for finished consumer goods increased 0.5 percent seasonally adjusted in March after moving up 0.2 percent in February. Following a decline of 0.5 percent the month earlier, the index for consumer foods turned up 0.5 percent in March. Prices rose after falling in February for fresh vegetables, pork, and bakery products. Price increases accelerated for fresh fruits and processed fruits and vegetables. Prices fell but less than in the previous month for roasted coffee and processed poultry. Prices turned down after rising in February for fish and eggs. Prices for shortening and cooking oils also declined following no change a month earlier. Beef and veal prices inched up 0.2 percent after advancing 2.3 percent in the previous month; soft drink prices also rose.

The index for finished energy goods inched down 0.2 percent after advancing nearly 10 percent in January and 4.0 percent in February. The natural gas index turned down 1.5 percent in March, and prices for gasoline and home heating

<sup>1</sup> Data for November 1986 have been revised to reflect the availability of late reports and corrections by respondents. For this

reason, some of the figures shown above and elsewhere in this report may differ from those previously reported.

oil moved up only marginally.

The index for consumer goods less foods and energy moved up 0.8 percent after seasonal adjustment following a 0.3-percent drop the month earlier. Prices rose after falling in February for women's apparel, home electronic equipment, footwear, and gold jewelry. Prices for cosmetics and pharmaceutical preparations rose considerably, after little or no change in the previous month. Prices for furniture, textile housefurnishings, and book publishing also climbed. Prices for passenger cars and light trucks fell but less than in February. Prices turned down after rising in the previous month for glassware and floor coverings.

**Capital equipment.** The Producer Price Index for capital equipment edged up 0.1 percent in March after decreasing 0.3 percent in February. Modest increases for several categories more than offset declines for motor vehicles.

### Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components moved up 0.3 percent on a seasonally adjusted basis in March, following increases of 0.9 percent in January and 0.5 percent in February. A downturn in energy prices was responsible for the slowdown, although substantial advances were noted in several other areas.

In the wake of sharp increases in January and February, the intermediate energy index declined 0.7 percent. Diesel fuel prices dropped about 6 percent, while residual fuel moved down almost 3 percent. Electric power rates continued to decline modestly, and prices for jet fuel increased far less than in other recent months. In contrast, prices rose sharply for butane, coke, and other petroleum and coal products.

The intermediate goods less energy index rose 0.5 percent, compared with the 0.2-percent increase registered in the previous month. This acceleration was most noticeable in the nondurable manufacturing materials category, as substantial advances took place for industrial chemicals, plastic resins, and woodpulp. Prices fell, however, for paper and inedible fats and oils. Among durable manufacturing materials, prices rose sharply for copper and aluminum, but Portland cement prices turned down.

Several items in the construction materials and components category advanced in March. These included fabricated structural metal products (prefabricated buildings in particular), switchgear and switchboards, millwork, plywood, and heating equipment. On the other hand, gypsum products fell much more than in other recent months.

Considerable activity was observed within the components for manufacturing category (up 0.3 percent), which is normally quite stable. Prices advanced sharply for motor vehicle parts, turbine parts, and aircraft engines and engine parts; decreases occurred, however, for integrated electronic circuits and internal combustion engine parts. Among other intermediate goods, prices continued to move up for paper boxes and containers, while declines were noted for unsupported plastic film and animal feeds.

### Crude goods

Following an advance of 1.8 percent in February, the Producer Price Index for Crude Materials for Further Processing inched up 0.1 percent in March, seasonally adjusted. Energy prices turned down after rising in January and February, while prices for many foodstuffs and other items either showed upturns following earlier decreases or continued to advance. The crude energy materials index decreased 0.9 percent after rising 2.6 percent in February.

Crude petroleum prices eased slightly, following 2 months of substantial advances, and the index for natural gas also turned down after moving up during the 2 preceding months. Coal prices continued to decline modestly.

The index for crude nonfood materials other than energy moved down 0.9 percent after showing no change in February. (The Bureau of Labor Statistics has revised seasonally adjusted data for this series for several recent months. See footnote 10 of table 1.) Ferrous scrap, raw cotton, and lead and zinc ore prices dropped more rapidly than in February. Price advances for logs and timber, construction sand and gravel, and leaf tobacco were considerably smaller than the month earlier. In contrast, aluminum base scrap prices rose after declining in the preceding month. Cattle hides and wastepaper prices increased even more than in other recent months, and the index for copper base scrap showed a smaller decline than in February.

The crude foodstuffs and feedstuffs index rose 0.4 percent after showing no change in February. Prices turned up for fresh vegetables and lambs following sharp decreases in the previous month. Fresh fruit prices rose much faster than in February, while decreases slowed for corn and chickens. Price advances slowed, however, for livestock, turkeys, hay, and wheat. Unprocessed fish prices turned down, and prices for fluid milk and soybeans fell more than they had in February.

## **Net output price indexes for major industry groups**

The Producer Price Index for the net output of the domestic manufacturing sector edged up 0.1 percent from February to March after considerably larger advances (0.8 and 0.4 percent) in both January and February. Prices received for the net output of the petroleum refining industry group fell 1.2 percent in March, in contrast with the sharp increases in each of the 2 preceding months. In addition, the index for the paper industry group rose much less than the month before. However, prices for the apparel and the leather products industry groups moved up more than in other recent months, and indexes for both the chemicals industry group and the lumber and wood products industry group continued to climb substantially. The transportation equipment group decreased but far less than in February. During the 12 months ended in March 1987, the index for the net output of the domestic manufacturing sector increased 1.2 percent.

After rising rapidly in each of the first 2 months of 1987, the Producer Price Index for the net output of the domestic mining sector dropped 0.8 percent in March; these movements have been led by the oil and gas extraction industry group. The index for the metal mining industry group declined even more in March than it had a month earlier. The total mining industries index moved down 10.2 percent between March 1986 and March 1987.

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December.

<sup>2</sup> Data for November 1986 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Includes crude petroleum.

<sup>5</sup> Excludes crude petroleum.

<sup>6</sup> Percent of total finished goods.

<sup>7</sup> Percent of total intermediate materials.

<sup>8</sup> Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

<sup>9</sup> Percent of total crude materials.

<sup>10</sup> Seasonal adjustment procedures for these series have been revised. In the past these series were adjusted by an aggregation method, but they are now adjusted directly. As a result, previously published percent changes for these series for January and February have changed. PPI seasonal adjustment methodology continues to be evaluated; any further changes will be announced in advance.

**Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing**

(1967 = 100 unless otherwise indicated)

<sup>1</sup> Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly-titled indexes which are derived from traditional commodity groupings shown in table 6.

<sup>2</sup> Data for November 1986 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>3</sup> Not available.

Table 5. Producer price indexes for the net output of selected industries and their products

<sup>1</sup> These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

<sup>2</sup> Data for November 1986 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810168, 03810169, 03810272, 03810274, 03810298, 03810364, 03820134, 03820303, 03830323, 03830324, 03830325 and 1231 03810273, 03810363, 03810364, and 03810365

Hosiery: 03810168, 03810169, 03810171, 03810272,

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Lumber and plywood<sup>3</sup>: 081 and 083

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 10-3 through 10-8

Copper and copper products: 10220123, 10220162, 102301, 10240301, 10240302, 10240304, 10240305, 102502, 10260315, 10260316, 10260317, 10260319, 10260325, 10280301, 10280302, and 10280303

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 11115211 and 111251

Metalworking machinery: 113A, 1132, 113304, 1137, and 1138

Total tractors: 1111 and 1128 less 11115211, 112802, and 112803

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 11115211 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 11115211

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 082, 083, 08490105, 086, 092, 101502, 10170399, 10170499, 10170611, 10170627, 10250103, 10250104, 10250121, 10250123, 10250155, 10250254, 10260307, 104101, 105, 106, 1071, 10730101, 10730109, 10730145, 10730146, 10730164, 10730165, 107402, 107403, 107404, 10740501, 10740781, 10740791, 10810246, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10880211, 10880213, 10880721, 10880961, 10890566, 1142, 1147, 11490205, 11710109, 11710111, 11710112, 11710113, 11710115, 11710116, 11710117, 11710118, 11710119, 11710121, 11710266, 11710267, 11710272, 11710273, 11710274, 11710282, 123101, 1232, 131105, 132, 133, 134, 136, 137, 1392, 1393, 1394, and 139501

<sup>3</sup> Formerly entitled: Lumber and wood products, excluding millwork

1/ The figure shown for each item is its value weight expressed as a proportion of the total value weight for the U.S. Postal Service Index.

2/ Data for Nov. 1986 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

3/ Postal service prices contained in the Consumer Price Index are from first class and fourth class mail.

1/ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy, excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190 of the July 1986 issue of Producer Price Indexes.

2/ All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

# Technical Notes

## Brief Explanation of Producer Price Indexes

Producer price indexes (PPI) measure average changes in prices received by domestic producers of commodities in all stages of processing. Most of the information used in calculating the indexes is obtained through the systematic sampling of nearly every industry in the manufacturing and mining sectors of the economy. The PPI program also includes some information from other sectors—agriculture, fishing, forestry, services, and gas and electricity. Because producer price indexes are designed to measure only the change in prices received for the output of domestic industries, imports are not included. The sample currently contains about 3,100 commodities and 75,000 quotations per month.

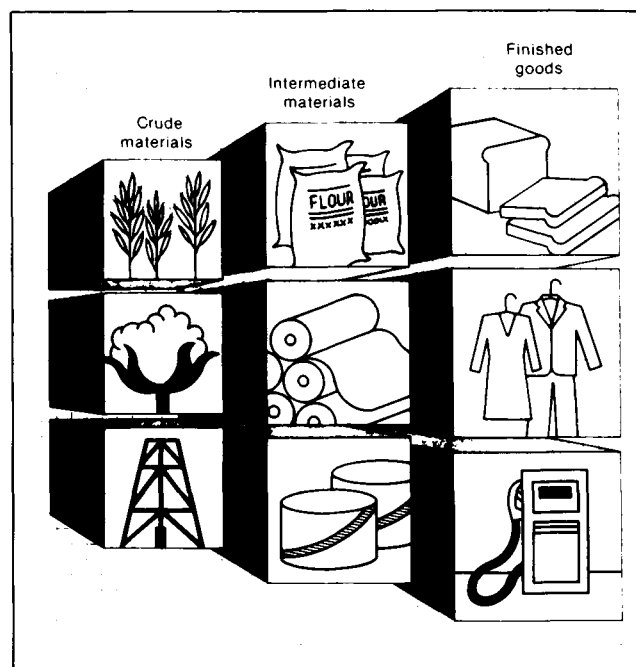

There are three primary systems of indexes within the PPI program: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure (table 1) organizes products by class of buyer and degree of fabrication. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products (table 5). The commodity structure (table 6) organizes products by similarity of end-use or material composition.

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or a business firm. Consumer foods include unprocessed foods, such as eggs and fresh vegetables, as well as processed foods, such as bakery products and meats. Other finished consumer goods include durable goods, such as automobiles, household furniture, and appliances, and nondurable goods, such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses items that are physically complete but that are purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC) and the Census product code extensions of the SIC. Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 4 lists indexes for the net output of major mining and manufacturing industry groups at the 2-digit level. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Industries may be represented by one to three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by

establishments classified in the industry for products made primarily, but not always exclusively, within the industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, some industries also may have secondary product indexes that show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from the sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movements in the latter indexes are calculated on the basis of the movements of their counterparts in table 5. Although most such indexes continue to be published in table 6 on their original base period of 1967=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction. Even though index levels for corresponding items may differ, monthly percent changes will be identical. (See "Calculating Index Changes," below.)

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported monthly by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are always provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently cor-

rect this weakness at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends. Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings, currently reflect 1982 values of shipments as reported in the Census of Manufactures and other sources. From January 1976 through December 1986, PPI weights were derived from 1972 shipment values. Industry indexes, which are based on the SIC system, continue to be calculated with 1977 net output weights.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 7, "Producer Prices," in *BLS Handbook of Methods* (1982), Bulletin 2134-1. Reprints are available from the Bureau of Labor Statistics on request (202 523-1221).

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

| <i>Index Point Change</i>   |             |
|-----------------------------|-------------|
| Finished Goods Price Index  | 288.5       |
| Less previous index         | 285.0       |
| Equals index point change   | 3.5         |
| <i>Index Percent Change</i> |             |
| Index point change          | 3.5         |
| Divided by previous index   | 285.0       |
| Equals                      | 0.012       |
| Result multiplied by 100    | 0.012 x 100 |
| Equals index percent change | 1.2         |

Percent changes for 3-month and 6-month periods can be expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the rate for a given 3- or 6-month span were maintained for a 12-month period.

Each index measures price changes from a reference period which equals 100.0 (1967 or some later period). An increase of 188.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 288.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1967 to \$288.50 today." Likewise, a current index of 300.0 would indicate that prices received by producers of finished goods today are triple what they were in 1967.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

Seasonally adjusted data usually are preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. Seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchase agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 570, available on request from BLS.)

Seasonal factors used in computing seasonally adjusted indexes are derived by the X-11 Seasonal Adjustment Method. Annual updates replace the most recent 5 years of seasonal data, e.g., data from January 1981 through December 1985 were replaced at the beginning of 1986. Indexes for most broad commodity groupings

and 8-digit individual commodities in table 6, as well as industry and Census product indexes in tables 4 and 5, do not undergo the seasonal adjustment process and, therefore, are published only as unadjusted data.

Some indexes are adjusted directly, independently of the seasonal movements of other more detailed series comprising the category in question. This is the case for all indexes in table 6 which are adjusted, as well as for certain basic stage-of-processing categories in table 1. Seasonal movements for most stage-of-processing indexes are derived indirectly by the aggregative method, which combines seasonal movements from the basic stage-of-processing categories and from a wide variety of food subproduct class (6-digit level) series.

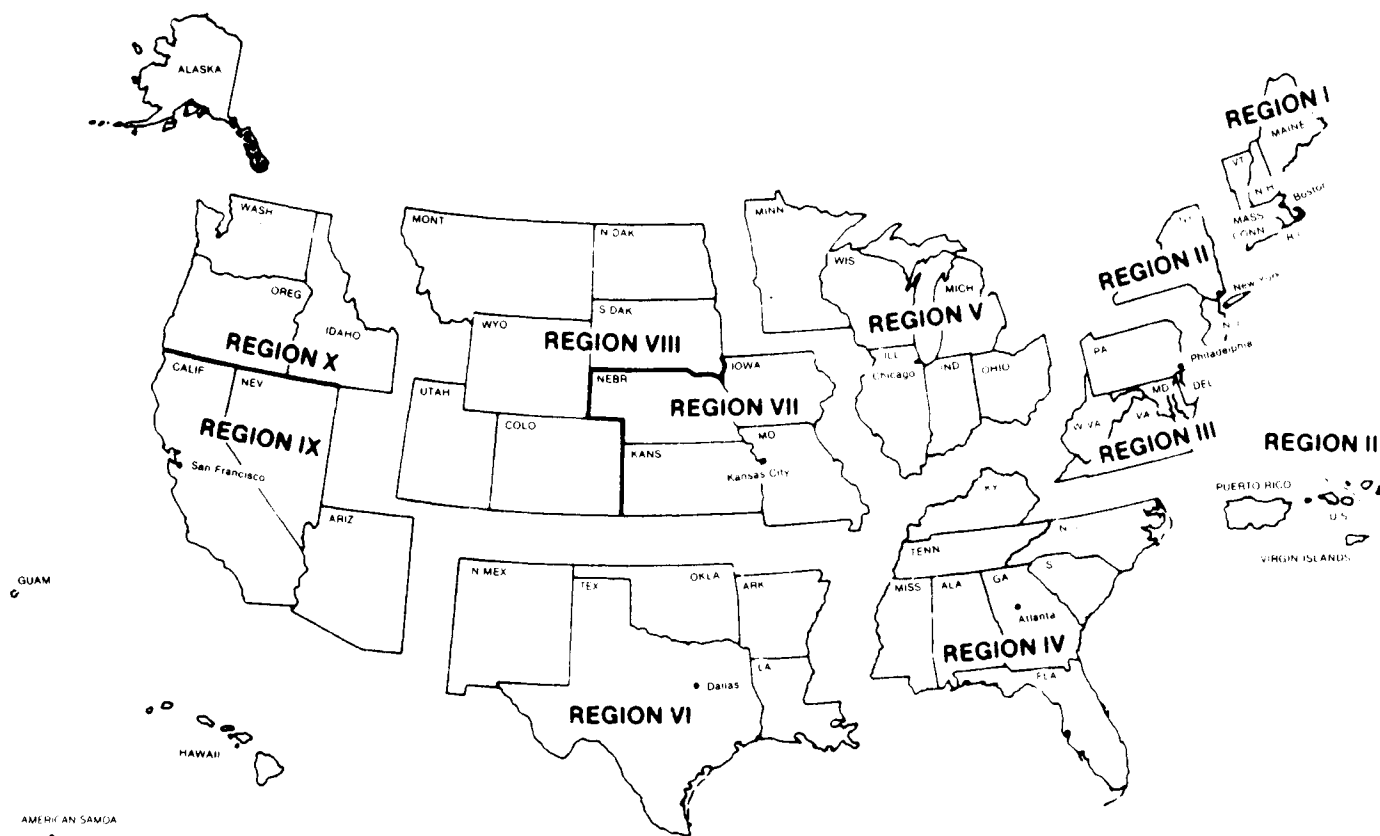

Direct seasonal adjustment produces a more complete elimination of seasonal movements than the aggregative method does. However, the direct seasonal adjustment process does not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonally adjusted data can also become problematic when previously stable and predictable timing patterns of pricing behavior abruptly change. If the new timing pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will be chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

For more information, see "Appendix A: Seasonal Adjustment Methodology at BLS" in the *BLS Handbook of Methods*, (1982), Bulletin 2134-1.

## Regional Offices

---

### Region I

John F. Kennedy Federal Building  
Suite 1603  
Boston, Mass. 02203  
Phone: (617) 565-2327

### Region II

Suite 3400  
1515 Broadway  
New York, N.Y. 10036  
Phone: (212) 944-3121

### Region III

3535 Market Street  
P.O. Box 13309  
Philadelphia, Pa. 19101  
Phone: (215) 596-1154

### Region IV

1371 Peachtree Street, N.E.  
Atlanta, Ga. 30367  
Phone: (404) 347-4418

### Region V

9th Floor  
Federal Office Building  
230 S. Dearborn Street  
Chicago, Ill. 60604  
Phone: (312) 353-1880

### Region VI

Federal Building  
525 Griffin St., Rm. 221  
Dallas, Tex. 75202  
Phone: (214) 767-6971

### Regions VII and VIII

911 Walnut Street  
Kansas City, Mo. 64106  
Phone: (816) 374-2481

### Regions IX and X

450 Golden Gate Avenue  
Box 36017  
San Francisco, Calif. 94102  
Phone: (415) 556-4678
