# Price Movements

## November 1984

The Producer Price Index for Finished Goods climbed 0.5 percent from October to November after seasonal adjustment. This followed 2 months of small declines and marked a return to the rate that prevailed in early 1984. Prices received by producers of intermediate goods rose 0.3 percent, after inching up 0.1 percent a month before. Crude material prices increased 2.0 percent, following decreases in 6 of the 7 preceding months. (See table A.)

The November upturn in the Finished Goods Price Index was due in part to rises for food and capital equipment. Consumer food prices advanced 0.7 percent, after dropping in September and edging up slightly in October. Capital equipment prices turned up slightly in the wake of a relatively large drop a month earlier. The 0.5 percent increase in the index for finished consumer goods other than foods and energy followed a decrease of the same size in October. The passenger car index increased 0.4 percent after declining 1.2 percent in October. The finished energy goods index rose again in November, but by less than in October.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 0.2 percent to 292.3 (1967=100). From November 1983 to November 1984,

the Finished Goods Price Index rose 1.9 percent. Over the 12 months ended in November 1984, prices received by producers of consumer foods climbed 4.0 percent, the index for finished energy goods fell 3.9 percent, finished consumer goods other than foods and energy advanced 2.2 percent, and prices for capital equipment also moved up 2.2 percent. The index for intermediate goods increased 1.6 percent over the year, while crude material prices were only fractionally lower than in November 1983.

### Finished goods

*Finished consumer goods.* After showing no change in October, the Producer Price Index for finished consumer goods rose 0.6 percent on a seasonally adjusted basis. The index for finished consumer foods increased 0.7 percent in November, after edging up 0.1 percent a month earlier. Prices turned up sharply for beef and veal and pork, following declines in previous months. Prices also rose for processed poultry and for shortening and cooking oils while they declined markedly for eggs, fresh fruits, and fresh vegetables. Decreases were also registered for processed fruits and vegetables, soft drinks, cereals, and milled rice.

<sup>1</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. For this reason, some of

the figures shown above and elsewhere in this report may differ from those previously reported.

The index for finished energy goods advanced 0.6 percent, after a rise of 1.5 percent in October. Prices for gasoline and home heating oil continued to move up, but less than they did a month earlier. Natural gas prices fell for the third consecutive month.

Following a decline of 0.5 percent in October, the index for finished consumer goods other than foods and energy turned up 0.5 percent, partly because of price increases for a few models which were introduced later than usual this year. Prices also turned up after falling a month earlier for apparel, home electronic equipment, gold jewelry, rubber footwear, and mobile homes; flatware prices advanced 6.0 percent, following no change in October. Prices rose more than they did a month earlier for prescription drugs, sanitary papers, electric lamps and bulbs, and cutlery, but turned down after increasing in October for some other consumer goods such as leather footwear, floor coverings, textile housefurnishings, and over-the-counter drugs.

**Capital equipment.** The Producer Price Index for capital equipment moved up 0.2 percent, following a 0.6 percent drop in October. Prices turned up after falling in the previous month for motor vehicles, commercial furniture, and integrating and measuring instruments. The index for construction machinery and equipment moved up after posting no change in October, and prices increased much more than in the previous month for pumps and compressors and for industrial process furnaces and ovens. The index for agricultural machinery and equipment declined after showing no change a month earlier.

### Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components rose 0.3 percent from Octo-

ber to November on a seasonally adjusted basis. This index had declined slightly from June through September, and then edged up in October. A major impetus for the November increase came from the durable manufacturing materials category, which advanced 0.9 percent. After falling for several months, the index for primary nonferrous metals turned up: Sharp increases occurred for lead, copper, silver, tin, and gold. Portland cement prices also moved up, while hardwood lumber declined.

Following 2 months of very slight change, the non-durable manufacturing materials category moved up 0.2 percent. Prices turned up after falling in most recent months for plastic resins and materials, industrial chemicals, and paint materials. A large advance was observed for inedible fats and oils, while leather prices dropped substantially.

Construction material prices were mixed in November. Prices moved up for softwood lumber, wiring devices, and refractories. In contrast, declines occurred for plywood, gypsum products, building paper and board, and environmental controls.

Among components for manufacturing, prices advanced sharply for metal automotive stampings, electronic tubes, and metal-cutting machine tool parts. In addition, increases occurred for paper boxes and containers and for manifold business forms. Prices moved down for photographic supplies and pesticides.

The intermediate energy index rose 0.9 percent, led by increases for electric power, gasoline, diesel fuel, and residual fuel. Prices for liquefied petroleum gas continued to fall, however. The intermediate foods and feeds index moved up 0.7 percent, as large advances for crude vegetable oils and animal fats and oils were partly offset by declines for animal feeds, corn syrup, and flour.

## Crude goods

The Producer Price Index for Crude Materials for Further Processing advanced 2.0 percent on a seasonally adjusted basis, following decreases in each of the preceding 3 months. This increase was principally due to the index for crude foodstuffs and feedstuffs, which climbed 4.9 percent after declining in October. The index for livestock surged after falling in the previous month: Seasonally adjusted, hog prices advanced 16.9 percent and cattle prices increased 9.5 percent. Prices for live poultry, hay, and cocoa beans rose more rapidly than in October. On the other hand, prices for

oilseeds, raw fish, and fluid milk advanced less than in the preceding month. Prices for fruits, vegetables, wheat, and raw sugar continued to fall.

The index for crude nonfood materials other than energy fell 1.5 percent, the same decline as in the previous month. Cattle hide prices plummeted 11.2 percent. Prices also decreased for wastepaper, potash, and raw cotton. In contrast, prices rose for copper base scrap, ferrous scrap, and crude natural rubber.

The crude energy index moved down 0.9 percent. Crude petroleum prices fell 1.8 percent, the largest drop since March 1983. Prices also declined for natural gas while coal prices rose.

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December.

<sup>2</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Includes crude petroleum.

<sup>5</sup> Excludes crude petroleum.

<sup>6</sup> Percent of total finished goods.

<sup>7</sup> Percent of total intermediate materials.

<sup>8</sup> Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

<sup>9</sup> Percent of total crude materials.

**Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing**

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 86 percent of total finished goods, about 86 percent of total intermediate materials, and about 97 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP

grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

<sup>2</sup> All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Not available.

<sup>1</sup> Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

<sup>2</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>3</sup> Not available.

<sup>4</sup> Prices for all items in this grouping are lagged 1 month.

<sup>5</sup> Regional refined petroleum product prices and price indexes are presented in table 7.

<sup>6</sup> Prices for some items in this grouping are lagged 1 month.

<sup>7</sup> This grouping excludes fabricated wire products, which had been included in the discontinued code 10-13 and which are now grouped in code 10-88.

n.e.c. = Not elsewhere classified.

Note: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

**Table 7. Producer prices and price indexes for refined petroleum products by region**

(Price per gallon; July 1975 = 100 unless otherwise indicated)

| Commodity code | Commodity and region                | Other index base | Index        |              |              | Price Nov. 1984 |

<sup>1</sup> Data for March 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

<sup>2</sup> Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

<sup>3</sup> Not available.

**Table 8. Producer price indexes for special commodity groupings<sup>1</sup>**

(1967=100 unless otherwise indicated)

| Commodity grouping                                                                   | 1983           |          | 1984              |                      |                       |
|--------------------------------------------------------------------------------------|----------------|----------|-------------------|----------------------|-----------------------|
|                                                                                      | Annual average | November | July <sup>2</sup> | October <sup>2</sup> | November <sup>2</sup> |
| All commodities except farm products .....                                           | 306.6          | 309.1    | 315.3             | 314.1                | 314.7                 |
| All foods .....                                                                      | 257.5          | 258.0    | 271.7             | 267.2                | 267.9                 |
| Processed foods .....                                                                | 258.7          | 258.0    | 272.8             | 269.1                | 270.9                 |

| Agricultural machinery and equipment, less parts .....                               | 330.0          | 332.2    | 344.0             | 342.7                | 341.7                 |
| Farm and garden tractors, less parts .....                                           | 347.2          | 350.9    | 366.0             | 364.6                | 357.6                 |
| Agricultural machinery excluding tractors, less parts .....                          | 337.1          | 338.7    | 350.4             | 348.5                | 351.7                 |

<sup>1</sup> These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities Index.

<sup>2</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810168, 03810169, 03810239, 03810272, 03810274, 03810364, 038201, 03820303, 03830322, and 1231

Hosiery: 03810168, 03810169, 03810171, 03810272, 05810273, and 03810363, 03810364, 03810365

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Lumber and plywood<sup>3</sup>: 081 and 083

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106,

107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 10220161, 10220162, 102301, 10240301, 10240302, 10240304, 10240305, 102502, 10260315, 10260316, 10260317, 10260319, 10260325, 10280301, 10280302, and 10280303

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 11115211 and 111251

Metalworking machinery: 113A, 1132, 113304, 1137, and 1138

Total tractors: 1111 and 1128 less 11115211, 112802, and 112803

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 11115211 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 11115211

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 082, 083, 092, 101502, 10170399, 10170499, 10170611, 10170627, 10250101, 10250103, 10250104, 10250121, 10250123, 10250155, 10250254, 10251993, 10260307, 104101, 105, 106, 1071, 10730101, 10730106, 10730109, 10730115, 10730145, 10730146, 10730164, 10730165, 107402, 107403, 107404, 10740501, 10740781, 10740782, 10740791, 10810246, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10880211, 10880213, 10880721, 10880961, 10890533, 1142, 1147, 11490205, 11710109, 11710111, 11710112, 11710113, 11710115, 11710116, 11710117, 11710118, 11710119, 11710121, 11710265, 11710266, 11710267, 11710272, 11710273, 11710274, 11710282, 123101, 1232, 131105, 132, 133, 134, 136, 137, 1391, 1392, and 1393

<sup>3</sup> Formerly entitled: Lumber and wood products, excluding millwork

<sup>1</sup> Standard Transportation Commodity Code.

<sup>2</sup> The figure shown for each item is its percent of total railroad freight.

<sup>3</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>4</sup> The price index for total railroad freight also includes STCC groups not shown separately.

<sup>5</sup> Dec. 1978 = 100.

<sup>6</sup> This index contains shipments from a number of STCC groups.

<sup>1</sup> The figure shown for each item is its value weight expressed as a proportion of the total value weight for the U.S. Postal Service Index.

<sup>2</sup> Data for July 1984 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original

publication. Data are not seasonally adjusted.

<sup>3</sup> Postal service prices contained in the Consumer Price Index are from first class and fourth class mail.

# Technical Notes

## Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes, which is undergoing extensive changes, currently contains about 3,200 commodities and about 43,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by class of buyer and by degree of fabrication (i.e., finished goods, intermediate goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

*Finished goods* are commodities that will not undergo further processing and that are ready for sale to the final demand user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

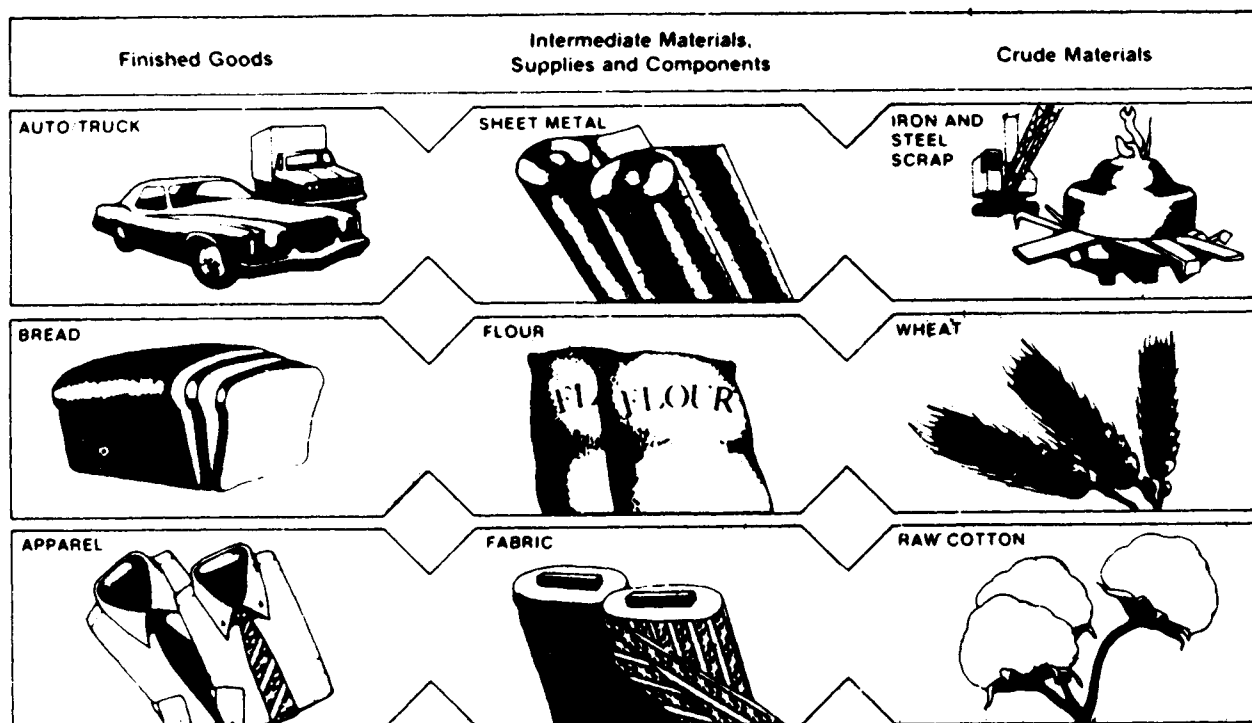

*Intermediate materials, supplies, and components* include commodities that have been processed but that require further processing. Examples of such semifinished goods include flour, cotton yarns, steel mill products, and lumber. The intermediate goods category also encompasses items that are physically complete but that

are purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

*Crude materials for further processing* include products entering the market for the first time which have not been manufactured or fabricated and which are not sold directly to consumers. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude non-food materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than broad commodity grouping indexes. Broad commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the broad commodity grouping indexes uses the total shipment values for commodities at all stages of processing. Within the stage-of-processing structure, on the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade

publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In aggregating producer price indexes, price changes for various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars as follows: "The price of a representative sample of finished goods produced in the United States has risen from \$100 in 1967 to \$225."

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

| <i>Index Point Change</i>   |             |
|-----------------------------|-------------|
| Finished Goods Price Index  | 185.5       |
| less previous index         | 184.5       |
| equals index point change   | 1.0         |
| <i>Index Percent Change</i> |             |
| Index point change          | 1.0         |
| divided by previous index   | 184.5       |
| equals                      | 0.005       |
| result multiplied by 100    | 0.005 x 100 |
| equal index percent change  | 0.5         |

Percent changes for 3-month and 6-month periods can be expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy,

seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

## Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index Revision (PIR) in table 4, "Producer price indexes for the net output of selected industries and their products." Table 4 includes data for Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1986, table 4 will cover nearly all 493 SIC mining and manufacturing industries.

### Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within the industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in one industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry that are not derived from the sales of their products. Because of the distinction between

primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

### Corresponding indexes

Some PIR indexes published in table 4 correspond to 8-digit commodities published in table 6. In these cases, movements in the commodity indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in table 6 on their original base period of 1967 = 100 or some later base, corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

### How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect,

but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the PPIR program, item weights are based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes. In addition, some

traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

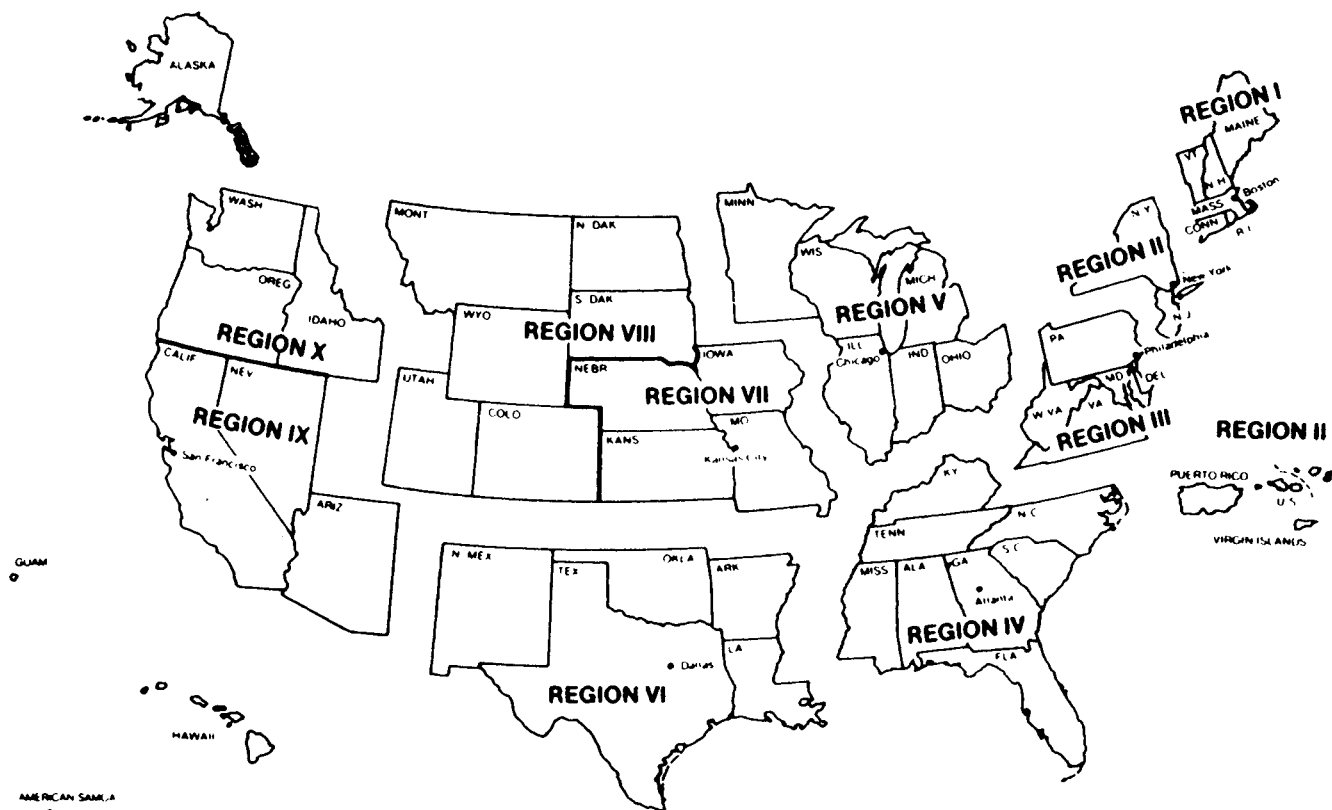

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of both the traditional PPI and the PPIR, see Chapter 7, "Producer Prices," in *BLS Handbook of Methods* (1982), Bulletin 2134-1. Reprints are available from the Bureau of Labor Statistics on request.
