# Price Movements May 2000

**T**he Producer Price Index for Finished Goods showed no change in May, seasonally adjusted. This followed a 0.3-percent decrease in April and a 1.0-percent gain in March. The index for finished goods other than foods and energy rose 0.2 percent, after increasing 0.1 percent for 2 consecutive months. Prices received by producers of intermediate goods fell 0.1 percent, the same rate as last month. The crude goods index turned up 3.2 percent, following a 2.5-percent decline a month earlier. (See table A.)

Among finished goods, the rate of decline in prices for finished energy goods slowed from 4.1 percent in April to 0.5 percent in May. The index for finished consumer goods excluding foods and energy rose 0.2 percent in May, after edging up 0.1 percent in the previous month. By contrast, the index for finished consumer foods turned down 0.2 percent, following a 1.0-percent gain a month ago. Capital equipment prices increased 0.1 percent, after rising 0.2 percent in April.

Before seasonal adjustment, the Producer Price Index for Finished Goods increased 0.4 percent to stand at 137.5 (1982=100). From May 1999 to May 2000, prices for finished goods gained 3.9 percent. Over the preceding 12 months, the index for finished energy goods increased 18.1 percent, finished goods other than foods and energy advanced 1.5 percent, and finished consumer foods rose 2.6 percent. Prices received by producers of intermediate goods increased 5.0

percent for the 12 months ended in May, and the index for crude goods advanced 18.5 percent during the same period.

## Finished goods

Prices for finished energy goods fell 0.5 percent in May, after dropping 4.1-percent in April. The most significant contribution to May's decline was a 12.1-percent drop in liquefied petroleum gas prices. Additional downward pressure on energy prices can be traced to a 0.5-percent decrease in

the heavily weighted residential electric power index. By contrast, price increases were registered for gasoline, residential natural gas, home heating oil, and finished lubricants.

In May, the index for finished consumer goods other than foods and energy moved up 0.2 percent, after rising 0.1 percent for 2 consecutive months. Price increases for passenger cars, sanitary papers and health products, book publishing, light motor trucks, cosmetics, and women's apparel outweighed declining prices for prescription drugs, alcoholic beverages, household appliances, passenger car radial tires, and for girls', children's, and infants' apparel.

Prices received by producers of finished consumer foods turned down 0.2 percent in May, after posting a 1.0-percent gain in April. The index for eggs for fresh use fell 17.9

percent, following a 41.6-percent advance in the prior month. Prices for finfish and shellfish, pork, processed young chickens, and processed turkeys also turned down, after rising a month earlier. The indexes for dairy products and for beef and veal rose less than in the previous month. By contrast, prices for fresh and dry vegetables advanced 12.1 percent in May, following a 2.5-percent gain in April. The indexes for roasted coffee and for fresh fruits and melons turned up, after falling in the prior month. Soft drink prices exhibited a greater rate of increase than in April.

The capital equipment index moved up 0.1 percent in May, after registering a 0.2 percent increase in April. Advancing prices for light motor trucks, communication equipment, commercial furniture, civilian aircraft, agricultural machinery, and for pumps and compressors slightly outweighed falling prices for electronic computers, x-ray and electromedical equipment, heavy motor trucks, and construction machinery.

### Intermediate goods

A 1.4-percent decline in prices for intermediate energy goods was the main factor behind a 0.1-percent decrease in the Producer Price Index for Intermediate Materials, Supplies, and Components. Prices for materials and components for construction and durable manufacturing materials also fell in May. By contrast, both the index for nondurable manufacturing materials and the index for intermediate foods and feeds posted increases of 0.7 percent in May. Excluding foods and energy, the index for intermediate materials advanced 0.1 percent, following a 0.4-percent gain a month earlier. (See table B.)

The intermediate energy goods index decreased 1.4 percent in May, after registering a 2.9-percent decline in April.

In May, falling prices for industrial electric power, commercial electric power, jet fuels, liquefied petroleum gas, and diesel fuel outweighed rising prices for gasoline, commercial natural gas, industrial natural gas, and residual fuel.

The index for materials and components for construction decreased 0.3 percent in May, after posting a 0.1-percent gain in April. Plywood prices declined 6.4 percent, following a 0.8-percent advance in the prior month. The index for softwood lumber fell more than a month earlier. Prices for steel wire, plumbing fixtures and brass fittings, and wiring devices turned down, after increasing a month ago. Conversely, the index for nonferrous wire and cable rose 0.6 percent in May, following a 0.7-percent drop in April. Prices for fabricated ferrous wire products also turned up, after decreasing in the previous month. The index for plastic construction products showed no change, following a decline in April. Cement prices fell less than a month earlier.

The index for durable manufacturing materials dropped 0.2 percent in May, after registering a 0.3-percent gain in April. Prices for hot rolled sheet and strip decreased 0.2 percent, following a 2.2-percent advance in the prior month. The indexes for plywood and for building paper and board also declined, after increasing a month ago. Prices for semi-finished steel mill products, cold finished bars, and flat glass rose less than a month earlier. The aluminum index fell more than in the previous month. By contrast, prices for cold rolled sheet and strip gained 1.9 percent, following a 1.1-percent advance in April. The indexes for cement and aluminum mill shapes decreased less than in the prior month.

A 4.2-percent rise in prices for plastic resins and materials was the key contributor to a 0.7-percent increase in prices for nondurable manufacturing materials. The indexes for primary basic organic chemicals, paper, nitrogenates, paint materials, synthetic fibers, and processed yarns and threads also

advanced in May. On the other hand, prices for intermediate organic chemicals, basic inorganic chemicals, medicinal and botanical chemicals, paperboard, and woodpulp declined.

The intermediate foods and feeds index increased 0.7 percent in May, after registering a 0.8-percent gain in April. A 2.2-percent rise in the prepared animal feeds index led this month's advance in prices for intermediate foods and feeds. Other price increases were posted for beef and veal, fluid milk products, sausages and breakfast links, refined sugar, and for natural, processed, and imitation cheese. By contrast, prices for pork, liquid beverage bases, crude vegetable oils, confectionery materials, and flour declined in May.

### Crude goods

The Producer Price Index for Crude Materials for Further Processing turned up 3.2 percent in May, seasonally adjusted, after declining 2.5 percent in April. Prices for crude energy materials also rose, after falling in the prior month. The index for basic industrial materials fell less than a month ago.

By contrast, prices for crude foodstuffs and feedstuffs fell, after rising in the previous month. (See table B.)

Leading the way, the index for crude petroleum gained 21.6 percent, following a 23.7-percent drop in the previous month. Coal prices rose, after falling in April. On the other hand, the natural gas index increased 3.1 percent, following an 8.7-percent advance last month.

Basic industrial material prices declined 0.3 percent in May, following a 1.2-percent decrease in April. Falling prices for iron and steel scrap, aluminum base scrap, copper ores, and for softwood logs, bolts, and timber outweighed rising prices for wastepaper, raw cotton, cattle hides, and for construction sand, gravel, and crushed stone.

Prices for crude foodstuffs and feedstuffs fell 1.8 percent in May, after rising 1.7 percent in April. The slaughter hogs index dropped 15.5 percent, following a 6.5-percent advance a month earlier. Prices for slaughter broilers and fryers, slaughter cattle, fluid milk, and unprocessed finfish also fell, after rising in April. <sup>1</sup> Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

## Brief Explanation of Producer Price Indexes

The term Producer Price Index (PPI) refers to a family of indexes that measure the average change over time in the selling prices received by domestic producers of goods and services. The PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI); CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices may differ due to government subsidies, sales and excise taxes, and distribution costs.

Over 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the transportation, utilities, trade, finance, and services sectors of the economy.

Over 100,000 price quotations per month are organized into 3 sets of producer price indexes: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

### Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances; and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton

yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

### Commodity Indexes

The commodity classification structure of the Producer Price Index organizes products by similarity of end use or material composition, regardless of their industry of origin. Fifteen major commodity groupings (2-digit level) make up the all commodities index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit).

Nearly all 8-digit commodities under the traditional com-

modity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes are identical to movements of their counterparts. Therefore, monthly percent changes for corresponding indexes will be virtually identical even though their respective index levels may differ.

## Industry Net-Output Price Indexes

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC). Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movement of the latter indexes are calculated on the basis of movement of their counterparts in table 5. Although most of these indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

## Data Collection

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The Bureau of Labor Statistics (BLS) strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential

basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

## Weights

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings, currently reflect 1992 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1992 through December 1995, PPI weights were derived from 1987 shipment values. Industry indexes shown in table 5 are also now calculated with 1992 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

## Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any changes to previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. Reprints are available from the Bureau of Labor Statistics on request.

## Calculating Index Changes

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the finished goods price index, for example, is shown as 105.5. This change can also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

### *Index point changes*

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

### *Index percent change*

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	$0.034 \times 100$
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted, as well as unadjusted changes, each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy, because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information which can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide*

for Contracting Parties, BLS Report 807, September 1991, available on request from BLS.)

In most cases, seasonal factors used in computing seasonally adjusted indexes have, in the past, been derived using the X-11-ARIMA Seasonal Adjustment Method. However, the PPI program upgraded to X-12 beginning in 1998. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior.<sup>1</sup> For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through the aggregative method, which combines movements of a wide variety of subproduct class (6-digit level) series.<sup>2</sup>

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Beginning in January 1988, the PPI used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

<sup>1</sup> Note that most broad commodity groupings and 8-digit individual commodities, as well as industry and census product indexes are not seasonally adjusted and are, therefore, not included in this annual review.

<sup>2</sup> Tests previously conducted on the stage-of-processing indexes did not find significant residual seasonality.

## Producer Price Index Data Via the Internet

The Bureau of Labor Statistics has made producer price index series and news releases available via the Internet. BLS provides Internet access through a World Wide Web (WWW) homepage and a file transfer protocol (FTP) service.

### Retrieving PPI data from the BLS WWW site

Among other things, the BLS WWW site offers news releases and most PPI historical data. Enter the BLS homepage address <http://stats.bls.gov> using a WWW browser. After clicking the "Data" button on the homepage, there are 6 ways to retrieve PPI data.

- **Most Requested Series** is a form-based application which allows the user to quickly obtain PPI time series data by selecting from a list of the most commonly requested time series, including "all commodities" and the stage-of-processing indexes (e.g., finished goods). Within each list, any one or all of the time series shown can be selected. The user can choose date ranges and output options prior to executing the query.

- **Selective Access** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides the user through the PPI classification system by listing index titles and does not require use of commodity or industry (SIC) codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. The user can choose date ranges and output options prior to executing the query.

- **News Releases** contains the most current press release produced by the PPI program. The release contains text explanations of aggregate index movement provided by PPI economists. It also contains pre-formatted data, including most aggregates and selected commodity indexes.

- **Series Report** is a form-based application which uses PPI time series identifiers (commodity or SIC codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

For PPI data, there are two basic formats to identify specific time series. For commodity codes and stage-of-processing codes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted). For industry product codes, enter a "pcu" prefix and a "#" between the fourth and fifth characters of the product code. *In both cases, no spaces are required.*

*Example:*

Commodity code	Will provide data for:
wpusop3000	Finished goods, not seasonally adjusted
wps063	Drugs and pharmaceuticals, seasonally adjusted
Product code	Will provide data for:
pcu28__#	Chemicals and allied products, not seasonally adjusted
pcu3711#111	Passenger cars, not seasonally adjusted

Note that the first product code uses two underscores as placeholders to complete the reference to a two-digit product code time series.

- **FTP Site.** Given limitations on the amount of data users can extract from applications provided on the BLS WWW site, the FTP server is best suited for those requiring access to either a large volume of time series data or other PPI related documentation (e.g., seasonal factor and relative importance tables). For increased efficiency, it is suggested that users download files without opening, if their Internet browser permits. Enter <ftp://ftp.bls.gov> to access the FTP site.

Data and documentation available for download include:

	Directory:
• SIC current series	<a href="#">/pub/time.series/pc</a>
• SIC discontinued series	<a href="#">/pub/time.series/pd</a>
• Commodity series	<a href="#">/pub/time.series/wp</a>
• Special requests	<a href="#">/pub/special.requests/ppi</a>
• Latest news release	<a href="#">/pub/news.release/ppi.txt</a>

The FTP site maintains files to help with searches and downloads. These files are centrally located in the [/pub/doc](#) directory. Within this directory, go to the [overview.doc](#) file for an overview relating to all BLS data available through the FTP site. For *commodity-based PPI data* (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report), the program help file is [wp.doc](#). For *industry-based PPI data* (which appear in tables 4, 5, 9, 10, and 11 of the monthly PPI report), the file is [pc.doc](#). For industry-based time series that have been discontinued, go to [pd.doc](#). (These and other help files are also maintained within each of the five directories listed above.)

- **Economy at a Glance** is a table which contains current data on various economic indicators produced by BLS. The user can also view these key time series graphically.
