PPI Detailed Report (ISSN 1099-2855; USPS 485-050) is a monthly report on producer price movements including text, tables, and technical note. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights.

To order this periodical for 1 year, cite *PPI Detailed Report* (WPPI) and send your check for \$55 (\$77 foreign) or provide your VISA or MasterCard number and expiration date to Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15220-7954. Cost of the supplement only is \$40 domestic (\$56 foreign).

Subscribers will receive the next available subscription issue after their order is received. An acknowledgment card is sent to all customers after their subscription order is processed to let them know that they will receive the next available issue.

Please wait at least 6 weeks before inquiring about your order. Then write to Subscription Service Section, U.S. Government Printing Office, Stop: SSOM, Washington, DC 20402; telephone (202) 512-1800; or fax (202) 512-2168.

POSTMASTER: Send address changes to *PPI Detailed Report*, U.S. Government Printing Office, Washington, DC 20402-0001.

Price Movements July 2006

The Producer Price Index for Finished Goods moved up 0.1 percent in July, seasonally adjusted. This increase followed a 0.5-percent advance in June and a 0.2-percent rise in May. Prices for finished goods other than foods and energy decreased 0.3 percent in July after moving up 0.2 percent in the previous month. At the earlier stages of processing, prices received by manufacturers of intermediate goods advanced 0.5 percent compared with a 0.7-percent gain in June. The index for crude materials climbed 3.1 percent after declining 1.7 percent in the prior month. (See table A.)

In July, a 1.3-percent increase in prices for finished energy goods slightly outweighed price declines of 0.3 percent for finished goods less foods and energy and for finished consumer foods.

Before seasonal adjustment, the Producer Price Index for Finished Goods rose 0.2 percent in July to 162.0 (1982 = 100). From July 2005 to July 2006, the finished goods index moved up 4.2 percent. Over the same period, prices for finished energy goods jumped 16.3 percent, the index for finished goods other than foods and energy increased 1.3 percent, and prices for finished consumer foods advanced 1.1 percent. For the 12-month period ended July 2006, the index for intermediate goods climbed 8.9 percent, and prices received by producers of crude goods advanced 6.6 percent.

Finished goods

The finished energy goods index increased 1.3 percent in July compared with a 0.7-percent rise in June. Prices for residential electric power advanced 1.8 percent following a 2.8-percent decline in the previous month. The indexes for residential natural gas and lubricating grease also turned up after declining in June. Prices

for liquefied petroleum gas rose more than they had a month earlier. By contrast, the gasoline index gained 0.7 percent after climbing 6.3 percent in June. Prices for home heating oil, diesel fuel, and kerosene turned down in July. (See table 2.)

The index for finished goods other than foods and energy declined 0.3 percent in July after edging up 0.2 percent a month earlier. Prices for light motor trucks decreased 3.1 percent compared with a 0.4-percent advance in June. The indexes for passenger cars, pharmaceutical preparations, civilian aircraft, mobile homes, newspaper circulation, railroad equipment, and integrating and measuring instruments also turned down in July. Prices for men's and boys' apparel fell after remaining unchanged in June, and the index for alcoholic beverages advanced less than it had a month earlier. By contrast, tire prices increased 3.5 percent following no

change in June. The indexes for women's, girls', and infants' apparel and for commercial furniture turned up in July, while prices for platinum and karat gold jewelry declined less than they had in the prior month.

The finished consumer foods index decreased 0.3 percent in July after rising 1.4 percent in June. The index for eggs for fresh use dropped 26.1 percent following a 27.7-percent climb a month earlier. Prices for fresh fruits and melons, finfish and shellfish, soft drinks, dairy products, processed fruits and vegetables, and beef and veal also turned down in July after increasing in the prior month. The indexes for processed young chickens, confectionery end products, and pork rose less than in June. Conversely, prices for fresh and dry vegetables advanced 6.5 percent in July following a 7.5-percent decline in June.

Intermediate goods

The index for Intermediate Materials, Supplies, and Components increased 0.5 percent in July after advancing 0.7 percent in June. Prices for materials for nondurable manufacturing and for intermediate foods and feeds rose less than they had in June, while the index for intermediate energy goods turned down in July. By contrast, prices for materials for durable manufacturing and for materials and components for construction increased more in July than they had in the preceding month. The index for intermediate goods less foods and energy moved up 0.7 percent after rising 0.8 percent in June. (See table B.)

The materials for nondurable manufacturing index edged up 0.2 percent in July following a 1.0-percent gain in the pre-

ceding month. Prices for primary basic organic chemicals increased 2.2 percent after advancing 5.4 percent in June. The indexes for plastic resins and materials, paperboard, and synthetic fibers also rose less in July than they had in the prior month. Prices for intermediate basic organic chemicals, paper, and nitrogenates turned down following increases a month earlier. Conversely, the index for finished fabrics moved up 0.6 percent in July after decreasing 0.2 percent in June. Prices for phosphates also advanced following declines in the previous month. (See table 2.)

Prices for intermediate energy goods inched down 0.1 percent in July after rising 0.4 percent in the prior month. Diesel fuel prices dropped 5.0 percent following a 5.4-percent advance in June. The indexes for jet fuel, residual fuel, and home heating oil also turned down in July. Prices for gasoline increased less than they had in June. By contrast, the industrial natural gas index moved up 2.9 percent in July after declining 7.3 percent in June. Prices also turned up in July for commercial natural gas and natural gas to electric utilities. The index for liquefied petroleum gas rose more than it had in June.

The rate of increase in the index for intermediate foods and feeds slowed from 1.0 percent in June to 0.4 percent in July. Prices for processed young chickens rose 1.9 percent following a 12.1-percent jump in June. The index for pork also advanced less in July than it had a month earlier. Prices for natural, processed, and imitation cheese and for beef and veal turned down after increasing in June. Alternatively, the index for fluid milk products moved up 1.1 percent in July following a 0.3-percent decline in the preceding month. Prices for flour and for refined sugar and byproducts advanced more than they had in June. The prepared animal feeds index increased after remaining unchanged in the previous month.

Prices for materials for durable manufacturing advanced 2.3 percent in July following a 1.1-percent gain in the prior month. The index for primary nonferrous metals jumped 11.4 percent after falling 3.5 percent in June. Prices for copper and brass mill shapes and for plywood also turned up in July. The indexes for softwood lumber and for building paper and board decreased less than they had in the previous month. By contrast, prices for aluminum mill shapes fell 2.3 percent after rising 2.4 percent in June. The index for secondary aluminum also turned down in July following a gain in the previous month. Prices for semifinished steel mill products, cold finished steel bars, and unprocessed filament yarns increased less than they had in June.

Prices for materials and components for construction increased 0.7 percent in July after rising 0.3 percent in June. The index for concrete products advanced 1.4 percent following a 0.2-percent gain in the prior month. Softwood lumber prices declined less in July than they had a month earlier. The indexes for plastic construction products, plumbing fixtures and brass fittings, and plywood turned up after falling in the preceding month. Alternatively, prices for wiring devices rose 0.2 percent in July following a 1.4-percent increase in June. The index for air-conditioning and refrigeration equipment also rose less than it had in the preceding month, and prices for nonferrous wire and cable fell more than in June.

Crude goods

The Producer Price Index for Crude Materials for Further Processing increased 3.1 percent in July following a 1.7-percent decrease in June. Leading this reversal were prices for crude energy materials, which rose after falling in the previous month. By contrast, the indexes for crude foodstuffs and feedstuffs and for crude non-

food materials less energy advanced less in July than they had in the preceding month. (See table B.)

The index for crude energy materials turned up 4.8 percent after decreasing 6.8 percent in June. Leading this upturn, the natural gas index rose 1.2 percent following a 10.8-percent drop in the prior month. Crude petroleum prices moved up 9.4 percent in July after a 3.7-percent decline a month earlier. The index for coal increased 0.6 percent following no change in the preceding month. (See table 2.)

Price increases for crude foodstuffs and feedstuffs slowed from 4.8 percent in June to 1.8 percent in July. The index for slaughter broilers and fryers advanced 6.4 percent following a 14.7-percent increase in the previous month. Prices for slaughter cattle also rose less in July than they had a month earlier, while the indexes for slaughter hogs, fluid milk, and fresh fruits and melons fell after increasing in June. Conversely, corn prices climbed 8.0 percent following a 1.2-percent decline in June. The indexes for wheat, fresh vegetables (except potatoes), and soybeans also rose in July after falling in the prior month.

The crude nonfood materials less energy index increased

1.3 percent following a 1.7-percent advance in the preceding month. In July, rising prices for wastepaper; construction sand, gravel, and crushed stone; gold ores; and miscellaneous metal ore mining outweighed falling prices for iron and steel scrap, copper base scrap, aluminum base scrap, and raw cotton.

Net output price indexes for mining, manufacturing, and services industries

Mining. The Producer Price Index for the Net Output of Total Mining Industries increased 5.0 percent in July after decreasing 4.4 percent in June. (Net output price indexes are not seasonally adjusted.) Leading this upturn, prices received by the industry for crude petroleum and natural gas extraction jumped 5.3 percent following a 6.5-percent drop in the previous month. Also advancing in July following declines a month earlier were the industry indexes for natural gas liquid extraction, gold ore mining, oil and gas well-drilling services, bituminous coal underground mining, and crushed and broken granite mining and quarrying. Alternatively, prices received by the industry for miscellaneous metal ore mining rose 3.9 percent after climbing 7.0 percent in June. The index for oil and gas operations support activities also moved up at a slower rate than it had in the preceding month. In July, the Producer Price Index for Total Mining Industries was 212.9 (December 1984 = 100), 10.1 percent above its year-ago level.

Manufacturing. The Producer Price Index for the Net Output of Total Manufacturing Industries inched up 0.1 percent in July after increasing 0.6 percent in June. Prices received by producers of petroleum and coal products edged up 0.1 percent following a 3.0-percent gain in the previous month. The industry group indexes for foods, paper, and machinery manufacturing also advanced less in July than they had in the previous month. Prices received by producers of transportation equipment moved down in July after registering no change in June. The indexes for beverage and tobacco manufacturing and for printing and related support activities turned down after climbing in the prior month. Conversely, prices received by the plastics and rubber products industry group rose 0.6 percent in July compared with a 0.6-percent decline in June. The industry group index for manufacturers of medical equipment and supplies also turned up after falling in the preceding month, while prices received by wood products manufacturers decreased less than they had in June. In July, the Producer Price Index for Total Manufacturing Industries was 159.7 (December 1984 = 100), 5.8 percent above its year-ago level.

Services. Among services industries, prices received by commercial bankers fell 3.6 percent in July following a 5.8-percent jump in June. The industry indexes for portfolio management, television broadcasting, software publishers, and lessors of nonresidential buildings (excluding miniware-

houses) also moved down in July after rising a month earlier. Prices received by the scheduled passenger air transportation industry and savings institutions increased at slower rates than they had in June. By contrast, the index for general medical and surgical hospitals climbed 0.8 percent in July af-

ter moving up 0.1 percent in the prior month. Prices received by the industries for investment banking and securities dealing and for specialty hospitals (except psychiatric and substance abuse) also advanced more in July than they had in the previous month.

Resampling of Industries

Effective with this report, the Producer Price Index (PPI) includes data for 65 resampled and 3 newly introduced industries classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this

systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see tables 10 through 16 of this report, or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Producer Price Index Introduced for the Nonresidential Building Construction Sector— NAICS 236222

With the release of data for July 2006, the Bureau of Labor Statistics (BLS) expanded the Producer Price Index (PPI) by introducing an index measuring the changes in output prices for new school construction. This index is classified under a PPI-specific 2002 North American Industry Classification System (NAICS) code, 236222. This index appears in table 5 of the *PPI Detailed Report* and is available online through the BLS Web site. This index includes data back to December 2005.

The index for NAICS 236222, new school construction, is the second measure developed and published by the PPI as part of its Nonresidential Building Construction (NRBC) initiative. This index was developed using a method similar to the one employed for new warehouse construction, NAICS 236221. That index, introduced with PPI data for July 2005, was the first measure produced as part of the NRBC initiative. For NAICS 236222, the method yields a national weighted-average estimate of output price changes for new K-12 school construction. The approach adopted by BLS is one that will be sustainable over time given the constraints imposed by factors such as the PPI's Laspeyres index framework and the fact that the PPI is a voluntary monthly survey completed by profit-maximizing firms.

BLS uses a method in which school building models are developed and specified to represent the schools being constructed in the marketplace. Multiple school models were

developed to accommodate variations in building design. The building models are described as a series of unique production elements or "assemblies" in BLS terminology. Each building assembly represents a building construction activity that can be fully defined as a unique portion of the total project. Each assembly is made up of unit-price components that define the specific type and quantity of materials, labor, and equipment necessary for the assembly's installation.

A professional cost-estimating firm developed the building models under BLS direction. To achieve an output price, BLS combines the detailed material and installation (labor and related equipment) cost data, which are updated quarterly by the cost-estimating firm, with margin (overhead and profit) data collected monthly by BLS directly from building construction contractors. BLS aggregates output price changes captured at the assembly level each month to represent the change in output price for the total structure. Therefore, the BLS output indexes attempt to measure changes in the input costs for these structures, along with the change in contractor markups.

For more information on the NRBC initiative and for more details on the method BLS is using to develop output price indexes for the nonresidential structures included in the initiative, please see www.bls.gov/ppi/ppinrbc.htm.

Producer Price Index Introduced for Amusement and Theme Parks—NAICS 713110

To expand coverage of the service sector in the Producer Price Index (PPI), the Bureau of Labor Statistics (BLS) introduced a new price index for amusement and theme parks—North American Industry Classification System (NAICS) 713110—in July 2006. Data for this index appear in table 5 of the *PPI Detailed Report* and are available online through the BLS Web site.

This industry is part of the subsector for amusement, gambling, and recreation industries—NAICS 713. In this subsector, businesses may operate facilities at which patrons primarily engage in sports, recreation, amusement, or gambling activities. Alternatively, businesses in this subsector may provide other amusement and recreation services, such as supplying and servicing amusement devices in places of business operated by others; operating sports teams, clubs, or leagues that play games for recreational purposes; and guiding tours without using transportation equipment.

NAICS 713110 includes establishments known as amusement and theme parks that are primarily engaged in operating a variety of attractions, such as mechanical rides, water rides, games, shows, theme exhibits, refreshment stands, and picnic grounds. These establishments may lease space to others on a concession basis.

The services for which indexes are available include the following:

- Admissions
- Food and beverage sales
- Merchandise sales, games, and other services

To measure changes in admission prices, companies report the current monthly average charge paid for access to the park for a specific type of admission. Admission types can include adult, child, and senior. For each admission type, the average prices are calculated separately for daily, weekly, and season passes. For example, the price for adult daily admissions is the average of the prices paid for all adult daily passes sold during the current month.

To measure changes in prices for food and beverage sales, merchandise sales, games, and other services, companies report current transaction prices or fees. Explicit quality adjustments will be performed for changes in these services, such as changes in beverage sizes. If food, beverage, and merchandise sales are provided by an entity that is leasing space in the park, these services are not primary to NAICS 713110, and the lease payments are included in the “other receipts” index for this industry.

Producer Price Index Introduced for Golf Courses and Country Clubs—NAICS 713910

To expand coverage of the service sector in the Producer Price Index (PPI), the Bureau of Labor Statistics (BLS) introduced a new price index for golf courses and country clubs—North American Industry Classification System (NAICS) 713910—in July 2006. Data for this index, which date back to December 2005, appear in table 5 of the *PPI Detailed Report* and are available online through the BLS Web site.

This industry is part of the subsector for amusement, gambling, and recreation industries—NAICS 713. In this subsector, businesses may operate facilities at which patrons primarily engage in sports, recreation, amusement, or gambling activities. Alternatively, businesses in this subsector may provide other amusement and recreation services, such as supplying and servicing amusement devices in places of business operated by others; operating sports teams, clubs, or leagues that play games for recreational purposes; and guiding tours without using transportation equipment.

NAICS 713910 includes (1) establishments primarily engaged in operating golf courses (except miniature) and (2) establishments known as country clubs that are primarily engaged in operating golf courses, along with dining facilities and other recreational facilities. NAICS 713910 establishments often provide food and beverages, equipment rental, and golf instruction.

Establishments can be classified as private, public, or municipal facilities. Private facilities are golf courses that restrict play to members and their guests. Private facilities can be either for profit or not for profit. Public facilities are golf courses that are open, at least on a limited basis, to the general public. They typically operate on a fee basis, although they sometimes offer memberships or annual passes. They are often referred to as daily-fee facilities. Municipal facilities are golf courses owned by a city or county. Golf courses are included in the PPI if the majority of their funding comes from

revenues collected from patrons. If golf courses are primarily funded by government resources, they are not included in the PPI. The operations of any of these courses—public, private, or municipal—may be contracted out to a golf course management company. The operation of driving ranges and resorts with golf facilities is classified in other industries. For example, a resort with golf facilities is classified in NAICS industry group 7211, traveler accommodations.

The services for which indexes are available include the following:

- Membership dues and fees
- Greens and guest fees
- Food and beverage sales
- Equipment rentals and all other golf services

To measure changes in prices for memberships, companies report the current annual or monthly fees paid for access to facilities or services during a specific contract term by a specific type of member. Membership types include adult, family, and corporate. Prices are reported separately for new memberships, which include initiation fees and membership dues, and renewal memberships, which include only membership dues.

To measure changes in prices for greens and guest fees, food and beverage sales, and equipment rentals, companies report current transaction prices or fees. Explicit quality adjustment will be performed for changes to these services, such as changes in beverage sizes. Companies may also report current average prices for greens and guest fees. If food, beverage, and merchandise sales are provided by an entity that is leasing space at the golf course or country club, these services are not primary to NAICS 713910, and the changes in lease payments are included in the “other receipts” index for this industry.

¹ Industry and product class indexes may include products not shown separately.

² The indexes for March 2006 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

⁴ Seasonal product—no price available this month.

⁵ The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium.

n.e.c. = Not elsewhere classified.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

¹ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 1997 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

² The indexes for March 2006 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

Technical Note

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

The illustration shows examples of how products are classified by stage of processing.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8-digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent 1 of 3 kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. The BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an

increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for it at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS Web site (www.bls.gov/opub/hom/homch14_itc.htm), and reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of

finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another usually are expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that generally are cited when escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from BLS.)

In 1998, the PPI program implemented the X-12 ARIMA Seasonal Adjustment Method; prior to that year, the program had employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These

updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI program has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 were subject to intervention in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data Via the Internet

In 1995, BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Scrolling down the page to the "Get Detailed Statistics" header reveals the following five methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

Example:

Commodity code

wps063

wpu063803

wpusop3000

Will provide data for:

Drugs and pharmaceuticals,
seasonally adjusted

Pharmaceutical preparations,
cardiovascular system

Finished goods, not seasonally
adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix “pcu” followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the 6-digit industry code is repeated, and up to 7 additional digits of product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code, Current NAICS series	Will provide data for:
pcu325 --- 325 ---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) *In all cases, no spaces are permitted.*

Industry-product code, discontinued SIC series	Will provide data for:
pdu28__#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

• **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

Directory:

- NAICS Current Series /[pub/time.series/pc](#)
- SIC Discontinued Series /[pub/time.series/pd](#)
- Commodity Series /[pub/time.series/wp](#)
- Special Requests /[pub/special.requests/ppi](#)
- Latest News Release /[pub/news.release/ppi.txt](#)

The FTP site maintains files to help with searches and downloads. These files are centrally located in the [/pub/doc](#) directory. Within this directory, go to the **overview.txt** file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data, which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report; tables 1, 2, 4, and 5 of the annual supplement; and tables 1, 2, 3, and 5 of the monthly news release, the program help file is **wp.txt**. For current industry-based PPI data based on the NAICS, which appear in tables 4, 5, and 9 of the monthly PPI report; tables 3, 6, 7, and 8 of the annual supplement; and table 4 of the monthly news release, the file is **pc.txt**. For industry-based SIC time series that have been *discontinued*, go to **pd.txt**. (These and other help files also are maintained within each of the five directories listed above.)

Other sources of PPI data

PPI data can also be accessed via the BLS homepage (www.bls.gov). After clicking the “Get Detailed Statistics” link at the top of the homepage, the user will see a chart listing all of the available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including *Economic News Releases*, *Series Report*, and *Economy at a Glance*.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or ppi-info@bls.gov. Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325. This service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.
