PPI Detailed Report (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical note. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55 (\$77 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the supplement only is \$23 domestic (\$32.20 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgment card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402; telephone (202) 512-1800; or fax (202) 512-2168.

POSTMASTER: Send address changes to *PPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402-0001.

Price Movements January 2005

The Producer Price Index for Finished Goods advanced 0.3 percent in January, seasonally adjusted. This increase followed a 0.3-percent decline in December and a 0.7-percent rise in November. At the earlier stages of processing, prices received by manufacturers of intermediate goods moved up 0.4 percent in January, after inching down 0.1 percent in December. The crude goods index fell 2.0 percent, following a 3.0-percent drop in December. (See table A.)

Among finished goods in January, prices for finished goods other than foods and energy climbed 0.8 percent, compared with a 0.2-percent gain in December. The index for finished energy goods fell at a slower rate in January than it did in December. By contrast, prices for finished consumer foods turned down in January, after edging up in December.

Before seasonal adjustment, the Producer Price Index for Finished Goods advanced 0.7 percent in January to 151.5 (1982=100). From January 2004 to January 2005, prices for finished goods increased 4.2 percent. During the same period, the finished energy goods index jumped 9.8 percent, prices for finished goods other than foods and energy rose 2.7 percent, and the index for finished consumer foods went up 4.1 percent. At the earlier stages of processing, prices for intermediate goods moved up 8.7 percent during the 12

months ended January 2005, while the crude goods index gained 10.8 percent.

Finished goods

Prices for finished consumer goods other than foods and energy climbed 0.9 percent in January, after inching up 0.1 percent in December. The cigarettes index rose 3.4 percent in January, compared with a 0.1-percent increase a month earlier. Prices for light motor trucks and pharmaceutical preparations also went up faster than they did in December. The indexes for alcoholic beverages, passenger cars, and sporting and athletic goods turned up in January, following declines in the preceding month. Prices for women's, girls', and infants' apparel, as well as for household furniture, advanced after showing no change in the previous month. Alternatively, the index for cosmetics and other toilet preparations decreased 0.2 percent in January, following a 0.5-percent gain in December. Prices for platinum and karat gold jewelry also turned down, while the pet food index fell, after remaining unchanged in December. (See table 2.)

The finished energy goods index moved down 1.0 percent in January, following a 2.5-percent decline in December. In January, falling prices for gasoline, residential natural gas, and liquefied petroleum gas outweighed increasing prices for residential electric power and home heating oil.

The capital equipment index advanced 0.6 percent in January, after posting a 0.2-percent gain in the preceding month. Prices for communication and related equipment turned up 0.5 percent, following a 0.9-percent decrease in December. The indexes for passenger cars and truck trailers also increased, after falling a month earlier. Prices for heavy motor trucks, light motor trucks, and printed circuit board manufacturing machinery moved up more in January than they did in December. The index for construction machinery and equipment rose 0.9 percent, following no change in December, while prices for integrating and measuring instruments were unchanged in January, after declining in the prior month. By contrast, the index for electronic computers dropped 6.1 percent, compared with a 0.4-percent dip in December. Price increases slowed from December to January for railroad equipment, while the indexes for transformers and power regulators, x-ray and electromedical equipment, and metal cutting machine tools turned down.

Prices for finished consumer foods went down 0.2 percent in January, after edging up 0.1 percent in the previous month. The eggs for fresh use index fell 23.5 percent, following a 22.9-percent upsurge in December. Prices for fresh fruits and melons, soft drinks, and processed young chickens also moved down, after rising a month earlier. The indexes for beef and veal and for dairy products advanced less in January than they did in December. By contrast, price decreases

for fresh and dry vegetables slowed from 26.4 percent in December to 12.0 percent in January. The roasted coffee index jumped 10.8 percent, following no change in the prior month. Prices for confectionery end products and processed turkeys increased more in January than they did in December.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components increased 0.4 percent in January, after inching down 0.1 percent in the previous month. Prices for materials for durable manufacturing, materials and components for construction, materials for nondurable manufacturing, and intermediate foods and feeds rose in January, while the intermediate energy goods index declined. Excluding prices for foods and energy, the index for intermediate goods advanced 0.8 percent, following a 0.5-percent gain in December. (See table B.)

Prices for materials for durable manufacturing increased 1.8 percent in January, compared with a 1.1-percent rise in the preceding month. The aluminum mill shapes index advanced 4.0 percent, following a 2.1-percent gain in the previous month. The indexes for cold rolled steel sheet and strip, cement, and prepared paint also increased more than they did in December. Prices for adhesives and sealants and hardwood lumber turned up, after falling a month earlier. Alternatively, the hot rolled steel bars, plates, and structural shapes index declined 0.5 percent in January, after moving up 2.1 percent in the previous month. Prices for plywood, copper cathode and

refined copper, copper and brass mill shapes, and cold finished steel bars rose less than they did in December, while the semifinished steel mill products index decreased in January, after showing no change in the prior month. (See table 2.)

Subsequent to a 0.5-percent rise in December, prices for materials and components for construction went up 1.0 percent in January. The concrete products index advanced 2.2 percent in January, following a 0.6-percent gain in the preceding month. Prices for fabricated structural metal products, softwood lumber, heating equipment, and paving mixtures and blocks also increased more than they did in December, while the indexes for plastic construction products and treated wood turned up in January. By contrast, prices for asphalt felts and coatings turned down 3.5 percent in January, after posting a 1.5-percent gain in the previous month. The indexes for millwork and metal valves (except fluid power) also declined, following increases a month earlier. Prices for plywood, steel mill products, and nonferrous wire and cable rose less than they did in December.

The rate of increase in the index for materials for nondurable manufacturing slowed from 1.2 percent in December to 0.6 percent in January. Prices for plastic resins and materials rose 2.3 percent, after increasing 4.5 percent in December. The indexes for intermediate basic organic chemicals, paper, fertilizer materials, paint materials, and medicinal and botanical chemicals turned down in January. Alternatively, the fats and oils (inedible) index jumped 12.5 percent in January, following a 1.2-percent decline in the preceding month. Prices for gray fabrics, finished fabrics, and paperboard also turned up, after decreasing a month earlier. The index for primary basic organic chemicals fell less than it did in December, and prices for basic inorganic chemicals rose more in January than they did in the prior month.

The intermediate foods and feeds index advanced 0.9 percent in January, after increasing 0.8 percent in the previous month. In January, rising prices for prepared animal feeds, fluid milk products, beef and veal, dry milk products, refined sugar and byproducts, and liquid beverage bases (used for soft drinks) outweighed falling prices for natural, processed, and imitation cheese; shortening and cooking oils; processed young chickens; and liquid milk products.

The rate of decrease in the intermediate energy goods index slowed from 2.2 percent in December to 1.3 percent in January. Prices for jet fuels fell 1.9 percent in January, compared with a 21.9-percent drop in the preceding month. The indexes for gasoline and liquefied petroleum gas also fell less in January than they did in December. Prices for diesel fuel and home heating oil turned up in January, and the industrial electric power index increased at a quicker pace than it did a month earlier. By contrast, industrial natural gas prices moved down 4.5 percent in January, after posting a 1.9-percent gain in the prior month. The commercial natural gas index declined, following no change in December, and prices for natural gas to electric utilities fell more than they did in the preceding month.

Crude goods

The Producer Price Index for Crude Materials for Further Processing declined 2.0 percent in January, following a 3.0-percent fall in December. Prices for crude energy materials decreased less in January than they did in December. By contrast, the index for basic industrial materials fell at a faster pace in January than it did in the prior month, and the crude foodstuffs and feedstuffs index posted a smaller increase in January than it did in December. (See table B.)

The crude energy materials index decreased 4.5 percent in January, after declining 7.3 percent in December. Natural gas prices dropped 12.3 percent in January, while coal prices inched up 0.2 percent. By contrast, crude petroleum prices climbed 10.4 percent in January. (See table 2.)

Prices for basic industrial materials decreased 2.5 percent in January, after falling 1.3 percent in December. In January, declining prices for iron and steel scrap, gold ores, leaf tobacco, aluminum base scrap, and copper ores outweighed rising prices for construction sand, gravel, and crushed stone; iron ore; raw cotton; and softwood logs, bolts, and timber.

The crude foodstuffs and feedstuffs index gained 1.9 percent in January, following a 2.6-percent advance in December. A 6.5-percent increase in prices for slaughter cattle led the increase in the crude foodstuffs and feedstuffs index in January. Rising prices for slaughter broilers and fryers, corn, wheat, and raw cane sugar and byproducts also were registered in January. By contrast, the indexes for fluid milk, slaughter hogs, fresh and dry vegetables, fresh fruits and melons, and soybeans declined in January.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Mining Industries declined 3.6 percent in January, following a 5.8-percent drop in the prior month. (Net output price indexes are not seasonally adjusted.) Prices received by the natural gas liquid extraction industry fell 7.4 percent in January, compared with a 12.7-percent decline in December. The crude petroleum and natural gas extraction industry index also decreased less in January, while prices received by the industries for bituminous coal underground mining and for crushed and broken limestone mining and quarrying rose more than they did in the preceding month. Alternatively, the industry index for copper ore and nickel ore mining slipped 0.6 percent, compared with a 15.6-percent increase in December. Prices received by the industries for gold ore mining, bituminous coal and lignite surface mining, and potash, soda, and borate mineral mining also turned down, after rising a month earlier. The index for the oil and gas well drilling industry increased less than it did in December. In January, the Producer Price Index for the Net Output of Total Mining In-

dustries was 163.8 (December 1984=100), 13.3 percent above its year-ago level.

Manufacturing. The Producer Price Index for the Net Output of Total Manufacturing Industries increased 1.0 percent in January, following a 0.9-percent decrease in the previous month. Prices received by manufacturers of petroleum and coal products turned up 3.4 percent, after falling 13.0 percent in December. The industry group indexes for transportation equipment, beverages and tobacco, chemicals, machinery, fabricated metal products, nonmetallic mineral products, and primary metals rose more in January than they did in the preceding month. By contrast, prices received by food manufacturers increased 0.6 percent in January, following a 0.8-percent gain in December. The industry group indexes for wood product manufacturing and paper manufacturing also rose less than they did in the prior month. In January, the Producer Price Index for the Net Output of Total Manufacturing

Industries was 146.2 (December 1984=100), 5.3 percent above its year-ago level.

Services. Among services industries in January, prices received by commercial bankers advanced 4.9 percent, after edging down 0.2 percent in the preceding month. The industry indexes for offices of lawyers, hotels (except casino hotels) and motels, investment banking and securities dealing, and savings institutions also turned up, following declines in December. Prices for direct health and medical insurance carriers, offices of real estate agents and brokers, and general medical and surgical hospitals rose more quickly than they did in the previous month. By contrast, the industry index for scheduled freight air transportation declined 3.2 percent in January, following a 3.4-percent increase a month earlier. Prices received by the industries for passenger car rental, radio stations, cable networks, and residential property managers also turned down, after moving up in December.

Recalculation of Seasonal Adjustment Factors

Effective with this report, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2004 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2000 through December 2004. Revised seasonally adjusted data for this period, along with seasonal factors for commodity indexes to be used through December 2005, were released February 16, 2005. To

request this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information, at ppi-info@bls.gov or (202) 691-7705.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2004, based on former and recalculated seasonal factors. These percent changes include final price data through August 2004 and may differ from values shown in tables A and B of this report, which include final price data through September 2004.

Resampling of Industries

Effective with this report, the Producer Price Index (PPI) includes data for 58 resampled and 3 newly introduced industries classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this system-

atic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see tables 10 through 16 of this report, or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information, at ppi-info@bls.gov or (202) 691-7705.

New Producer Price Indexes for Commercial Banking—NAICS 522110—and Savings Institutions—NAICS 522120

In January 2005, in its ongoing effort to expand coverage of the service sector in the Producer Price Index (PPI), the Bureau of Labor Statistics (BLS) introduced new price indexes for Commercial Banking and Savings Institutions—NAICS 522110 and NAICS 522120. These indexes appear in table 5 of this publication and are available online through the BLS homepage: www.bls.gov. These indexes include data back to December 2003.

The primary output of these banking industries is the provision of financial services, including financial intermediation. For these industries, financial intermediation is defined as the assumption of risk that arises from taking money from depositors and lending it to borrowers.

The services for which indexes are available include:

- Loans
- Deposits
- Trust services
- Other banking services

To measure prices in these industries, PPI has implemented a user-cost methodology. The user cost for a financial service is the difference between the revenue it generates and the sum of its implicit and explicit costs. To measure these costs, interest is allocated between loans and deposits by means of a *reference rate*. The reference rate is the opportunity cost rate of money, where the risk premium has been eliminated to the greatest extent possible and intermediation services are excluded. For the PPI, the reference rate is the interest rate on risk-free assets held by banks.

In theory, the price of a loan is equal to the *asset-holding income rate* less a reference rate. The asset-holding income rate is the interest received plus service charges. For deposits, the price is equal to a reference rate less the *liability-*

holding cost rate. The liability-holding cost rate is the interest paid to depositors less service charges.

In practice, the price of loan and deposit services can be expressed as shown below. Both services are priced at the portfolio level.

$$\text{Loan price} = \left[\left(\frac{\text{earned interest income} + \text{fees}}{\text{average loan balance}} \right) - \text{reference rate} \right] * \$1,000$$

Earned interest income includes all interest actually received in a given month for the portfolio of loans being priced. This includes interest earned on both old and new loans. The average loan balance is calculated by averaging the ending daily balances of the loans in the portfolio over the month.

$$\text{Deposit price} = \left[\text{reference rate} - \left(\frac{\text{interest payments} - \text{earned fees}}{\text{average deposit balance}} \right) \right] * \$1,000$$

Interest payments include all interest actually paid to depositors on the funds held in the portfolio in a given month. Earned fees should include all fees, such as those for automatic teller machine withdrawals or insufficient funds, that are collected by the bank. Again, the deposit balance is calculated by taking the average of the ending daily balances of the portfolio.

For trust and all other banking services, the price is equal to the actual fee charged for performing the service. The fee can be a percentage of assets or a flat fee.

New Producer Price Index for the Construction, Mining, and Forestry Machinery and Equipment Rental and Leasing Industry—NAICS 532412

In January 2005, in its ongoing effort to expand service sector coverage in the Producer Price Index, the Bureau of Labor Statistics (BLS) introduced a new price index for NAICS 532412—Construction, Mining, and Forestry Machinery and Equipment Rental and Leasing. These data appear in table 5 of this publication and are available online through the BLS homepage: www.bls.gov. These indexes include data back to December 2003.

The indexes for this industry measure changes in revenue received by companies that rent and lease the aforementioned machinery and equipment. Each month, respondents provide price data for current rental contracts or short-term lease contracts to BLS using a standard price-update methodology that has been in place for 13 years, tracking prices received by the industries for passenger car rental (NAICS 532111) and truck, utility trailer, and RV rental and leasing (NAICS 532120). This price-update methodology uses actual transaction prices for contracts when that information is available, but when no transactions for a sampled contract have taken place, respondents estimate what the net transaction price would have been based on prices for similar transactions.

Leases longer than 2 years are measured by averaging the lease payments for a fixed-lease term. The cumulative lease payments (which are updated annually) capture the revenue

companies receive each month from long-term leases that were contracted in previous years, in addition to the current year. By capturing lease payments for all the years of the lease in the reported price, the index takes into account the continued flow of services that companies provide through these long-term leases. To ensure that the quality of service is held constant, respondents also are asked to report (or estimate) the cost of the leased equipment for each year. Using this methodology, interest rate fluctuations will be incorporated in the reported lease payments and shown as price changes.

The leasing portion of this industry is very small. Only establishments that provide operating and capital (that is, finance) leases without loanmaking are included in this industry. The 1997 Economic Census reported a minimal amount of finance leasing in NAICS 532412.

The service lines for which price indexes are available include the following:

- Construction equipment rental and leasing
- Oil field and well drilling equipment rental and leasing

¹ Industry and product class indexes may include products not shown separately.

² The indexes for September 2004 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

⁴ Seasonal product—no price available this month.

⁵ The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.

n e c. = Not elsewhere classified.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

¹ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1997 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

² The indexes for September 2004 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

Technical Note

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an

increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site at www.bls.gov/opub/hom/homch14_etc.htm. Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: Prices received by domestic producers of a sample

of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034×100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, that produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data Via the Internet

In 1995, BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites has eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. (There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.)

PPI data can be obtained from the WWW address at www.bls.gov/ppi. Scrolling down the page to the "Get Detailed Statistics" header reveals the following five methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

Example:

Commodity code	Will provide data for:
wps063	Drugs and pharmaceuticals, seasonally adjusted
wpu063803	Pharmaceutical preparations, cardiovascular system
wpusop3000	Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix "pcu" followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the 6-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as placeholders for higher-level industry group codes.

<i>Industry-product code, Current NAICS series</i>	<i>Will provide data for:</i>
pcu325 --- 325 ---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) In all cases, no spaces are permitted.

<i>Industry-product code, Discontinued SIC series</i>	<i>Will provide data for:</i>
pdu28_ _#	Chemicals and allied products
pdu331_ _#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

• **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

	<i>Directory:</i>
• NAICS Current Series	/pub/time.series/pc
• SIC Discontinued Series	/pub/time.series/pd
• Commodity Series	/pub/time.series/wp

- Special Requests </pub/special.requests/ppi>
- Latest News Release </pub/news.release/ppi.txt>

The FTP site maintains files to help with searches and downloads. These files are centrally located in the </pub/doc> directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (that appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report; tables 1, 2, 4, and 5 of the annual supplement; and tables 1, 2, 3, and 5 of the monthly news release), the program help file is **wp.txt**. For *current* industry-based PPI data based on the NAICS (that appear in tables 4, 5, and 9 of the monthly PPI report; tables 3, 6, 7, and 8 of the annual supplement; and table 4 of the monthly news release), the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files are also maintained within each of the five directories listed above.)

Other Sources of PPI Data

PPI data also can be accessed via the BLS homepage (www.bls.gov). After clicking the “Get Detailed Statistics” link at the top of the homepage, a chart appears listing all available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including: Economic news releases, series report, and economy at a glance.

Additional Information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or ppi-info@bls.gov. Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.
