*Producer Price Indexes* is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. A subscription may be ordered for 1 or 2 years from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

Annual subscription price:

\$29 a year domestic (includes

supplement)

\$36.25 foreign

Single copy \$10; foreign \$12.50

Supplement \$17; foreign \$21.25

Send correspondence on subscription matters, including address changes and missing issues, to the Superintendent of Documents; telephone (202) 275-3054.

# Price Movements

## March 1991

The Producer Price Index for Finished Goods moved down 0.3 percent seasonally adjusted from February to March. This decline followed a decrease of 0.6 percent in February and marked the fourth consecutive monthly drop. Prices received by domestic producers of intermediate goods fell 1.0 percent in March, more than in any of the 3 preceding months. The Crude Goods Price Index moved down 3.2 percent, after dropping 8.2 percent in the month before. (See table A.)

The increase in the index for finished goods other than foods and energy, which had registered increases averaging 0.4 percent during the previous 4 months, slowed to a rise of 0.2 percent in March. The energy goods index moved down for the fourth consecutive month, although by not as much as in February. Food prices rose slightly for the second consecutive month.

From December 1990 to March 1991, the Finished Goods Price Index decreased at a seasonally adjusted annual rate of 3.9 percent. In contrast, this index advanced at an annual rate of 4.4 percent in the fourth quarter of 1990 and at a rate of 11.3 percent in the third. The downturn in the first quarter was mostly due to a reversal in energy prices. The consumer foods index showed relatively little change for the fourth consecutive quarter. The increase in the index for finished goods other than foods and energy accelerated moderately from an

annual rate of 3.5 percent in each of the last two quarters of 1990 to 4.4 percent in the first quarter of this year.

Before seasonal adjustment, the Producer Price Index for Finished Goods moved down 0.5 percent in March to 120.6 (1982=100). During the 12 months ended in March 1991, the Finished Goods Price Index rose 2.9 percent. During this same period, consumer food prices edged up 0.6 percent, the energy goods index climbed 11.8 percent, and prices for finished goods other than foods and energy were up 3.7 percent. The Intermediate Goods Price Index was 1.7 percent higher than a year ago, while crude material prices declined 3.8 percent over the year.

### Finished goods

The index for consumer goods other than foods and energy edged up 0.2 percent in March, much less than in either February (0.5 percent) or January (0.8 percent). Nevertheless, for the first quarter as a whole, this index accelerated from a 3.1-percent annual rate of increase in the fourth quarter of 1990 to a rate of 5.6 percent. The March slowdown was broad-based. After substantial increases in February, indexes for passenger cars and women's apparel rose much more slowly, and indexes for prescription and over-the-counter drugs, floor coverings, lawn and garden equipment,

and home electronic equipment turned down. Prices for soaps and detergents and for alcoholic beverages also decreased. Prices turned up following February declines, however, for footwear, sanitary papers, toys and games, and tires and tubes. In addition, indexes for tobacco products and newspapers rose more on a seasonally adjusted basis than in the preceding month.

The index for finished energy goods fell 3.2 percent seasonally adjusted in March, after decreasing 5.1 percent in February and 2.5 percent in January. During the first quarter of 1991, this index slumped at a seasonally adjusted annual rate of 35.4 percent; in contrast, this index rose at a rate of 17.7 percent from September through December 1990 after surging at an annual rate of 118.7 percent during the third quarter. In March, gasoline price decreases slowed to 5.8 percent following double-digit drops in both February and January. In addition, the index for residential gas also moved down less than in February. By contrast, however, the index for home heating oil dropped 16.5 percent, considerably more than in other recent months.

The index for finished consumer foods inched up 0.2 percent for the second consecutive month. These prices moved up at a seasonally adjusted annual rate of 0.6 percent in the first quarter, less than the rate of 1.3 percent recorded in the final quarter of last year. In March, advances for eggs, pork, bakery products, dairy products, fresh fruits, and pasta outweighed lower prices for processed chickens, candy and nuts, fresh and dried vegetables, beef and veal, roasted coffee, and processed fruits and vegetables.

The capital equipment index also moved up 0.2 percent, the same as in February. Increases in March were led by ships, light trucks, tools and dies, and oilfield machinery and

equipment. Significant decreases included computers, heavy trucks, and telephone and telegraph apparatus. From December 1990 to March 1991, the capital equipment index rose at a seasonally adjusted annual rate of 3.2 percent, about the same as in most other recent calendar quarters.

### Intermediate goods

After falling an average of about 0.7 percent in each of the 3 preceding months, the Producer Price Index for Intermediate Materials, Supplies, and Components fell 1.0 percent in March, seasonally adjusted. Prices again dropped for energy goods and manufacturing materials, while prices for foods and feeds continued to advance. (See table B.)

For the quarter ending in March, intermediate prices fell at a seasonally adjusted annual rate of 8.6 percent, the steepest rate of decline in 5 years. This turnaround was prompted by a sizable downturn in energy prices and declines for both nondurable and durable manufacturing materials. Food and feed prices, however, turned up, and prices for construction materials continued to rise slightly.

In March, the index for energy goods dropped 5.0 percent, following a decline of 4.1 percent in the preceding month. Prices fell markedly for diesel fuel and residual fuel. Prices declined for gasoline, jet fuels, and liquefied petroleum gas for the fifth time in as many months. The index for utility natural gas also fell. In contrast, prices advanced for industrial electric power.

Prices for nondurable manufacturing materials fell 1.7 percent following a drop of 0.9 percent in February. Prices fell faster than in the previous month for industrial chemicals, plant materials, paperboard, woodpulp, plastic resins and

materials, and leather. In addition, synthetic fiber prices turned down after rising in February. On the other hand, price declines slowed for inedible fats and oils, while prices turned up for synthetic yarns and phosphates after decreasing in the preceding month.

After dropping 0.2 percent in February, the index for durable manufacturing materials fell 0.8 percent, making the March decline the sixth decline in as many months. Prices turned down after rising or showing no change in the previous month for copper and brass mill shapes, primary aluminum and zinc, cold rolled steel sheet and strip, and cold finished steel bars. However, prices rose following February declines for plywood, hot rolled steel sheet and strip, primary copper, prepared paint, silver, flat glass, and building paper and board. Gold prices fell much less than in the preceding month. Lead prices remained unchanged after falling substantially for 5 consecutive months.

The index for foods and feeds rose 0.9 percent after increasing 1.6 percent in February. Higher prices for prepared animal feeds and flour accounted for most of the March advance. Among other intermediate goods, decreases were noted for photographic supplies.

## Crude goods

The Producer Price Index for Crude Materials for Further Processing fell 3.2 percent seasonally adjusted from February to March after dropping 8.2 percent the preceding month. After a more substantial decline in the previous month, price decreases for crude energy materials slowed. The crude foodstuffs and feedstuffs index rose after showing no change in the month before. The index for crude materials other than food and energy, however, turned down following small increases in February and January. (See table B.)

During the first quarter, the index for materials at the crude stage of processing dropped at a seasonally adjusted annual rate of 30.9 percent, compared with a 14.4-percent rate of decrease in the fourth quarter of last year. Crude petroleum prices accounted for the bulk of the dramatic price changes for crude materials over the past 8 months. By the end of the first quarter, the crude goods index had returned to its pre-Gulf-crisis level as petroleum prices retreated rapidly.

The index for crude energy goods declined 7.3 percent in March in the wake of a drop of 15.9 percent in February. This index slumped at a seasonally adjusted annual rate of 52.7 percent from December to March after falling at a rate of about 20 percent in the previous quarter. The crude petroleum index moved down 15.8 percent in March, about half as much as in the previous month. The March index for natural gas also continued to recede following a more sizable decline in the preceding month. The coal index dropped more than in the month before.

Prices for crude foodstuffs and feedstuffs climbed 1.2 percent in March after remaining constant in February and decreasing 1.5 percent in January. The net result was a first quarter decline at a seasonally adjusted annual rate of 1.1 percent, less than in any of the three preceding quarters. Cattle

prices turned up in March following declines in February and January. Corn and fluid milk prices rose considerably more than in the month before. Price decreases for live chickens slowed somewhat. In contrast, the hay index declined more emphatically, falling 11.1 percent in March after a 3.7-percent drop in February. Price increases slowed for soybeans, hogs, live turkeys, wheat, and fresh fruits. Prices turned down for lambs and fresh and dried vegetables after February advances, and the unprocessed fin fish index dropped following 4 months of rising prices.

The index for crude nonfood materials less energy turned down 1.1 percent following slight increases in each of the 2 previous months. In the first quarter of 1991, the decline in the basic industrial materials index slowed to an annual rate of 2.4 percent after recording an 18.5-percent rate of decrease in the prior quarter. The raw cotton index did not change in March after surging nearly 10 percent in February. Uranium, radium, and vanadium ore prices moved down after showing no change for 2 months. After increasing in the prior month, prices for copper base scrap, construction sand and gravel, wastepaper, and silver ores turned down. In addition, indexes for aluminum base scrap, cattle hides, and lead and zinc ores fell more than in the month before. Indexes for iron and steel scrap and for copper ores, however, fell less than in February.

## Net output price indexes for mining, manufacturing, and service industries

**Mining.** The Producer Price Index for the net output of total domestic mining industries fell 5.0 percent in March, much less than in February (11.8 percent). (Net output price indexes are not seasonally adjusted.) For the 3 months ended in March, this index fell at a 41.2-percent annual rate, in sharp contrast to its skyrocketing advances during the latter part of 1990. In March, prices for the oil and gas extraction industry group declined 6.9 percent, after dropping 15.6 percent a month earlier. Prices for the metal mining industry group fell for the sixth consecutive month. In contrast to these declines, prices were unchanged for the nonmetallic industry group, following increases in both February and January. In March, the Producer Price Index for total mining industries stood at 76.7 (December 1984 = 100), 1.8 percent lower than a year earlier.

**Manufacturing.** The Producer Price Index for total domestic manufacturing industries declined 0.9 percent, the fourth consecutive monthly decrease. From December 1990 to March 1991 this index fell at a 6.7-percent annual rate, the first calendar-quarter decrease since the third quarter of 1989. In March, the industry group index for chemicals and allied products turned down 1.0 percent after 7 months of increases. The petroleum refining industry group index declined 10.4 percent, somewhat more than the decreases of over 8 percent posted in each of the previous 3 months. In contrast, increases of 0.7 percent were registered for the industry groups for leather and leather products and lumber and wood

products. Changes for most other industry groups were modest. In March, the Producer Price Index for Total Manufacturing Industries was 115.2 (December 1984=100), 2.6 percent higher than 12 months earlier.

*Services.* Among service industries, decreases occurred for

domestic deep sea transportation of freight (3.9 percent), travel agencies (2.9 percent), water transportation of freight (2.2 percent), tour operators (1.9 percent), natural gas utilities (1.7 percent), and scrap metal collection (1.0 percent). An advance of 0.8 percent was registered for line haul operations railroads.

1/ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy, excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190 of the July 1986 issue of Producer Price Indexes.

## Brief Explanation of Producer Price Indexes

Producer price indexes (PPI) measure average changes in prices received by domestic producers of commodities in all stages of processing. Most of the information used in calculating the indexes is obtained through the systematic sampling of nearly every industry in the manufacturing and mining sectors of the economy. The PPI program also includes some information from other sectors—agriculture, fishing, forestry, services, and gas and electricity. Because producer price indexes are designed to measure only the change in prices received for the output of domestic industries, imports are not included. The sample currently contains about 3,100 commodities and 75,000 quotations per month.

There are three primary systems of indexes within the PPI program: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure (table 1) organizes products by class of buyer and degree of fabrication. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products (table 5). The commodity structure (table 6) organizes products by similarity of end-use or material composition.

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC) and the Census product code extension of the SIC. Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 4 lists indexes for the net output of major mining and manufacturing industry groups at the 2-digit level. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may be represented by one to three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classi-

fied in the industry for products made primarily, but not always exclusively, within the industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, some industries also may have secondary product indexes that show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movement of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most such indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction. Even though index levels for corresponding items may differ, monthly percent changes will be identical. (See "Calculating Index Changes," below.)

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends. Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing

indexes) calculated from traditional commodity groupings, currently reflect 1982 values of shipments as reported in the Census of Manufactures and other sources. From January 1976 through December 1986, PPI weights were derived from 1972 shipment values. Industry indexes, which are based on the SIC system, continue to be calculated with 1977 net output weights.

Effective with publication of January 1988 data, many important PPI series (including all stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100, to coincide with the reference year of shipment weights. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 16, "Producer Prices," in *BLS Handbook of Methods* (1988), Bulletin 2285. Reprints are available from the Bureau of Labor Statistics on request (202-523-1221).

## Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5
Index Percent change	
Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Percent changes for 3-month and 6-month periods can be expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the rate for a given 3- or 6-month span were maintained for a 12-month period.

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the Finished

Goods Price Index, for example, is shown as 105.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

## **Seasonally Adjusted and Unadjusted Data**

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 570, available on request from BLS.)

Seasonal factors used in computing seasonally adjusted indexes are derived from the X-11 Seasonal Adjustment

Method. Annual updates replace the most recent 5 years of seasonal data, e.g., data from January 1983 through December 1987 were replaced at the beginning of 1988. Indexes for most broad commodity groupings and 8-digit individual commodities in table 6, as well as industry and Census product indexes in tables 4 and 5, do not undergo the seasonal adjustment process and, therefore, are published only as unadjusted data.

Some indexes are adjusted directly, independently of the seasonal movements of other more detailed series comprising the category in question. This is the case for all indexes in table 6 which are adjusted, as well as for certain basic stage-of-processing categories in table 1. Seasonal movements for most stage-of-processing indexes are derived indirectly by the aggregate method, which combines seasonal movements of the basic stage-of-processing categories with those of a wide variety of food and certain other subproduct class (6-digit level) series.

Direct seasonal adjustment produces a more complete elimination of seasonal movements than the aggregative method does. However, the direct seasonal adjustment process does not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonally adjusted data can also become problematic when previously stable and predictable timing patterns of pricing behavior abruptly change. If the new timing pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will be chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.
