Producer Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. (ISSN 0882-5270)

To order this periodical for 1 year, cite *Producer Price Indexes* (WPPI) and send your check for \$35.00 (\$43.75 foreign) or provide your VISA or Master card number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954.

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers directly after their subscription order is processed simply to let them know that they will receive the next available issue released for their subscription order.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington DC 20402, telephone (202) 512-1806 or FAX (202) 512-2168.

To change your address: Please send your mailing label, along with your new address to the Superintendent of Documents, Attn: Chief, Mail List Branch, Mail Stop: SSOM, Washington, DC 20402.

Price Movements

December 1995

The Producer Price Index for Finished Goods increased 0.5 percent in December on a seasonally adjusted basis. This index also rose 0.5 percent in November after edging down 0.1 percent in October. Prices received by domestic producers of intermediate goods moved up 0.2 percent in December after showing no change in the previous month. Crude material prices declined 0.2 percent following a 1.6-percent advance in November. (See table A.)

Among finished goods in December, the index for energy goods turned up 3.3 percent following a 0.5-percent decrease a month earlier. Price increases for finished consumer foods slowed from 1.2 percent in November to 0.1 percent in December. Prices for finished goods other than foods and energy increased 0.1 percent, following an advance of 0.4 percent in November.

Before seasonal adjustment, the Producer Price Index for finished goods increased 0.3 percent in December to 129.0 (1982=100). From December 1994 to December 1995, the Finished Goods Price Index rose 2.2 percent after increasing 1.7 percent in calendar year 1994. The finished energy goods index moved up 0.9 percent in 1995 after a rise of 3.5 percent the year before. Prices for finished consumer foods advanced 1.9 percent in 1995 after increasing 1.1 percent in 1994. The index for finished goods other than foods and energy rose 2.5 percent in 1995 following a 1.6-percent

rise a year earlier. The majority of this acceleration can be attributed to sanitary paper products, alcoholic beverages, and tobacco products. At the earlier stages of processing, prices received by domestic producers of intermediate goods increased 3.3 percent after advancing 4.4 percent in 1994. The index for crude materials turned up 4.1 percent in 1995 after dipping 0.5 percent in the previous year.

Finished goods

The Producer Price Index for finished energy goods advanced 3.3 percent in December, seasonally adjusted, following 6 consecutive months of decline. Gasoline prices increased 11.8 percent in December after falling 3.8 percent in November. In December, prices also turned up after decreasing a month earlier for residential natural gas. Price increases for home heating oil accelerated from 7.3 percent in November to 11.0 percent in December. By contrast, prices turned down after increasing in the previous month for residential electric power.

Prices for finished consumer foods edged up 0.1 percent. The December slowdown in price increases was led by a downturn in prices for finfish and shellfish, beef and veal, and for fresh fruits and melons, all of which had increased in November. Price increases slowed markedly from November.

¹ Some percent changes shown here and elsewhere in "Price Movements December 1995" may differ from those previously reported because indexes for August 1995 have been recalculated to incorporate late reports and correc-

tions by respondents. All indexes are subject to revision 4 months after original publication.

The index for consumer goods other than foods and energy inched up 0.1 percent in December, following a 0.4-percent advance in November. From December 1994 to December 1995, this index increased 2.7 percent after rising 1.4 percent in the previous year. In December, price increases for passenger cars slowed to 0.2 percent from 1.3 percent in November. Prices also rose less than a month earlier for light trucks, prescription drugs, books, newspapers, and for lawn and garden equipment. Indexes turned down after rising in the previous month for cosmetics, household appliances, periodicals, soaps and detergents, and for tires and tubes. By contrast, prices turned up after falling in November for women's apparel and household glassware. The indexes for sanitary papers and health products and for mobile homes rose more rapidly in December than they had a month earlier. Prices continued to rise modestly for over-the-counter drugs.

The capital equipment index edged up 0.1 percent in December, following a 0.4-percent advance in November. Prices for capital goods were 2.2 percent higher in December 1995 than a year earlier, compared with a 2.0-percent increase in 1994. In December, price increases for light trucks slowed from 1.6 percent in November to 0.8 percent; prices also rose less than in the previous month for agricultural machinery and equipment, paper industries machinery, pumps and compressors, railroad equipment, and textile machinery. Price indexes declined more in December than a month earlier for heavy trucks and electronic computers. Prices turned down after rising in November for communication equipment, tools and dies, transformers, mining machinery, and metal forming machine tools. By contrast, price increases accelerated for civilian aircraft. Prices turned up after moving down in November for construction machinery and metal cutting machine tools.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components increased 0.2 percent, seasonally adjusted, after remaining unchanged in the previous month. The index for energy goods rose more than it had a month earlier. By contrast, the index for foods and feeds rose less than in November, and prices for both nondurable and durable manufacturing materials fell more than they had a month ago. In addition, the index for construction materials fell the same as in November. Excluding food and energy prices, the index for intermediate materials declined 0.4 percent after falling 0.2 percent a month earlier. (See table B.)

The index for intermediate energy goods increased 2.7 percent in December after rising 1.1 percent a month earlier. From December 1994 to December 1995, this index increased 1.1 percent, about a third of its rise in 1994. The December increase was led by the index for gasoline which turned up 11.8 percent after falling 3.8 percent in the previous month. Prices for both jet and diesel fuels rose more than in November. In contrast, the index for industrial electric power declined 0.2 percent after rising 1.1 percent a month earlier. Prices for commercial electric power also turned down after rising in the prior month. Indexes for natural gas to electric utilities and both commercial and industrial natural gas rose less than the previous month.

The advance in the index for intermediate foods and feeds slowed to 1.2 percent from 2.4 percent in the previous month. December was the seventh consecutive monthly increase for this index. After falling 4.5 percent in 1994, this index turned up 10.3 percent in 1995. The December deceleration was led by the prepared animal feeds index which rose 3.6 percent after increasing 5.3 percent in November. Prices for liquid milk products also rose less than a month earlier.

Indexes for beef and veal, confectionery materials, and butter turned down after rising in the prior month. The index for pork, however, turned up 2.3 percent after falling 1.3 percent a month ago. Prices for crude vegetable oils fell less than in November. In addition, indexes for dry milk products and refined sugar rose more than in the prior month.

The index for nondurable manufacturing materials fell 1.0 percent after decreasing 0.9 percent in November. This index increased 5.8 percent in 1995 following a 10.4-percent advance in 1994. In December, price declines for intermediate basic organic chemicals, leather, paperboard, woodpulp, and primary basic organic chemicals, outweighed increases for fertilizer materials, miscellaneous inorganic chemicals, and synthetic fibers.

The index for durable manufacturing materials fell 0.7 percent after decreasing 0.6 percent in November. This index advanced 1.0 percent from December 1994 to December 1995 following an increase of 9.8 percent in calendar year 1994. In December, prices for plywood, building paper and board, aluminum, and silver fell, while prices increased for copper and brass mill shapes, lead, zinc, and gold.

The index for construction materials fell 0.3 percent for the third consecutive month. Over the year, these prices moved up 1.9 percent after rising 3.9 percent in 1994. In December, price declines for softwood lumber, plywood, millwork, and plastic construction products more than offset increases for air conditioning and refrigeration equipment, wiring devices, plumbing fixtures and brass fittings, nonfluid power metal valves, and cement.

Crude goods

The Producer Price Index for Crude Materials declined 0.2 percent in December, after rising 1.6 percent in November. Prices for foods and feeds declined after rising a month earlier. Prices for crude energy materials, however, increased slightly less than in the prior month, and the basic industrial materials index declined less than it had in the previous month. (See table B.)

After rising 3.6 percent in November, the index for foods and feeds declined 0.9 percent in December. From December 1994 to December 1995, this index increased 12.9 percent, after declining 9.4 percent in 1994. In December, prices for slaughter cattle turned down 3.2 percent after rising 3.0 percent a month earlier. Indexes for slaughter broilers, unprocessed finfish, slaughter turkeys, and corn turned down after rising in the previous month. By contrast, prices for slaughter hogs turned up 8.0 percent in December after a 9.1-percent decline a month earlier. Indexes for hay and for fresh and dry vegetables turned up after falling in November.

The rise in the crude energy materials index was 1.5 percent in December, about the same as a month earlier. This index remained virtually unchanged for the second consecutive year. In December, price increases for crude petroleum and coal outweighed a decline for natural gas to pipelines.

The crude nonfood materials less energy index fell 1.1 percent in December after declining 2.1 percent in the prior month. December was the sixth consecutive monthly decline. This index fell 4.6 percent from December 1994 to December 1995 after rising 17.3 percent in the prior year. In December, the index for iron and steel scrap fell 0.3 percent after a 4.4-percent decline in November. Price decreases for wastepaper, cattle hides and aluminum base scrap also slowed from a month ago. By contrast, prices for raw cotton and silver ores turned down after increasing in November. The copper base scrap index fell more than it had in the previous month. In addition, the index for copper ores rose less than it had a month earlier.

Net output price indexes for mining, manufacturing, and other industries

Mining. The Producer Price Index for the net output of total domestic mining industries increased 1.3 percent in December after rising 2.0 percent in November. (Net output price indexes are not seasonally adjusted.) In December, prices for the oil and gas extraction industry group moved up 1.7 percent following a 3.6-percent advance in the preceding month. Price indexes turned down after increasing a month earlier for the metal mining and anthracite mining industry groups. However, prices turned up after falling in November for the bituminous coal and lignite mining and for the nonmetallic minerals mining industry groups.

After falling 2.6 percent in 1994, the Producer Price Index for total mining decreased 0.8 percent in 1995, chiefly reflecting lower prices for oil and gas extraction and for nonmetallic mineral mining. In December 1995, the index for total domestic mining stood at 71.4 (December 1984=100).

Manufacturing. The Producer Price Index for total domestic manufacturing industries increased 0.2 percent in December, the same as in November. Prices for the petroleum refining industry group turned up 3.3 percent after 2 months of decline. Among other domestic manufacturing industries in December, modest increases were registered for the industry groups for food and kindred products, textile mill products, furniture and fixtures, printing and publishing, and measuring instruments. Prices declined for the industry groups for lumber and wood products, paper and allied products, rubber and plastic products, and primary metal industries.

The index for the net output of the domestic manufacturing sector stood at 125.3 in December, 3.0 percent higher than its level a year earlier. In 1994, this index increased 2.4 percent. In 1995, all categories increased in price except for lumber and wood products, which moved down 2.6 percent. The largest increase (13.1 percent) was for the paper and allied products industry group. The next larger increases were for the industry groups for printing and pub-

lishing (6.8 percent) and chemicals and allied products (5.7 percent). Increases for the other industry groups were all less than 3.5 percent in 1995.

Other. Among other industries in December, the largest declines were for wastepaper collection; travel agencies; medical laboratories; water transportation of freight, not elsewhere classified; and metal scrap collection. Increases occurred for natural gas utilities, deep sea domestic transpor-

tation of freight, and freight transportation arrangement.

Over the year, the largest decreases were in the indexes for waste paper collection (51.7 percent), travel agencies (8.3 percent), and metal scrap collection (6.9 percent). Advances were registered for scheduled air transportation (10.7 percent); local trucking with storage (10.7 percent); United States Postal Service (10.4 percent); water transportation of freight, not elsewhere classified (8.9 percent); and passenger car rental (7.9 percent).

PPI Weights to be Updated

The Bureau of Labor Statistics will soon update the value weights used to calculate Producer Price Indexes to more accurately reflect recent production and marketing patterns. The new weights, which will be introduced next month when January 1996 index data are released, will be based on shipment values from the year 1992. These value weights come from the *Census of Manufactures*, the *Census of Mining*, the *Census of Services*, and the *Census of Agriculture*. PPI weights have been based upon 1987 census shipment values since January 1992.

All indexes will be affected by this weight update, including all the industry net output indexes, as well as those calculated from traditional commodity groupings. In addition, weights will be updated from the 1987 to the 1992 census for all stage-of-processing indexes, net output of industry by stage of process indexes, durability of product indexes, and special commodity-grouping indexes. This weight revision will not change the reference base, in most cases 1982=100, of the PPI index system.

Also with the publication of January data on February 27,

SIC classified indexes will reflect updated input/output (I/O) ratios based on the 1987 Input-Output Account of the Bureau of Economic Analysis (BEA). These I/O ratios, which represent the proportion of each industry's output consumed outside the industry, will be updated from those reflected in BEA's 1977 Input-Output Account. The commodity grouping indexes will not be affected.

It is important to note that the PPI classification system and aggregation structure will not change as a result of the weight revisions discussed above. The weight update, however, will result in significant shifts in the relative importance of various industries and products, and these shifts will affect future aggregate indexes in a manner commensurate with the relative gains and losses in value weights from 1987 to 1992.

The relative importance data through December 1995 will be available on February 23, 1996. They are based on the 1987 and 1992 weighting schemes. To request this information, call the Division of Industrial Prices and Price Indexes, Section of Index Analysis at (202) 606-7705.

Recalculated Seasonal Adjustment Factors to be Available on February 23, 1996

Each year with the release of PPI data for January, seasonal adjustment factors are recalculated to reflect price movements from the just-completed calendar year. This routine annual recalculation may result in revisions to seasonally adjusted indexes for the previous 5 years. The recalculated seasonal adjustment factors customarily have been available around the time of the release of the January data in February. This year, the following information will be available on February 23, 2 work days prior to the release of PPI data for January 1996 on February 27:

- 1996 factors for seasonally adjusted commodity indexes.
- A table of changes of seasonal status of commodity indexes. Recalculated seasonal factors for the last 5 years (1991-95) for stage-of-processing indexes.

- Recalculated seasonal factors for the last 5 years (1991-95) for stage-of-processing indexes.

For the overall and less food and energy finished goods, intermediate materials, and crude materials indexes, a table containing the following information for the previous 2 years (1994 and 1995):

- Former and revised seasonally adjusted indexes,
- Former and revised seasonally adjusted percent changes,
- Former and recalculated seasonal factors.

To request any of this information, call the Division of Industrial Prices and Price Indexes, Section of Index Analysis at (202) 606-7705.

Effect of Government Shutdown on December 1995 PPI Data

Collection and processing of December Producer Price Index data were interrupted because the Bureau of Labor Statistics was shutdown for parts of December and January due to a lapse in funding. The December PPI data collection forms were mailed to respondents prior to the shutdown. Respondents completed the forms, reporting their prices as of December 12, and mailed them back to the Bureau during the shutdown. Processing of the collected data commenced after the shutdown, which was extended by a weather-related closing. The delay in the processing of the data resulted in BLS receiving a slightly higher than normal percentage of returned survey forms, enhancing the sampling reliability of the December PPI.

The shutdown also delayed the mailing of January data collection forms until January 19, which was after the scheduled January 9 pricing date. This created the possibility that

respondents might report price changes for January that should be included in the February PPI. To lessen this possibility, a note reminding respondents to report prices as of January 9 was included with the survey forms. The processing period for January forms has been shortened to minimize the delay in the January release, which is now scheduled for February 27 (originally scheduled for February 13). BLS will assess the effect of late mailing of data collection forms on the January PPI release and advise users accordingly.

The delayed collection and processing of January data will result in a slight delay in the collection of February data. However, the delay is expected to have no appreciable effect on February PPI data, which will be released as originally scheduled on March 14.

¹ Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. The first-published and final December relative importances initially appear, respectively, in the release tables containing January and May data.

² The indexes for August 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.

³ Includes crude petroleum.

⁴ Excludes crude petroleum.

⁵ Percent of total finished goods.

⁶ Percent of total intermediate materials.

⁷ Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

⁸ Percent of total crude materials.

¹ Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly-titled indexes which are derived from traditional commodity groupings shown in table 6.

² The indexes for August 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

¹ These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

² The indexes for August 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision four months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370104, 034, 03810169, 03810272, 03810274, 03810298, 03820135, 03820303, 03830324, 03830325 and 1231

Hosiery: 03810169, 03810171, 03810272, 03810273, 03810363, and 03810365

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Synthetic paint resins: 06220132, 066207, and 06620903

Volatile paint liquids: 06140141, 06140202, 06140341, 06140356, 06220306, 06220308, 06220309, and 06220311

Lumber and plywood: 081 and 083

Iron ore pellets, all areas: 10110201, 10110202, and 10110301

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Stainless steel mill products: 10170293, 10170351, 10170359, 10170453, 10170454, 10170461, 10170551,

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 10-3 through 10-8

Copper and copper products: 10210201, 10220107, 10220123, 10220162, 102301, 10240301, 10240302, 10240304, 10240305, 102502, 10260314, 10260317, 10260325, 10280301, 10280302, and 10280303

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 115, 116, 118, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 11115211 and 111251

Metalworking machinery: 113A, 1132, 113304, 1137, and 1138

Total tractors: 1111 and 1128 less 11115211, 112802, and 112803

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 11115211 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 11115211

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

¹ Indexes in this tables are derived from the primary indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as comprehensive measures of changes in construction costs. See note on page 190

of the July 1986 issue of *Producer Price Indexes*.

¹ Indexes in this table are derived from the product indexes in table 5. These indexes are composed of the goods used by the industries in each of the industry stage of process output indexes as shown by the 1977 input/output relationships. These material inputs include only domestic material input and do not include any imported materials which may be used.

² The indexes for August 1995 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Brief Explanation of Producer Price Indexes

Producer Price Indexes (PPI) measure average changes in prices received by domestic producers of commodities in all stages of processing. Most of the information used in calculating the indexes is obtained through the systematic sampling of nearly every industry in the manufacturing and mining sectors of the economy. The PPI program also includes some information from other sectors—agriculture, fishing, forestry, services, and gas and electricity. Because producer price indexes are designed to measure only the change in prices received for the output of domestic industries, imports are not included. The sample currently contains about 3,200 commodities and 80,000 quotations per month.

There are three primary systems of indexes within the PPI program: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure (table 1) organizes products by class of buyer and degree of fabrication. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products (table 5). The commodity structure (table 6) organizes products by similarity of end-use or material composition.

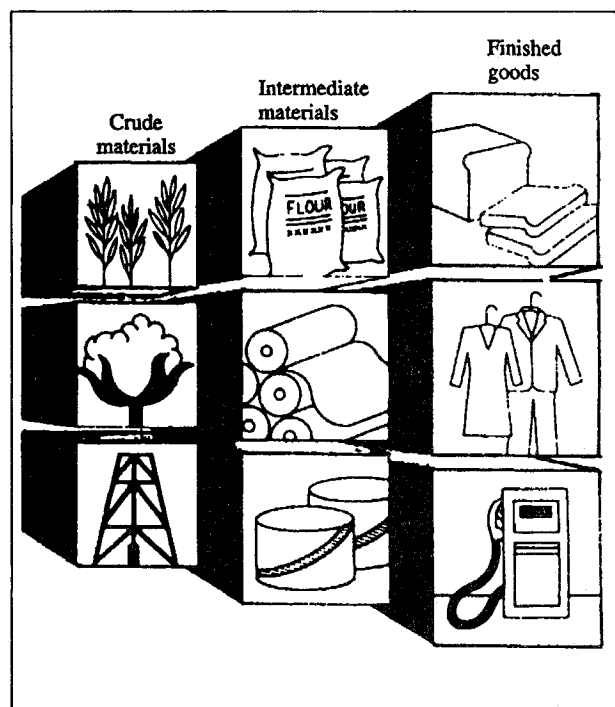

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manu-

factured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Producer Price Indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC) and the Census product code extension of the SIC. Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 4 lists indexes for the net output of major mining and manufacturing industry groups at the 2-digit level. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may be represented by one to three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments class-

fied in the industry for products made primarily, but not always exclusively, within the industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, some industries also may have secondary product indexes that show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movement of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most such indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing

indexes) calculated from traditional commodity groupings currently reflect 1987 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1987 through December 1991, PPI weights were derived from 1982 shipment values. Many industry indexes which are based on the SIC system, continue to be calculated with 1987 net output weights.

Effective with publication of January 1988 data, many important PPI series (including all stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100, to coincide with the reference year of shipment weights. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 16, "Producer Prices," in BLS Handbook of Methods (1992), Bulletin 2414 and Reprints are available from the Bureau of Labor Statistics on request (202-606-7705).

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than as changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The computation of index point and percent changes is shown in the box.

| | |
|-------------------------------|-----------|
| <i>Index point change</i> | |
| Finished Goods Price Index | 107.5 |
| Less previous index | 104.0 |
| Equals index point change | 3.5 |
| <i>Index percent change</i> | |
| Index point change | 3.5 |
| Divided by the previous index | 104.0 |
| Equals | 0.034 |
| Results multiplied by 100 | 0.034x100 |
| Equals percent change | 3.4 |

Percent changes for 3-month and 6-month period can be expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the rate for a 12-month period.

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An in-

crease of 5.5 percent from the reference period in the Finished Goods Price Index for example, is shown as 105.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists; and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, 1991 edition, available on request from BLS.)

Seasonal factors used in computing seasonally adjusted indexes are derived from the X-11 Seasonal Adjustment Method. Annual updates replace the most recent 5 years of

seasonal data, e.g., data from January 1987 through December 1991 were recalculated at the beginning of 1992. Indexes for most broad commodity groupings and 8-digit individual commodities in table 6, as well as industry and Census product indexes in tables 4 and 5, do not undergo the seasonal adjustment process and, therefore, are published only as unadjusted data.

Some indexes are adjusted directly, i.e., independently of the seasonal movements of other more detailed series comprising the category in question. This is the case for all indexes in table 6 which are adjusted, as well as for certain basic stage-of-processing categories in table 1. Seasonal movements for most stage-of-processing indexes are derived indirectly by the aggregate method, which combines movements of the basic stage-of-processing categories with those of a wide variety of food and certain other subproduct class (6-digit level) series.

Direct seasonal adjustment produces a more complete elimination of seasonal movements than the aggregative method does. However, the direct seasonal adjustment process does not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonally adjusted data can also become problematic when previously stable and predictable timing patterns of pricing behavior abruptly change. If the new timing pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will be chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.
