Raymond J. Donovan, Secretary

**BUREAU OF LABOR STATISTICS**  
Janet L. Norwood, Commissioner

**OFFICE OF PRICES AND LIVING CONDITIONS**  
W. John Layng, Associate Commissioner

*Producer Prices and Price Indexes* is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights and changes in the sample. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

**Subscription price:**

\$17 a year domestic (includes  
supplement)

\$4.25 additional foreign

Single copy \$2.25

Supplement \$2.75

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 1983. Controlled circulation postage paid at Riverdale, Md. Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics.

# Price Movements

## March 1981

The Producer Price Index for Finished Goods moved up 1.3 percent on a seasonally adjusted basis from February to March. The March advance followed increases of 0.8 percent in February and 0.9 percent in January. Prices for intermediate materials climbed 1.1 percent, far more than in February but about the same as in January. Crude material prices decreased 1.3 percent, the third decline in the last 4 months (table A).

The 6.1 percent surge in the index for finished energy goods accounted for a little more than half of the rise in the Finished Goods Price Index in March. The consumer foods index also accelerated sharply in March, moving up 0.8 percent after falling 0.6 percent in the preceding month. The indexes for both capital equipment and consumer goods other than foods and energy, however, increased considerably less than in the first 2 months of the year.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 1.1 percent to 265.3 (1967 = 100). From March 1980 to March 1981, this index rose 10.5 percent. The finished energy goods index climbed 22.9 percent over the year, the consumer foods index increased 7.8 percent, the index for finished consumer goods other than foods and energy rose 8.3 percent, and capital equipment prices advanced 11.0 percent. The Producer Price Index for intermediate goods rose 9.9 percent since March 1980, and crude material prices were 13.4 percent higher than a year ago.

### Finished goods

*Finished consumer goods.* The Producer Price Index for finished consumer goods advanced 1.4 percent in March on a seasonally adjusted basis, following a rise of 0.8

<sup>1</sup> Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. For this reason, some of the figures shown above and elsewhere in this report may differ from

those previously reported.

r=revised.

percent in February. Price increases for energy goods accelerated sharply, and food prices turned up after several months of stable or slightly falling prices.

Finished energy prices rose 6.1 percent, the fifth consecutive large monthly advance. This upward movement reflected the impact of the lifting of controls on the price of domestic crude oil earlier in the year, as well as the continued passthrough of the latest round of imported oil price increases. (Because prices of refined petroleum products are lagged one month, the March indexes for these products reflect February price movements.) Gasoline prices were up 7.5 percent, compared with a 4.7 percent rise in February. Home heating oil prices increased 9.0 percent, after advancing 6.5 percent a month earlier.

The index for consumer finished foods increased 0.8 percent, after a decline of 0.6 percent in February. Prices turned up after falling during the 3 preceding months for pork and fresh fruits, and price increases accelerated sharply for fresh and dried vegetables and fish. Prices for beef and veal and processed poultry continued to fall, but much less than in February. On the other hand, prices fell more sharply than in February for refined sugar and eggs. Prices for Florida oranges declined 10.7 percent following a 57 percent surge in February. Prices rose less than in the previous month for all types of orange juice.

The index for finished consumer goods other than foods and energy rose 0.4 percent compared with a 0.7 percent increase in February. Smaller increases were

registered for passenger cars, alcoholic beverages, sanitary papers, electric lamps and bulbs, and newspaper publishing. Prices turned down in March after rising in the previous month for household flatware and cosmetics. Jewelry prices fell for the third consecutive month. On the other hand, price increases accelerated for household furniture, soaps and detergents, luggage and small leather goods, and mobile homes. Prices for tires and tubes advanced almost as much as in February.

**Capital equipment.** The Producer Price Index for capital equipment moved up 0.7 percent in March, somewhat less than in February (1.1 percent). Prices for heavy motor trucks edged down after rising a month earlier. Price increases slowed for a broad range of capital goods, notably food products machinery, railroad equipment, plastic and rubber industry machinery, commercial furniture, and agricultural machinery. In contrast, prices for machine tools, transformers and power regulators, and aircraft advanced considerably more than in February. Prices for industrial material handling equipment turned up markedly after edging down in February.

#### Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components rose 1.1 percent on a seasonally adjusted basis from February to March, considerably more than the 0.4 percent increase in

**February.** Most of the March advance was caused by a steep climb in the intermediate energy goods index. Prices for intermediate goods other than foods and energy rose somewhat more than in February, but less than in either January or December.

The index for intermediate energy goods moved up 4.3 percent over the month, following increases of just under 3 percent in both January and February. Prices for most major kinds of refined petroleum products used by businesses advanced about 7 or 8 percent. Electric power prices, however, decreased slightly.

The index for intermediate foods and feeds dropped 2.6 percent in March, almost as much as in February. Prices for refined sugar for food manufacturing fell 8.7 percent, after decreasing 2.7 percent in the previous month. Prices for feeds, flour, and crude vegetable oils also continued to decline, although not as sharply as in February.

The index for intermediate materials other than foods and energy increased 0.6 percent, after edging up 0.2 percent in the preceding month. The indexes for durable manufacturing materials and construction materials both turned up in March following February decreases. Higher steel prices more than offset lower prices for a broad range of nonferrous metals, notably cobalt, silver, gold, and copper; the result was a 0.3 percent rise in the durable manufacturing materials index, which had fallen 1.4 percent in February. After declining 0.3 percent in February, the construction materials index advanced 0.9 percent in March. Prices for bituminous paving materials, fabricated structural metal products, and paper boxes moved up considerably more than in February, and asphalt roofing and plywood prices turned up following February declines. Softwood lumber prices, however, continued to drop.

The nondurable manufacturing materials index rose 0.7 percent for the second consecutive month. Prices for leather and processed yarns turned up after falling in February, and synthetic fiber prices rose considerably more than in the previous month. Synthetic rubber and industrial chemical prices continued to increase rapidly, although not as fast as in February. On the other hand, prices for finished fabrics and phosphates turned down following February advances. Prices for gray fabrics, paper, paint materials, and pharmaceutical materials showed little or no change after substantial February increases.

Among other intermediate goods, prices for metal containers, ball and roller bearings, notions, mixed fertilizers, pesticides, and plastic film and sheeting turned down after registering large upward movements in February. Prices for motor vehicle parts and tractor parts rose much less than in the preceding month. In contrast, prices for electronic components and machine tool parts advanced considerably more than in February.

### Crude materials

The Producer Price Index for Crude Materials for Further Processing fell 1.3 percent in March on a seasonally adjusted basis, after rising 2.9 percent in February. Prices declined for both crude foodstuffs and nonfood materials excluding energy, while crude energy prices rose much less than in the previous month.

The index for crude foodstuffs and feedstuffs moved down 2.0 percent, the fourth consecutive monthly decrease. Cattle prices moved down for the seventh consecutive month, and hog prices dropped for the fourth consecutive month. Sugar prices fell even more (13.1 percent) than in February (12.2 percent). Prices for soybeans and live poultry also dropped more than in February. Although the grains index also continued to move down, the March decline was smaller than in February. On the other hand, cocoa bean prices rose for the third consecutive month after decreasing rapidly for the 10 months ended in December.

The index for crude nonfood materials less energy decreased 2.1 percent, somewhat less than in either of the 2 previous months. Prices for nonferrous scrap moved down for the fourth consecutive month, although the decline was much less than in any of the preceding 3 months. Prices for natural rubber and wastepaper declined more than in the previous month. Prices for iron and steel scrap and raw cotton rose, however, following substantial decreases in January and February.

The crude energy materials index edged up 0.3 percent, following a 20.0 percent jump in February. Crude petroleum prices were unchanged after soaring in February, when the cumulative impact of several months of deregulation moves was reflected. Natural gas prices, which had been unchanged in February, increased 1.3 percent.

# New Base for Producer Price Indexes

Beginning with the release of January 1982 data in February 1982, most Producer Price Indexes will shift to a new base year. All indexes currently expressed on a base of 1967 = 100, or any other base through December 1976, will be rebased to 1977 = 100. Only indexes with a base later than December 1976 will keep their current base. Rebasing of PPI data is part of a comprehensive rebasing of indexes published by the Federal Government. (See Technical Note, "Federal agencies updating base year of indexes to 1977," in the February 1981 issue of *Monthly Labor Review*.) The last rebasing of PPI data occurred in January 1971, when the current 1967 base was substituted for the former 1957-59 base.

Historical data for each PPI series on the new base will be available from BLS on request.

To convert any continuous index series on the 1967 base to a new continuous series on the 1977 base, divide each index value on the former base by the index value for the new base period and multiply by 100. For example, the August 1980 index for steel mill products was 301.0 (1967 = 100). To convert that index to a base of

1977 = 100, divide 301.0 by the 1977 annual average for steel mill products on a 1967 = 100 base, which was 229.9. The August 1980 index for steel mill products on a base of 1977 = 100 thus becomes:

$$(301.0 / 229.9) \times 100 = 130.9$$

Rebasing an index does not affect the calculation of percent changes over time, except for possible rounding differences, so long as all calculations are performed with indexes expressed on the same base. Long-term business contracts with escalation clauses which make changes in selling or buying prices dependent on percent changes in specified PPI series should, therefore, not be substantively affected by the rebasing next year. However, contracts with escalation clauses which make price changes dependent on changes in index points may be greatly affected by rebasing. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 570, available on request.)

<sup>1</sup>Comprehensive relative importance figures are computed once each year in December.

<sup>2</sup>Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

<sup>3</sup>Not seasonally adjusted.

<sup>4</sup>Includes crude petroleum.

<sup>5</sup>Excludes crude petroleum.

<sup>6</sup>Percent of total finished goods.

<sup>7</sup>Percent of total intermediate materials.

<sup>8</sup>Formerly titled "Crude materials for further processing, excluding crude

foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

<sup>a</sup>Percent of total crude materials.

<sup>c</sup>corrected.

Indexes for most Special Groupings by Stage of Processing have been corrected to remove an error made when these indexes were revised February 13. Although this error caused each monthly index from January 1976 forward to be at an incorrect level, it did not affect the calculation of percent changes based on these indexes, except for possible rounding differences. Corrected historical data for the Special Groupings by Stage of Processing are available without charge on request to the Division of Industrial Prices and Price Indexes, Bureau of Labor Statistics, 600 E Street, N.W., Room 5210, Washington, D.C. 20212, telephone Area Code 202-272-5113.

**Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing**

(1967 = 100 unless otherwise indicated)

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100,000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 91 percent of total finished goods, about 89 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the

relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

<sup>2</sup> All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Not available.

**Table 3. Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted**

<sup>1</sup> Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

<sup>2</sup> Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. Data are not seasonally adjusted.

<sup>3</sup> Not available.

<sup>4</sup> Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8.

<sup>a</sup> Prices for all items in this grouping are lagged 1 month.

<sup>b</sup> Regional refined petroleum product prices and price indexes are presented in table 7.

<sup>c</sup> Prices for some items in this grouping are lagged 1 month.

N.E.C. = Not elsewhere classified.

NOTE: Titles of some commodities are not shown in this table because they fall to meet our publication criteria.

**Table 7. Producer prices and price indexes for refined petroleum products by region**

(Price per gallon; July 1975 = 100 unless otherwise indicated)

| Commodity code | Commodity and region                | Other index base | Index              |                    |                    | Price<br>Mar.<br>1981 |

<sup>1</sup> Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

<sup>2</sup> Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

<sup>3</sup> Not available.

**Table 8. Producer price indexes for bituminous coal by region**

(June 1976 = 100)

| Code    | Commodity and region                  | Indexes                |                        |                        | Code    | Commodity and region         | Indexes                |                        |                        |

| Agricultural machinery excluding tractors, less parts.....                                    | 265.0          | 258.9 | 279.9   | 285.5   | 286.9   |

<sup>1</sup> These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping (titles in table 6). The weights are those used for the comprehensive All Commodities Index.

<sup>2</sup> Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62, and 02-9

Industrial commodities, less fuels and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-37-03-42, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-92-02, 03-83-03-22, 03-83-03-42, and 12-31

Hosiery: 03-81-01-72, 03-81-01-73, 03-81-02-74, 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-75, 03-81-02-78, and 03-81-03-62

Chemical and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-35 and 06-36

Lumber and wood products, excluding millwork and other wood products: 08-1 and 08-3

Special metals and metal products: 10, 11-1, and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7, and 10-8

Copper and copper products: 10-22-01-06, 10-22-01-08, 10-22-01-13, 10-23-01, 10-24-01-06, 10-25-02, and 10-28-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-9

Agricultural machinery, including tractors: 11-11, 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11 and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51

Industrial valves: 11-49-01-01 through 11-49-01-06, 11-49-01-16 through 11-49-01-19, 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 06-21, 07-21, 08-11, 08-12-01-01, 08-12-01-02, 08-12-01-31, 08-12-01-71, 08-2, 08-3, 08-2, 10-13-02-39, 10-13-02-48, 10-13-02-55, 10-13-02-63, 10-13-02-69, 10-13-02-71, 10-13-02-89, 10-13-02-91, 10-15-01-31, 10-15-01-32, 10-15-01-33, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-05, 10-25-01-17, 10-25-01-18, 10-25-01-19, 10-25-01-21, 10-25-01-23, 10-25-02-51, 10-25-02-52, 10-25-19-93, 10-26-01-06, 10-26-01-07, 10-26-01-09, 10-26-01-11, 10-26-02-67, 10-26-02-71, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-08, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-15, 10-73-01-55, 10-73-01-57, 10-74-01-01, 10-74-01-31, 10-74-01-81, 10-74-01-82, 10-74-01-87, 10-74-01-91, 10-74-01-95, 10-81-01-46, 10-83-01-01, 10-83-01-03, 10-83-01-05, 10-83-01-07, 10-83-01-09, 10-83-01-11, 10-83-01-21, 10-83-01-23, 10-83-01-31, 10-83-01-33, 10-83-01-35, 10-83-01-37, 10-83-01-41, 10-83-01-46, 10-83-01-48, 10-89-01-26, 10-89-01-33, 10-89-01-51, 11-42, 11-47, 11-49-01-02, 11-49-01-06, 11-49-01-12, 11-49-01-15, 11-71-01-01, 11-71-01-02, 11-71-01-03, 11-71-01-04, 11-71-02-65, 11-71-02-71, 11-71-02-73, 12-11-01-06, 12-32, 13-11-01-01, 13-11-02-07, 13-2, 13-3, 13-4, 13-6, 13-7, 13-91, 13-92, 13-93

**Table 10. Producer price indexes: Changes in commodity specifications, March 1981**

| Commodity code | New specification   | Old specification  |
|----------------|---|--|
| 10-25-01-06    | Aluminum coil sheet: Beer can stock, 3004, .0134" or .0135" x 44" through 48", nonheat-treatable, for one piece beer and soft drink can bodies; manufacturer to user, f.o.b. destination, base box. | Aluminum coil sheet: Beer can stock, 5182 or 3004 alloy .0135" x 35" to 48", non-heat-treatable, 100,000 lbs. base quantity; manufacturer to user, f.o.b. destination, base box. |
| 11-42-01-01    | Freight elevator, electric, uninstalled, various sizes; manufacturer to user or contractor, f.o.b. factory or f.o.b. job site, each.  | Freight elevator, electric, uninstalled, 4,000 lbs. capacity; manufacturer to user or contractor, f.o.b. factory, site, each.  |
| 11-42-01-02    | Passenger elevator, geared type, various sizes, uninstalled; manufacturer to user or contractor, f.o.b. factory or f.o.b. job site, each.   | Passenger elevator, 2,000 lbs. capacity, uninstalled; manufacturer to user or contractor, f.o.b. factory, each.  |
| 11-42-01-03    | Passenger elevator, gearless type, various sizes, uninstalled; manufacturer to user or contractor, f.o.b. factory or f.o.b. job site, each.   | Elevator, gearless electric, 3,500 lbs. capacity, 500' per minute, 10 stop, 10 opening, 90' rise; manufacturer to user, f.o.b. plant, uninstalled, each.                         |

<sup>1</sup> Standard Transportation Commodity Code.

<sup>2</sup> The price index for total railroad freight also includes STCC groups not shown separately.

<sup>3</sup> The figure shown for each item is its percent of total railroad freight.

<sup>4</sup> Dec. 1978 = 100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

<sup>1</sup> Data for November 1980 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>2</sup> Telephone services contained in the Consumer Price Index cover not only local residential service, but also parts of toll service, equipment leasing (such as extension phones), and non-recurring charges (such as installation).

# Technical Notes

## Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

*Finished goods* are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

*Intermediate materials, supplies, and components* are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, li-

quefied petroleum gas, paper boxes, and motor vehicle parts.

*Crude materials for further processing* include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices

generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$225."

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

| <i>Index Point Change</i>     |             |
|-------------------------------|-------------|
| Finished Goods Price Index    | 185.5       |
| less previous index           | 184.5       |
| equals index point change     | 1.0         |
| <i>Index Percent Change</i>   |             |
| Index point change            | 1.0         |
| divided by the previous index | 184.5       |
| equals                        | 0.005       |
| result multiplied by 100      | 0.005 x 100 |
| equals index percent change   | 0.5         |

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

## Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed sub-products (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

### Kinds of product Indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products

primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

### Corresponding Indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of  $1967 = 100$  or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

### How new Indexes differ from traditional commodity Indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry

shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Reprints are available from the Bureau of Labor Statistics on request.

# Rent or Buy?

Evaluating  
Alternatives  
in the  
Shelter Market

*Rent or Buy? Evaluating Alternatives in the Shelter Market* helps a person or family compare the financial aspects of owning and renting shelter suited to their needs. A step-by-step procedure for making the comparison is outlined and fully illustrated. Space is

provided to help determine:

- The monthly outlay to own a house of your choosing before and after tax saving from homeownership.
- The proceeds if you were to sell the house after a given period of time.

• The amount you can spend for rent and be as well-off financially after a given period of time as if you bought.

The pamphlet, first issued in 1974, was updated in 1979 to depict more recent economic conditions that affect shelter decisions.
