# Price Movements July 2000

The Producer Price Index for Finished Goods showed no change in July, seasonally adjusted. This index posted a 0.6-percent advance in June and showed no change in May. The index for finished goods other than foods and energy edged up 0.1 percent in July, after falling 0.1 percent a month ago. Prices received by manufacturers of intermediate goods registered a 0.2-percent gain, following a 0.9-percent advance a month earlier. The crude goods index decreased 1.1 percent, after rising 5.8 percent in June. (See table A.)

Prices for finished energy goods turned down 0.7 percent, after rising 5.1 percent in the previous month, and caused July's deceleration in the finished goods index. By contrast, the index for consumer goods other than foods and energy edged up, following a small decline in June. Finished consumer food prices showed no change in July, after falling 0.3 percent in the prior month. The capital equipment index rose, following no change a month ago.

Before seasonal adjustment, the Producer Price Index for Finished Goods fell 0.1 percent in July to stand at 138.3 (1982=100). From July 1999 to July 2000, a 19.2-percent advance in prices for finished energy goods led the 4.1-percent increase for the finished goods index. During the same period, prices for finished goods other than foods and energy

rose 1.5 percent, and prices for finished consumer foods increased 2.1 percent. Prices received by manufacturers of intermediate goods rose 5.0 percent for the 12 months ended in July, and the index for crude goods advanced 23.4 percent for the same period.

## Finished goods

The finished energy goods index fell 0.7 percent in July, after posting a 5.1-percent gain in June. Most of the deceleration in prices for finished energy goods can be attributed to a downturn in the gasoline index, which decreased 9.1 percent following an 11.8-percent advance last month.

Prices for liquefied petroleum gas rose less than in June. The index for home heating oil turned down, after rising in the prior month. By contrast, prices for residential electric power turned up 2.0 percent in July, following a 0.7-percent decline in June. The index for residential natural gas rose at a faster rate than a month ago.

The index for finished consumer goods other than foods and energy posted a 0.1-percent gain in July, after declining at the same rate in June. Prices for cigarettes showed no change, following a 1.8-percent decrease in the prior month. The rate

The index for finished consumer foods was unchanged in July, after posting a 0.3-percent decrease in June. In July, price increases for dairy products, pork, bakery products, and finfish and shellfish offset falling prices for eggs for fresh use, beef and veal, processed young chickens, and soft drinks.

The capital equipment index edged up 0.1 percent in July, after showing no change in the prior month. Rising prices for civilian aircraft, office and store machines and equipment, truck trailers, and industrial material handling equipment slightly outweighed falling prices for passenger cars, communication and related equipment, heavy motor trucks, and light motor trucks.

### Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components rose 0.2 percent, after advancing 0.9 percent in June. Most of this deceleration can be attributed to prices for intermediate energy goods, which increased 0.5 percent in July and 4.7 percent in June. Prices for intermediate foods and feeds turned down, after rising in the

previous month. The index for materials and components for construction fell more than it did a month ago. By contrast, prices for nondurable manufacturing materials advanced 0.9 percent, following a 0.6-percent increase a month earlier. The index for durable manufacturing materials rose, after falling in June. Marking the 17th consecutive increase, the index for intermediate materials other than foods and energy advanced 0.2 percent in July. (See table B.)

Prices for intermediate energy goods rose 0.5 percent in July, after advancing 4.7 percent in June. Rising prices for industrial electric power, commercial natural gas, jet fuels, industrial natural gas, commercial electric power, diesel fuel, and residual fuel outweighed falling prices for gasoline.

The intermediate foods and feeds index turned down 0.7 percent in July, after registering a 0.4-percent gain in June. The index for prepared animal feeds fell 1.7 percent, following a 0.7-percent increase in the prior month. Prices for flour and for beef and veal also turned down, after rising in the previous month. The crude vegetable oils index fell more than it did a month earlier. Conversely, prices for fluid milk products advanced 1.6 percent, after edging up 0.1 percent a month ago. The indexes for pork and for natural, processed, and imitation cheese also rose more than in the prior month.

The index for materials and components for construction decreased 0.3 percent in July, after a 0.1-percent decline in June. Softwood lumber prices fell 3.3 percent, following a 0.8-percent drop in the prior month. The indexes for plastic construction products, heating equipment, and air conditioning and refrigeration equipment turned down, after rising in the previous month. Prices for asphalt felts and coatings rose less than they did a month ago. By contrast, the index for wiring devices rose 0.2 percent, after falling 0.3 percent a month earlier. Prices for fabricated structural metal products, nonferrous wire and cable, and plywood fell less than in the prior month.

Prices for nondurable manufacturing materials increased 0.9 percent in July, after posting a 0.6-percent rise in June. The industrial chemicals index advanced 2.5 percent, following a 0.9-percent gain in the prior month. Prices for gray fabrics, phosphates, and processed yarns and threads turned up, after falling in the previous month. On the other hand, the plastic resins and materials index turned down 0.3 percent, following a 0.8-percent gain a month ago. Prices for medicinal and botanical chemicals and inedible fats and oils also fell, after rising a month earlier. Paperboard prices rose less than in the prior month.

The durable manufacturing materials index increased 0.1 percent in July, after falling 0.2 percent in June. Prices for aluminum, except extrusion billet, gained 2.9 percent, following a 1.1-percent rise in the previous month. The indexes for aluminum mill shapes, copper and brass mill shapes, and cold rolled sheet and strip rose, after falling a month ago. Flat glass prices rose more than in the prior month. By contrast, the hot rolled sheet and strip index dropped 0.8 percent, following a 0.3-percent decline a month earlier. Prices for gold and platinum turned down, after rising in June. The silver index fell, after showing no change in the previous month.

### Crude goods

The Producer Price Index for Crude Materials for Further Processing declined 1.1 percent in July, after posting a 5.8-percent advance in June. A slower rate of increase for crude energy materials accounted for nearly all of the downturn in the crude goods index. Prices for basic industrial materials and for crude foodstuffs and feedstuffs fell slightly more than in the prior month. (See table B.)

The index for crude energy materials edged up 0.4 percent in July, after registering a 16.2-percent increase in June. Crude petroleum prices fell 7.2 percent, following a 13.8-percent jump in the previous month. The natural gas index rose 6.4 percent, after gaining 23.9 percent a month ago. By contrast, coal prices advanced 0.6 percent, following a 1.6-percent decline a month earlier.

The index for basic industrial materials decreased 1.8 percent in July, after posting a 1.3-percent drop in the prior month. Following a June decline of 1.4 percent, wastepaper prices fell 12.3 percent in July, the largest decline since a 13.3-percent drop in April 1996. The index for softwood logs, bolts, and timber also decreased more than in the previous month. Prices for gold and copper ores turned down, after rising in the previous month. The index for crude foodstuffs and feedstuffs declined 2.7 percent in July, following a 2.6-percent decrease a month earlier. Falling July prices for corn, soybeans, slaughter cattle,

slaughter broilers and fryers, and Irish potatoes for processing outweighed rising prices for fluid milk, slaughter hogs, and unprocessed finfish.

### Net output price indexes for mining, manufacturing, and services industries

**Mining.** The Producer Price Index for the Net Output of Total Domestic Mining Industries advanced 0.9 percent in July, after registering a 13.8-percent gain in June. (Net output price indexes are not seasonally adjusted.) Leading the deceleration among mining industries, the index for the crude petroleum, natural gas, and natural gas liquids industry increased 1.0 percent, following a 19.0-percent rise a month earlier. Prices received by the gold ores and copper ores industries declined, after advancing in the prior month. The index for the crushed and broken limestone industry increased less than it did a month ago. By contrast, prices received by the bituminous coal and lignite industry rose 0.5 percent, following a 1.2-percent drop in June. The indexes for the potash, soda, and borate minerals industry and for the oil and gas field exploration services industry also turned up, after falling in the previous month. Prices received by the oil and gas well drilling industry gained more than they did a month earlier. In July, the Producer Price Index for the Net Output of Total Domestic Mining Industries stood at 114.8 (December 1984=100), 45.9 percent above its year-ago level.

# Resampling of Industries

**E**ffective with the publication of data for July 2000, the Producer Price Index (PPI) includes data for 13 re-sampled industries. The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to more accurately reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals. For information on specific additions, deletions, and recodes of indexes that are effective this month, see tables 12 through 18 in this issue, or contact the Section of Index Analysis

and Public Information at (202) 691-7705.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, seven industries are being introduced into the PPI for the first time. These new indexes comprise the food stores and new car dealers portions of retail trade. Indexes for these industries appear in table 5 of the *PPI Detailed Report*. (Table 5 also includes data for SIC 5451, Dairy Products Stores in an aggregate index for SIC 54, Food Stores.) For further discussion of these new indexes, see "Retail trade industries in the PPI" in this issue, or call the Section of Index Analysis and Public Information at (202) 691-7705.

# Retail Trade Industries in the PPI

Price indexes for seven retail trade industries were introduced into the Producer Price Index (PPI) in July 2000, reflecting the ongoing BLS effort to expand PPI coverage of the U.S. economy into areas other than the mining and manufacturing sectors. These indexes appear in table 5 of the *PPI Detailed Report* and are available on-line via the BLS home page (<http://stats.bls.gov>). These industries include:

- SIC 5411 — Grocery Stores
- SIC 5421 — Meat and Fish (Seafood) Markets
- SIC 5431 — Fruit and Vegetable Markets
- SIC 5441 — Candy, Nut, and Confectionery Stores
- SIC 5461 — Retail Bakeries
- SIC 5499 — Miscellaneous Food Stores
- SIC 5511 — New Car Dealers

Establishments in the retail sector primarily are engaged in purchasing goods for resale to the consumer. Given that little, if any, transformation of these goods takes place, the PPI views a retailer as a supplier of services (rather than goods). This implies that the output of a retail trade establishment can be estimated by the difference between the retail selling price of a good and the acquisition price for that same item. (Any discounts from the vendor to the retailer and any discounts offered by the retailer to the consumer are captured.) The resulting gross margin prices reflect the value added by the establishment for services such as marketing, storing, displaying goods in convenient locations, and making the goods easily available for customers to purchase.

Margin weights provided to the PPI by the Bureau of the Census were used to weight retail trade at the 4-digit industry level. Item weights used in the PPI retail trade cells reflect margin weights for margin priced items and retail weights for retail priced items, in those rare cases when retail priced items are being measured. A baked good that is made on the premises is an example of an item that would not have a margin price.

The PPI classifies establishments in the mining and manufacturing sectors based on their major revenue-generating activity. However, retail trade establishments are grouped using their "usual trade designation." For example, many convenience stores sell groceries, prepared foods, and gasoline. Often, the major revenue-generating activity is selling gasoline. If the convenience store owner states that "convenience store" is the usual trade designation, the PPI treats the establishment as a convenience store rather than as a gasoline service station.

## SIC 54, Food Stores

A substantial part of the overall retail trade sector is made up of Food Stores, which are primarily engaged in selling food for home preparation and consumption. This group of seven industries is being introduced into the PPI in July 2000 with historical data back to January 2000. These industries include: SIC 5411, Grocery Stores; SIC 5421, Meat and Fish (Seafood) Markets; SIC 5431, Fruit and Vegetable Markets; SIC 5441, Candy, Nut, and Confectionery Stores; SIC 5461, Retail Bakeries; and SIC 5499, Miscellaneous Food Stores. An index aggregation for SIC 54 also will include data from SIC 5451, Dairy Products Stores.

The largest industry within Food Stores is SIC 5411, Grocery Stores. This industry is further broken down into Supermarkets and Convenience Food Stores. For the Supermarket portion of this industry, data are published according to department, and the proportions that were used to allocate the department weights were derived from gross margin dollars obtained from industry trade journals. The departments include:

- Meat
- Produce
- Bakery
- Dairy
- Frozen foods
- Edible grocery
- Nonedible grocery
- Health and beauty care
- General merchandise

The Supermarket aggregation also includes data from the deli department and other departments.

Convenience Food Stores also fall within SIC 5411, Grocery Stores. Data for this portion of the industry are assigned to 1 of 2 index categories, depending on whether the store sells gasoline:

- Convenience food (only) stores
- Convenience food/gasoline stores

A retail store provides the same service activity when slight modifications are made to the actual item being priced. However, if the store characteristics change, all the items being priced from that location have to be adjusted to account for the changes in the service provided that are related to a change in a store characteristic. Therefore, in addition to identifying

the product descriptions, prices, and terms of transaction for the items selected, BLS also collected store characteristics for:

- Total store area
- Selling area
- Checkout scanners
- Age of the scanner software
- Number of stock keeping units
- Number of full-time-equivalent employees
- Type and location of store
- Hours of operation
- Total sales volume
- Time since last renovation

Different methods of quality adjustment using the collected store characteristic data are being explored. For further information on these indexes, contact James Gorko at ([Gorko\\_J@BLS.gov](mailto:Gorko_J@BLS.gov)) or (202) 691-7855.

### **SIC 5511, New Car Dealers**

SIC 5511, New Car Dealers includes establishments that primarily sell new automobiles, light trucks, and vans. Commonly, these establishments also sell parts and accessories and used vehicles. Mechanical service and body repair services are both primary services in this industry. This industry is being introduced into the PPI in July 2000 with historical data back to January 2000. Price indexes are available for:

- New Car Dealers
- Vehicle Sales
- Service Labor and Parts

Below the 4-digit level, data are separated into an aggregate index for Vehicle Sales and an index for Service Labor and Parts. The Vehicle Sales aggregation includes the New Vehicle Sales index, and also data from used vehicle sales and retail parts sales. The used vehicle sales represent sales of used vehicles by new vehicle dealerships. The retail parts sales represents sales of retail parts by new car dealerships.

This industry is unusual in that the output of Vehicle Sales is measured by the average gross margin, while the output of Service Labor and Parts is measured by the final price to the consumer. Margin dollars are used to weight Vehicle Sales, while gross sales dollars are used to weight Service Labor and Parts.

In measuring new vehicle sales, the PPI captures the average gross profit accruing for a given model of vehicle sold by a manufacturer's car dealerships. This figure includes the payments for quantity incentive plans, floor plan reserve, and year-end carryover incentives. The New Vehicle Sales index also includes gross margins realized from lease sales and fleet sales.

On the other hand, the Service Labor and Parts index measures the price for vehicle repair paid by the customer or the manufacturer (for warranty service). Approximately half of the revenue from this industry comes from repair and maintenance of vehicles. Prices for repair services reflect the average warranty repair rate or the average customer repair rate. The repair rate is applied to the time needed to complete the repair. The final price includes the adjusted repair rate and the price of parts needed to complete the repair.

For further information on these indexes, contact Scott Paris at ([Paris\\_S@BLS.gov](mailto:Paris_S@BLS.gov)) or (202) 691-7892.

<sup>1</sup> Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1977 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

<sup>2</sup> The indexes for March 2000 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

These material inputs include only domestic material input and do not include any imported materials which may be used.

<sup>2</sup> The indexes for March 2000 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

## Brief Explanation of Producer Prices Indexes

The term Producer Price Index (PPI) refers to a family of indexes that measure the average change over time in the selling prices received by domestic producers of goods and services. The PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI); CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices may differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the transportation, utilities, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of producer price indexes: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

### Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances; and nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton

yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

### Commodity Indexes

The commodity classification structure of the Producer Price Index organizes products by similarity of end use or material composition, regardless of their industry of origin. Fifteen major commodity groupings (2-digit level) make up the all-commodities index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit).

Nearly all 8-digit commodities under the traditional com-

modity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes are identical to movements of their counterparts. Therefore, monthly percent changes for corresponding indexes will be virtually identical even though their respective index levels may differ.

### Industry Net-Output Price Indexes

Producer price indexes for the net output of industries and their products are grouped according to the Standard Industrial Classification (SIC). Industry price indexes are compatible with other economic time series organized by SIC codes, such as data on employment, wages, and productivity. Table 5 includes data for SIC industries and industry groups (2-, 3-, and 4-digit levels); indexes for Census product classes (5- and 6-digit levels), products (7-digit level), and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, e.g., resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Some product indexes published in table 5 correspond to 8-digit commodity indexes in table 6. In these cases, movements of the latter indexes are calculated on the basis of movements of their counterparts in table 5. Although most of these indexes continue to be published in table 6 on a base period of 1982=100 or some later base, corresponding indexes in table 5 are published on a base of the month of their introduction.

### Data Collection

Producer price indexes are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The Bureau of Labor Statistics (BLS) strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices are normally reported by mail questionnaire for the Tuesday of the week containing the 13th.

Price data are provided on a voluntary and confidential basis; no one but sworn BLS employees are allowed access to individual company price reports. The Bureau publishes price indexes instead of unit dollar prices. All producer price indexes are routinely subject to revision once, 4 months after original publication, to reflect the availability of late reports and corrections by respondents.

The BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI every January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced service industries includes the month in which an article describing the industry's content appeared in the *PPI Detailed Report*:

## Weights

Weights for most traditional commodity groupings of the PPI, as well as all indexes (such as stage-of-processing indexes) calculated from traditional commodity groupings, currently reflect 1992 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1992 through December 1995, PPI weights were derived from 1987 shipment values. Industry indexes shown in table 5 are also now calculated with 1992 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments in one industry to establishments classified in another industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes such as the all commodities index are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

## Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any changes to previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The new reference base is not used for indexes with a base later than December 1981, nor for indexes for the net output of industries and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. Reprints are available from the Bureau of Labor Statistics on request.

## Calculating Index Changes

Each index measures price changes from a reference period which equals 100.0 (1982 or some later month). An increase of 5.5 percent from the reference period in the finished goods price index, for example, is shown as 105.5. This change can

also be expressed in dollars as follows: "Prices received by domestic producers of a systematic sample of finished goods have risen from \$100 in 1982 to \$105.50 today." Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods today are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

### *Index point changes*

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

### *Index percent change*

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted, and unadjusted changes each month.

Seasonally adjusted data are preferred for analyzing general price trends in the economy, because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends.

Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In most cases, seasonal factors used in computing seasonally adjusted indexes have, in the past, been derived using the X-11-ARIMA Seasonal Adjustment Method. However, the PPI program upgraded to X-12 beginning in 1998. Each

year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior.<sup>1</sup> For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through the aggregative method, which combines movements of a wide variety of subproduct class (6-digit level) series.<sup>2</sup>

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

<sup>1</sup> Note that most broad commodity groupings and 8-digit individual commodities, as well as industry and census product indexes, are not seasonally adjusted and are, therefore, not included in this annual review.

<sup>2</sup> Tests previously conducted on the stage-of-processing indexes did not find significant residual seasonality.

## Producer Price Index Data Via the Internet

The Bureau of Labor Statistics has made producer price index series and news releases available via the Internet. BLS provides Internet access through a World Wide Web (WWW) homepage and a file transfer protocol (FTP) service.

### Retrieving PPI data from the BLS WWW site

Among other things, the BLS WWW site offers news releases and most PPI historical data. Enter the BLS homepage address <http://stats.bls.gov> using a WWW browser. After clicking the "Data" button on the homepage, the user can retrieve PPI data in any of six ways:

- **Most Requested Series** is a form-based application which allows the user to quickly obtain PPI time series data by selecting from a list of the most commonly requested time series, including "all commodities" and the stage-of-processing indexes (e.g., finished goods). Within each list, any one or all of the time series shown can be selected. The user can choose date ranges and output options prior to executing the query.

- **Selective Access** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides the user through the PPI classification system by listing index titles and does not require use of commodity or industry (SIC) codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. The user can choose date ranges and output options prior to executing the query.

- **News Releases** contains the most current press release produced by the PPI program. The release contains text explanations of aggregate index movement provided by PPI economists. It also contains preformatted data, including most aggregates and selected commodity indexes.

- **Series Report** is a form-based application that uses PPI time series identifiers (commodity or SIC codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

For PPI data, there are two basic formats to identify specific time series. For commodity codes and stage-of-processing codes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted). For industry product codes, enter a "pcu" prefix and a "#" between the fourth and fifth characters of the product code. *In both cases, no spaces are required.*

*Example:*

<b>Commodity code</b>	<b>Will provide data for:</b>
wpusop3000	Finished goods, not seasonally adjusted
wps063	Drugs and pharmaceuticals, seasonally adjusted
<b>Product code</b>	<b>Will provide data for:</b>
pcu28__#	Chemicals and allied products, not seasonally adjusted
pcu3711#111	Passenger cars, not seasonally adjusted

Note that the first product code uses two underscores as placeholders to complete the reference to a 2-digit product code time series.

• **FTP Site.** Given limitations on the amount of data users can extract from applications provided on the BLS WWW site, the FTP server is best suited for those requiring access to either a large volume of time series data or other PPI related documentation (e.g., seasonal factor and relative importance tables). For increased efficiency, it is suggested that users download files without opening, if their Internet browser permits. Enter *ftp://ftp.bls.gov* to access the FTP site.

Data and documentation available for download include:

The FTP site maintains files to help with searches and downloads. These files are centrally located in the */pub/doc* directory. Within this directory, go to the *overview.doc* file for an overview relating to all BLS data available through the FTP site. For *commodity-based PPI data* (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report), the program help file is *wp.doc*. For *industry-based PPI data* (which appear in tables 4, 5, 9, 10, and 11 of the monthly PPI report), the file is *pc.doc*. For industry-based time series that have been discontinued, go to *pd.doc*. (These and other help files are also maintained within each of the five directories listed above.)

• **Economy at a Glance** is a table that contains current data on various economic indicators produced by BLS. The user also can view these key time series graphically.
