# Price Movements October 1981

The Producer Price Index for Finished Goods moved up 0.6 percent from September to October on a seasonally adjusted basis. The October advance followed increases of 0.2 percent in September and 0.3 percent in August. The intermediate goods index was unchanged in October, after edging up 0.1 percent in the previous month. Crude material prices declined 1.7 percent, the third consecutive monthly decrease (table A). (See important announcement about postponement of rebasing indexes—page 3.)

Among finished goods, prices for both energy goods and consumer foods were slightly lower. However, the index for finished goods other than foods and energy climbed 1.0 percent, far more than the 0.2 percent rise in September. Virtually the entire acceleration could be attributed to the swing in motor vehicle prices. The October motor vehicles index reflected higher prices charged for 1982 models. In addition, the October index no longer reflected the liquidation allowances that had led to a drop in the motor vehicles index in September,

when domestic producers closed out the 1981 model year with across-the-board discounts.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved up 1.1 percent to 274.0 (1967=100). Over the year, the Finished Goods Price Index advanced 7.3 percent. The finished consumer foods index rose 2.3 percent from October 1980 to October 1981, prices for finished energy goods were up 16.1 percent, the index for finished consumer goods other than foods and energy increased 6.7 percent, and capital equipment prices climbed 8.9 percent. The Producer Price Index for intermediate goods was up 7.5 percent over the year, but crude material prices were 0.8 percent lower than a year ago.

## Finished goods

*Finished consumer goods.* The Producer Price Index for finished consumer goods rose 0.4 percent in October, despite decreases for both energy and foods. The Oc-

<sup>1</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. For this reason, some of the figures shown above and elsewhere in this report may differ from

those previously reported.  
r = revised.

tober rise was largely the result of a 4.2 percent advance for passenger cars. The passenger car index was 7.9 percent higher in October 1981 than in the same month a year before. (See "Quality Changes for 1982 Model Passenger Cars," page 4.) In addition, prices rose for newspapers, periodicals, books, tobacco products, costume jewelry, drugs, and cutlery. In contrast, prices declined for cosmetics and sterling flatware.

The index for finished consumer foods edged down 0.2 percent, following no change in the previous month. Beef and veal prices turned down after increasing in September, and pork prices fell more than in the preceding month. Prices also fell sharply for fresh and dried vegetables, peanut butter, and milled rice. On the other hand, prices advanced for fresh fruits, eggs, soft drinks, fish, roasted coffee, vegetable oil end products, and refined sugar.

Prices for finished energy goods moved down 0.4 percent, after a 0.6 percent increase in September. Home heating oil prices decreased 1.4 percent, the fourth consecutive decline. On the other hand, gasoline prices moved up 0.4 percent, after falling in each of the previous 5 months.

**Capital equipment.** The Producer Price Index for capital equipment rose 0.9 percent, after showing no change in September. Most of the upturn was due to motor vehicles. Among other capital goods, prices rose for construction machinery, chemical industry machinery, printing trades machinery, bakery industry

machinery, oilfield machinery, and mining machinery. On the other hand, prices moved down for aircraft, railroad equipment, office machinery, and industrial material handling equipment.

### Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components showed no change in October on a seasonally adjusted basis. This index had increased in every month since June 1975. Prices for the majority of intermediate goods either declined or rose only slightly over the month.

The index for intermediate materials other than foods and energy edged up 0.1 percent, much less than in any other recent month. The nondurable manufacturing materials index declined 0.3 percent, after climbing 0.7 percent in each of the 2 preceding months. Prices for industrial chemicals and gray fabrics fell. However, prices moved up for oxygen, leather, synthetic fibers, and paperboard.

The durable manufacturing materials index decreased 0.4 percent. Although prices were lower for silver, gold, lead, zinc, and copper, increases for steel mill products, ferrosilicon, and tin partly offset these decreases.

The construction materials index rose 0.4 percent in October, after remaining virtually unchanged in the third quarter. Prices advanced for fabricated structural steel, concrete products, wiring devices, and brass fittings. In contrast, prices continued to decline for plywood, softwood lumber, and asphalt roofing.

Among other intermediate nonfood nonenergy goods, increases were registered for foam rubber, plastic packaging and shipping products, laminated plastic sheets, ball and roller bearings, and pesticides. Prices for metal containers and mixed fertilizers moved down, however.

The index for intermediate foods and feeds fell 1.4 percent, led by lower prices for animal feeds, corn syrup, and refined vegetable oils. On the other hand, large increases were recorded for refined sugar used in food manufacturing and crude vegetable oils.

The intermediate energy index registered the fifth decline in the last 6 months. Prices for electric power, residual fuel, and liquefied petroleum gas decreased. Other petroleum fuels were virtually unchanged, however.

### **Crude materials**

The Producer Price Index for Crude Materials for Further Processing fell 1.7 percent on a seasonally adjusted basis, the third consecutive decline. The index for foodstuffs and feedstuffs moved down 2.5 percent, also the third consecutive decrease. Prices for cattle fell 4.2

percent, the second steep drop in the last 3 months. Prices for oilseeds and hogs fell much more than in the previous month. Corn prices fell for the third consecutive month, although the October drop was less severe than in either of the previous 2 months. On the other hand, prices for raw cane sugar and fluid milk turned up after falling in most recent months. Live poultry and wheat prices also advanced.

The index for crude nonfood materials other than energy edged up 0.2 percent, after falling 0.8 percent in both August and September. Prices for raw cotton turned up after declining rapidly in 4 of the 5 previous months. Sand and gravel prices also increased. On the other hand, prices for nonferrous scrap and wastepaper moved down substantially. Cattle hide prices dropped after increasing nearly 14 percent in September. Natural rubber prices declined for the fifth consecutive month. Iron and steel scrap prices were slightly lower.

The crude energy index fell 1.2 percent, after rising by the same amount in September. Crude petroleum prices moved down, after showing no change in the previous month. Coal prices edged up slightly following a 1.1 percent increase in September.

### **Postponement of Rebasing of Producer Price Indexes**

Because of severe budget constraints, the Bureau of Labor Statistics will not be able to carry out by January 1982 the Government directive to rebase the Producer Price Index and the Consumer Price Index to the new 1977 = 100 reference base. Postponement is required because of the high cost of both the direct production work necessary to prepare the data and the information services to explain the change.

# Quality Changes for 1982 Model Passenger Cars

The value of quality changes for the 1982 model domestic passenger cars included in the Producer Price Index averaged \$104.70 at the manufacturing level and \$126.32 at the retail level. The estimates represent about 22.5 percent of the average increase of \$562.54 in manufacturers' suggested list prices and approximately the same percentage of the average increase of \$463.61 in producers' prices.

These estimates are based on a review by BLS of data from automobile producers for similarly equipped 1981 and 1982 model cars. Of the 17 domestic cars priced in the Producer Price Index, the automobile companies supplied quality change data for 16. Of these 16 cars, 15 are also priced for the Consumer Price Index.

These estimates of quality change are used in the Producer Price Index for October when most new model

year cars are introduced. Estimates of quality change are also used in the Consumer Price Index starting in October.

The \$126.32 estimated retail value of the quality change breaks down as follows:

- \$84.68 for changes to improve fuel economy and to reduce emissions for improved air quality in accordance with current and anticipated Federal standards.
- \$41.64 for other changes not related to fuel economy or air quality standards, such as changes for improved corrosion protection and for standard equipment additions or deletions.

# Additional Telecommunications Indexes Introduced

Publication of Producer Price Indexes for two additional product lines of the telephone communications industry begins in this issue of *Producer Prices and Price Indexes*. Included in this issue are historical indexes from January 1972 to present for *Local service, coin* (4811-114) and *Private lines, interstate* (4811-311). A revised aggregate series for *Local Service* (4811-1), reflecting the inclusion of coin along with residential, business, and optional additional usage, is also presented (table 16). These indexes are designed to measure changes in the prices charged by producers of telecommunications services to those outside the industry. Unlike the Consumer Price Index for telephone services, which only measures prices paid by consumers, these indexes measure prices received by telephone companies for services to both business and residential users.

Prices used in the calculation of these indexes are the rates in effect on the 15th day of the index month, obtained directly from local operating companies for coin service, and from FCC tariff filings for interstate private lines. Prices are net of all taxes.

Classification of the telephone communications industry is based on the Standard Industrial Classification (SIC). The 5-digit, 7-digit, and 9-digit product index classifications were developed by the Bureau of Labor Statistics as a supplement to the SIC. The indexes now being published account for approximately 75 percent of the 1972 revenues of the telephone industry.

Descriptions of the services included in the two new index series follow:

**Local service, coin** (4811-114). This index measures changes in the prices of public and semipublic coin telephone services offered to users in the local calling area. Public coin telephones offer unrestricted service for nonsubscribers and the public. There is unlimited access to public telephones, which are located in areas

commonly associated with free public concourse, such as city streets, airports, bus and rail terminals, hotels, and public buildings. Semipublic telephone service, on the other hand, combines the features of public and business subscriber use. Semipublic telephones are placed on a business premises at the behest and for the use of the proprietor, who pays a flat monthly fee or assures the phone company of a minimum monthly revenue for this service. The phone is listed in the name of the business subscriber, who thereby receives all incoming calls. The business proprietor, employees, and customers may make outgoing pay calls.

**Private lines, interstate** (4811-311). This index measures changes in the prices for both access to and usage of private telephone lines by interstate customers. This service provides a specific customer with a dedicated private communications line connecting two or more locations designated by the customer, which means that the customer has exclusive access to and usage of a particular communications channel. This distinguishes private line service from WATS and from message toll service, in which any one user may share the same channel with many other customers. Exclusive access to and usage of a private line imply maximum speed and reliability of access, security of transmitted information, and amenability to a large volume of traffic. Typical purchasers of private line service are government agencies (e.g., the Defense Department's AUTOVON), and businesses, such as banks, utilities, airlines, and TV networks.

More detailed information on the methodology used to develop price indexes for the telecommunications industry may be obtained by request from the Bureau of Labor Statistics, Office of Prices and Living Conditions, Division of Industrial Prices and Price Indexes, 600 E Street, N.W., Room 5210, Washington, D.C. 20212.

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December.

<sup>2</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Includes crude petroleum.

<sup>5</sup> Excludes crude petroleum.

<sup>6</sup> Percent of total finished goods.

<sup>7</sup> Percent of total intermediate materials.

<sup>8</sup> Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

<sup>9</sup> Percent of total crude materials.

**Table 2. Producer price indexes and percent changes for selected commodity groupings by stage of processing**

<sup>1</sup> Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 98 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown

reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

<sup>2</sup> All data are subject to revision 4 months after original publication.

<sup>3</sup> Not seasonally adjusted.

<sup>4</sup> Not available.

**Table 3. Producer price indexes and percent changes for selected stage-of-processing groupings, seasonally adjusted**

(1987 = 100)

<sup>1</sup> Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

<sup>2</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>3</sup> Not available.

<sup>4</sup> Regional price indexes for bituminous coal, industrial sizes, contract are presented in table 8.

<sup>5</sup> Prices for all items in this grouping are lagged 1 month.

<sup>6</sup> Regional refined petroleum product prices and price indexes are presented in table 7.

<sup>7</sup> Prices for some items in this grouping are lagged 1 month.

N.E.C. = Not elsewhere classified.

NOTE: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

**Table 7. Producer prices and price indexes for refined petroleum products by region**

(Price per gallon; July 1975 = 100 unless otherwise indicated)

<sup>1</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

<sup>2</sup> Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

<sup>3</sup> Not available.

# Changes in Methodology of Calculating Regional Bituminous Coal Price Indexes

Effective with the release of January 1982 Producer Price Indexes in February, indexes for bituminous coal by region will be calculated in accordance with the methodology of the Producer Price Index Revision program. Substantially expanded coverage and the use of probability sampling techniques are among the principal benefits of this change in methodology.

As a result, indexes for bituminous coal by region which now appear in table 8 will be discontinued after the December 1981 issue of *Producer Prices and Price Indexes*. Data for new regional bituminous coal indexes, on a base of December 1981 = 100, will appear in table 4, "Producer price indexes for the net output of selected industries and their products," starting with the January 1982 issue. That issue will also list new indexes

in table 4 corresponding to indexes previously appearing in table 8.

Even though all regional bituminous coal indexes currently in table 8 are to be discontinued, tables of historical data on a December 1981 = 100 base for these indexes will be available from the Bureau of Labor Statistics on request. These tables should be especially useful for those firms which have been using table 8 indexes to implement escalation clauses of long-term business contracts.

For further information, please write: Mr. Thomas R. Tibbetts, Assistant Commissioner for Industrial Prices and Price Indexes, Bureau of Labor Statistics, 600 E Street, N.W., Washington, D.C. 20212.

<sup>1</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>2</sup> Not available.

NOTE: These indexes are designed to measure changes in the price of coal sold in contract sales transactions (excluding captive production) in various domestic mining regions. Prices are reported by coal operators or sales agents, f.o.b. mine, per net short ton.

<sup>1</sup> These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

<sup>2</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities, less farm products: 02 through 15

All foods: 011,017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities, less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810155, 03810172, 03810173, 03810239, 03810272, 03810274, 03810362, 03810364, 038201, 038202, 03830322, 03830342 and 1231

Hosiery: 03810172, 03810173, 03810272, 03810364

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810278, and 03810362

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635 and 0636

Lumber and wood products, excluding millwork and other wood products: 081 and 083

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 102301, 10240301, 10240302, 10240304, 10240305, 102502, and 102601

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 118, and 119

Agricultural machinery, including tractors: 1111, 1112 less 111151 and 111251

Metalworking machinery: 1132, 113304, 1137, and 1138

Numerically controlled machine tools: 11371111, 11371112, 11371411 and 113716

Total tractors: 1111 and 1128 less 111151, 112802 and 112803

Industrial valves: 11490101 through 11490106, 11490116 through 11490119, 11490121 through 11490127

Industrial fittings: 11490111 through 11490115

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111151 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 111151

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 08120171, 082, 083, 092, 10130239, 10130248, 10130255, 10130263, 10130269, 10130271, 10130289, 10130291, 101502, 10250101, 10250103, 10250104, 10250105, 10250117, 10250118, 10250119, 10250121, 10250131, 10250254, 10251993, 10260106, 10260107, 10260109, 10260111, 10260267, 10260271, 104101, 105, 106, 107, 10730101, 10730106, 10730111, 10730112, 10730113, 10730114, 10730115, 10730155, 10730157, 107402, 107403, 107404, 10740501, 10740731, 10740781, 10740782, 10740787, 10740791, 10810146, 10830201, 10830203, 10830205, 10830207, 10830209, 10830211, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830381, 10890526, 10890533, 10890551, 1142, 1147, 11490102, 11490106, 11490112, 11490115, 11710101, 11710102, 11710103, 11710104, 11710265, 11710271, 11710273, 1232, 131105, 132, 133, 134, 136, 137, 1391, 1392, 1393

<sup>1</sup> Standard Transportation Commodity Code.

<sup>2</sup> The price index for total railroad freight also includes STCC groups not shown separately.

<sup>3</sup> The figure shown for each item is its percent of total railroad freight.

<sup>4</sup> Dec. 1978=100.

NOTE: The index is designed to measure changes in the prices of shipping goods by rail in the United States. The representative prices and sample used for the index reflect the railroads' prices for shipping a fixed set of commodities under specified and unchanging conditions. The index is not intended to measure changes in railroad revenue or shipper costs that result from changes in services or mode.

<sup>1</sup> Data for June 1981 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>2</sup> Both current as well as historical indexes for Local service (4811-1) have been revised to reflect the inclusion of Coin

along with Residential, Business, and Optional additional usage. See table 16.

<sup>3</sup> Telephone services contained in the Consumer Price Index cover not only local residential service, but also parts of toll service, equipment leasing (such as extension phones), and non-recurring charges (such as installation).

# Technical Notes

## Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

*Finished goods* are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

*Intermediate materials, supplies, and components* are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, li-

quefied petroleum gas, paper boxes, and motor vehicle parts.

*Crude materials for further processing* include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices

generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from \$100 in 1967 to \$225."

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

| Index Point Change            |              |
|-------------------------------|--------------|
| Finished Goods Price Index    | 185.5        |
| less previous index           | <u>184.5</u> |
| equals index point change     | 1.0          |
| Index Percent Change          |              |
| Index point change            | <u>1.0</u>   |
| divided by the previous index | 184.5        |
| equals                        | 0.005        |
| result multiplied by 100      | 0.005 x 100  |
| equals index percent change   | 0.5          |

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

## Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Traditional commodity price indexes and Industry-Sector Price Indexes (ISPI's) will continue to be published. In 1983, however, an entirely new structure will replace the traditional commodity structure as the primary vehicle for releasing and analyzing price changes at the primary market level.

### Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products

primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

### Corresponding Indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 11, 12, and 13. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 11, or 13 on their original base period of 1967=100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 11, 12, or 13 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

### How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights*. Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry

shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Reprints are available from the Bureau of Labor Statistics on request.
