*PPI Detailed Report* (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55 (\$77 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the supplement only is \$23 domestic (\$32.20 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgement card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402; telephone (202) 512-1800; or fax (202) 512-2168.

POSTMASTER: Send address changes to *PPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402-0001.

# Price Movements

## May 2004

The Producer Price Index for Finished Goods advanced 0.8 percent in May, seasonally adjusted. This increase followed a 0.7-percent rise in April and a 0.5-percent gain in March. At the earlier stages of processing, prices received by manufacturers of intermediate goods climbed 1.1 percent in May, after posting a 1.4-percent rise in the previous month. The crude goods index went up 2.8 percent, following a 3.0-percent jump in April. (See table A.)

Among finished goods in May, the index for finished consumer foods moved up 1.5 percent, compared with a 1.4-percent gain in the prior month. Prices for finished energy goods rose at a 1.6-percent rate for the second consecutive month. The index for finished goods other than foods and energy moved up at a slightly quicker pace in May than it did in April—rising 0.3 and 0.2 percent, respectively.

Before seasonal adjustment, the finished goods index increased 1.2 percent to 149.1 (1982=100). From May 2003 to May 2004, prices for finished goods rose 5.0 percent. This is the largest 12-month increase in the finished goods index since a 5.7-percent advance for the 12 months ended December 1990. For the 12 months ended May 2004, the indexes for finished energy goods, finished consumer foods, and finished goods other than foods and energy advanced 15.0, 7.4, and 1.7 percent, respectively. At the earlier stages of processing, prices for intermediate goods increased 7.1 percent for the 12

months ended May 2004, and the crude goods index surged 21.9 percent during the same period.

### Finished goods

The May index for finished consumer foods climbed 1.5 percent, after registering a 1.4-percent gain in April. Prices for dairy products, beef and veal, fresh fruits and melons, pork, processed young chickens, processed turkeys, and bakery products rose in May. By contrast, the indexes for soft drinks, fresh and dry vegetables, finfish and shellfish, and eggs for fresh use declined in May.

A 5.7-percent jump in gasoline prices led the 1.6-percent advance in the index for finished energy goods in May. Rising prices for liquefied petroleum gas, asphalt, residential natural gas, and finished lubricants also were registered in May. These increases were partially offset by falling prices for home heating oil and diesel fuel.

The index for finished consumer goods other than foods and energy moved up 0.4 percent, compared with a 0.3-percent gain in April. In May, rising prices for passenger cars, light motor trucks, pet food, sanitary papers and health products, pharmaceutical preparations, and household furniture more than offset declining prices for cigarettes, platinum

and karat gold jewelry, and lawn and garden equipment (except tractors).

The capital equipment index increased 0.3 percent in May, after showing no change in April. Prices for light motor trucks went up 1.1 percent, compared with a 1.0-percent decrease in the previous month. The indexes for passenger cars, communication and related equipment, commercial furniture, and pumps and compressors also turned up in May. Prices for welding machines and related equipment advanced at a quicker rate in May than they did in April. Conversely, the index for heavy motor trucks fell 2.0 percent in May, following a 0.3-percent decline in April. Prices for construction machinery and equipment turned down, while the index for truck trailers increased at a slower pace than it did in April.

### Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components rose 1.1 percent in May, after advancing 1.4 percent in the previous month. Prices for intermediate foods and feeds, components for manufacturing, durable and nondurable manufacturing materials, and materials and

components for construction increased less in May than they did in April. The index for intermediate energy goods advanced 1.8 percent for the second consecutive month. Prices for intermediate goods other than foods and energy moved up 0.9 percent, after posting a 1.1-percent gain in April. (See table B.)

The rate of increase for the intermediate foods and feeds index slowed from 5.0 percent in April to 3.0 percent in May. The index for prepared animal feeds rose 2.3 percent, following a 6.8-percent hike in the previous month. Prices also

advanced more slowly in May than in April for natural, processed, and imitation cheese; shortening and cooking oils; beef and veal; and confectionery materials. The index for liquid beverage bases (used for soft drinks) turned down, after rising in the prior month. Alternatively, prices for fluid milk products jumped 15.6 percent in May, following a 4.5-percent gain in April. The indexes for processed young chickens and pork also rose more in May than they did a month earlier.

Prices for components for manufacturing increased 0.3 percent, after rising 0.6 percent in April. The index for complex electronic component assemblies turned down 4.4 percent in May, compared with a 7.9-percent increase in the prior month. Prices for gray and ductile iron castings also turned down in May, after rising in April. Price increases slowed from April to May for the indexes for sheet metal products, aircraft engines and engine parts, truck and bus bodies (sold separately), and industrial controls. On the other hand, the motor vehicle parts index turned up 0.9 percent in May, following a slight decline in the previous month. Prices for digital MOS integrated circuits and transistors also rose, after falling in April. The index for computer storage devices showed no change in May, compared with a decline in the prior month.

The index for materials for durable manufacturing rose 2.0 percent in May, after advancing 2.4 percent in the prior month. Prices for hot rolled steel bars, plates, and structural shapes increased 2.5 percent, following a 9.6-percent surge in April. The indexes for cold rolled steel sheet and strip, copper cathode and refined copper, primary aluminum (except extrusion billet), and copper and brass mill shapes turned down in May, after rising a month earlier. By contrast, prices for aluminum mill shapes rose 3.7 percent, following a 1.2-percent gain in the previous month. The indexes for semifinished steel mill

products and cold finished steel bars also advanced at a faster pace in May than they did in April. Hardwood lumber prices turned up, after falling a month ago.

Subsequent to a 1.7-percent gain in April, the index for materials and components for construction moved up 1.5 percent in May. Prices for fabricated structural metal products increased 2.5 percent in May, following a 3.1-percent rise in the prior month. Prices also increased more slowly for millwork, wiring devices, steel mill products, and fabricated ferrous wire products. The index for nonferrous wire and cable turned down, after advancing in April. Conversely, prices for mineral wool for structural insulation turned up 3.4 percent in May, following a 0.8-percent decline in the prior month. The indexes for asphalt felts and coatings and hardwood lumber also turned up, after decreasing a month earlier. Heating equipment prices advanced, following no change in April. The index for air conditioning and refrigeration equipment rose more in May than it did in the previous month.

Prices for materials for nondurable manufacturing increased at nearly the same rate in May as they did in April—rising 1.0 and 1.1 percent, respectively. In May, rising prices for plastic resins and materials, paperboard, primary basic organic chemicals, paper, and woodpulp outweighed falling prices for fertilizer materials, alkalis and chlorine, and paint materials.

The intermediate energy goods index rose 1.8 percent in May, which is the same rate of increase as in April. In May, the impact of rising prices for jet fuels, gasoline, industrial natural gas, commercial natural gas, and liquefied petroleum gas surpassed the effect of declining prices for industrial electric power, diesel fuel, residual fuel, home heating oil, and kerosene.

### Crude goods

The Producer Price Index for Crude Materials for Further Processing gained 2.8 percent in May, after rising 3.0 percent in April. Prices for crude foodstuffs and feedstuffs increased less in May than they did in April, as did prices for crude energy materials. By contrast, the basic industrial materials index fell less in May than in the preceding month. (See table B.)

The crude foodstuffs and feedstuffs index advanced 3.2 percent, following a 3.7 percent rise in April. Fluid milk prices gained 12.1 percent in May, after soaring 23.2 percent in the prior month. The indexes for corn and slaughter broilers and fryers turned down, while the wheat index rose more slowly in May than it did in April. On the other hand, prices for slaughter hogs climbed 12.5 percent in May, after slipping 0.6 percent in April. The index for fresh fruits and melons also turned up. Prices for slaughter cattle and soybeans advanced at quicker pace than they did in April.

Subsequent to an April increase of 6.3 percent, the index for crude energy materials rose 5.8 percent in May. Natural gas prices moved up 6.4 percent in May, following a 7.9-percent rate of increase in the preceding month. Increases in

the coal index also slowed from April to May. Alternatively, crude petroleum prices rose at a quicker rate—posting a May gain of 6.7 percent after climbing 5.2 percent in April.

Prices for basic industrial materials fell 3.8 percent, following a 3.9-percent decline in the previous month. The decrease in May was led by a 15.7-percent drop in prices for iron and steel scrap. The indexes for aluminum base scrap, gold ores, copper base scrap, pulpwood, and copper ores also declined in May. On the other hand, price increases were registered for raw cotton; construction sand, gravel, and crushed stone; iron ore; wastepaper; and hides and skins.

### Net output price indexes for mining, manufacturing, and services industries

**Mining.** The Producer Price Index for the Net Output of Total Mining Industries increased 4.7 percent in May, following a 3.4-percent gain in the prior month. (Net output price indexes are not seasonally adjusted.) Prices received by the natural gas liquid extraction industry rose 6.1 percent, after moving up 2.4 percent in the previous month. The industry indexes for crude petroleum and natural gas extraction and for bituminous coal and lignite surface mining also advanced at a faster pace than they did in April. Prices received by the oil and gas operations support activities industry turned up, following a decline in the previous month. The industry index for iron ore mining went up, after showing no change in the preceding month. By contrast, prices received by the gold ore mining industry dropped 8.5 percent in May, compared with a 3.4-percent rise a month earlier. The industry indexes for bituminous coal underground mining and copper and nickel ore mining also turned down, following gains in April. Prices received by the oil and gas well drilling industry advanced less than they did in the preceding month. In May, the Producer Price Index for the Net Output of Total Mining Industries was 145.0 (December 1984=100), 14.8 percent above its year-ago level.

**Manufacturing.** The Producer Price Index for the Net Output of Total Manufacturing Industries advanced 1.1 percent in May—the same rate of increase as in April. In May, rising prices received by manufacturers of food, petroleum and coal products, furniture and related products, primary metal, electrical equipment and appliances, plastic and rubber products, and chemicals outweighed falling prices received by manufacturers of beverages and tobacco, computers and electronic products, printing and related support activities, and surgical appliances and supplies. In May, the Producer Price Index for the Net Output of Total Manufacturing Industries was 143.4 (December 1984=100), 5.6 percent above its year-ago level.

**Services.** Among services industries in May, rising prices were received by the industries for general medical and surgical hospitals, securities brokerage, direct property and

casualty insurance, casino hotels, television broadcasting, and used household and office goods moving. On the other hand, industry indexes for employee leasing services,

passenger car rental, cellular and other wireless carriers, architectural services, wired telecommunication carriers, and periodical publishers fell.

# Revision to Four PPI Commodity Indexes for January 2004

The March 18, 2004 release of Producer Price Index (PPI) data for January 2004 contained erroneous January index levels for four commodity index series: All commodities, farm products and processed foods and feeds, industrial commodities, and all commodities except farm products. These index series appear in table 3 of the PPI news release and in tables 6 and 8 of the *PPI Detailed Report*. They also are available on the BLS Web site.

The error in calculating January index levels was made in a step that is unique to these four series. The correct preliminary values for January 2004 are 141.0 for all commodities, 136.4 for farm products and processed foods and feeds, 141.9 for industrial commodities, and 142.6 for all commodities except farm products. The published index values for all series other than the four listed above, and for all months other than January 2004, were not affected.

The original January 2004 index values for the four affected

series were removed from the time series database and were not available in the January and February issues of the *PPI Detailed Report*. In addition, the originally released values for any percent changes involving January 2004 were incorrect for those four series. Those percent change values also were not available.

In accordance with the usual PPI policy, all PPI data are revised after 4 months. With the release of May 2004 data, final values for January 2004 are 141.4 for all commodities, 136.8 for farm products and processed foods and feeds, 142.2 for industrial commodities, and 142.9 for all commodities except farm products. In addition, percent change calculations are now published for periods beginning or ending in January 2004.

<sup>1</sup> Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available.

<sup>2</sup> The indexes for January 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

<sup>3</sup> Includes crude petroleum.

<sup>4</sup> Excludes crude petroleum.

<sup>5</sup> Percent of total finished goods.

<sup>6</sup> Percent of total intermediate materials.

<sup>7</sup> Formerly titled "Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco."

<sup>8</sup> Percent of total crude materials.

<sup>1</sup> Indexes in this table are derived from the net-output-weighted industry price indexes shown in table 5. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings shown in table 6.

<sup>2</sup> Data for January 2004 have been revised to reflect the availability of late reports and corrections by

respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

<sup>1</sup> Industry and product class indexes may include products not shown separately.

<sup>2</sup> The indexes for January 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

<sup>3</sup> Not available.

<sup>4</sup> Seasonal product—no price available this month.

<sup>5</sup> The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium. n.e.c. = Not elsewhere classified.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

<sup>1</sup> These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities Index.

<sup>2</sup> The indexes for January 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

NOTE: Table 8 commodity groupings include the following items:

All commodities except farm products: 02 through 15  
 All foods: 011, 017, and 02 less 0261, 0262, and 029  
 Processed foods: 02 less 0261, 0262, and 029  
 Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15  
 Selected textile mill products: 0327, 03370104, 034, 03810804, 03810811, 03810821, 03810822, 03820135, 03820303, 03830324, 03830325, and 1231

<sup>1</sup> Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1997 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

<sup>2</sup> The indexes for January 2004 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

# Technical Note

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

## Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

## Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8 digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

## Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5- and 6-digit codes); indexes for Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

### Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an

increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

## Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

### Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at [http://www.bls.gov/opub/hom/homch14\\_etc.htm](http://www.bls.gov/opub/hom/homch14_etc.htm). Reprints are available on request.

### Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change can also be expressed in dollars, as follows: Prices received by domestic producers of a sample

of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

#### *Index point change*

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

#### *Index percent change*

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, that produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

### Producer Price Index Data Via the Internet

In 1995, BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites has eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. (There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.)

PPI data can be obtained from the WWW address at <http://www.bls.gov/ppi>. Scrolling down the page to the "Get Detailed Statistics" header reveals the following five methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, nonJava-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

*Example:*

<i>Commodity code</i>	<i>Will provide data for:</i>
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpu063803	Pharmaceutical preparations, cardiovascular system
wpusop3000	Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix "pcu" followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the 6-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as place holders for higher-level industry group codes.

**Industry-product code,  
Current NAICS series**

pcu325 --- 325 ---

pcu336110336110

pcu621111621111411

**Will provide data for:**

Chemical manufacturing, not seasonally adjusted

Automobile and light duty motor vehicle manufacturing

Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a "pdu" prefix and "#" between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) In all cases, no spaces are permitted.

**Industry-product code,  
Discontinued SIC series**

pdu28\_ \_#

pdu331\_ #

pdu3711#111

**Will provide data for:**

Chemicals and allied products

Blast furnaces, steel works, and rolling and finishing mills

Passenger cars

• **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the "Get Detailed Statistics" page or the PPI homepage. Data and documentation available for download include:

**Directory:**

- NAICS Current Series </pub/time.series/pc>
- SIC Discontinued Series </pub/time.series/pd>
- Commodity Series </pub/time.series/wp>

- Special Requests </pub/special.requests/ppi>
- Latest News Release </pub/news.release/ppi.txt>

The FTP site maintains files to help with searches and downloads. These files are centrally located in the </pub/doc> directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (that appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (that appear in tables 4, 5, and 9 of the monthly PPI report and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files are also maintained within each of the five directories listed above.)

**Other Sources of PPI Data**

PPI data also can be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the "Get Detailed Statistics" link at the top of the homepage, a chart appears listing all available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data are also accessible from [this page](#), including: Economic news releases, series report, and economy at a glance.

**Additional Information**

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The "Tables Created by BLS" section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or [ppi-info@bls.gov](mailto:ppi-info@bls.gov). Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.
