Producer Price Indexes -- January 2007

The Producer Price Index for Finished Goods declined 0.6 percent in January, seasonally adjusted. This decrease followed a 0.9-percent advance in December and a 1.8-percent jump in November. At the earlier stages of processing, prices for intermediate goods moved down 0.7 percent compared with a 0.5-percent increase in the prior month. The crude goods index decreased 6.3 percent after rising 2.8 percent in December. (See table A.)

Among finished goods, prices for energy goods fell 4.6 percent in January following a 2.2-percent rise in the prior month. The rate of increase in the finished consumer foods index slowed to 1.1 percent in January from 1.5 percent in December. By contrast, prices for finished goods other than foods and energy advanced 0.2 percent for the second consecutive month.

Before seasonal adjustment, the Producer Price Index for Finished Goods declined 0.2 percent in January to 160.2 (1982 = 100). From January 2006 to January 2007, prices for finished goods edged up 0.2 percent. Over the same period, the finished consumer foods index advanced 2.7 percent, and prices for finished goods other than foods and energy moved up 1.8 percent. Conversely, the index for finished energy goods fell 7.3 percent. For the 12 months ended January 2007, intermediate goods prices increased 0.9 percent, while the index for crude goods decreased 8.0 percent.

Finished goods

Finished energy goods prices declined 4.6 percent in January compared with a 2.2-percent advance in December. The gasoline index dropped 13.0 percent following a 5.0-percent increase in the previous month. Prices for liquefied petroleum gas, home heating oil, residential natural gas, and diesel fuel also turned down after rising in December. Alternatively, the residential electric power index increased 0.4 percent in January following a 0.3-percent rise a month earlier. (See table 2.)

The increase in the index for finished consumer foods slowed to 1.1 percent in January from 1.5 percent in the previous month. The index for processed young chickens rose 4.6 percent after climbing 9.1 percent in December. Prices for processed fruits and vegetables also rose less than they had in the prior month. The indexes for fresh fruits and melons and for fresh and dry vegetables turned down in January following advances a month earlier. By contrast, beef and veal prices moved up 3.3 percent in January after falling 2.4 percent in the preceding month. The indexes for pork and bakery products also turned up in January, while prices for dairy products rose more than they had in December.

The index for finished goods other than foods and energy increased 0.2 percent in January after moving up at the

same rate in December. In January, rising prices for pharmaceutical preparations; civilian aircraft; cigarettes; women's, girls', and infants' apparel; heavy motor trucks; household appliances; book publishing; and commercial furniture outweighed price declines for light motor trucks, electronic computers, and alcoholic beverages.

Intermediate goods

The Producer Price Index for Intermediate Materials, Supplies, and Components declined 0.7 percent in January following a 0.5-percent increase in December. The majority of this downturn is attributable to prices for intermediate energy goods, which fell in January after rising a month earlier. The index for materials for durable manufacturing decreased more than it had in December. Conversely, prices for materials for nondurable manufacturing declined less than they had a month earlier. The index for materials and components for construction turned up in January, and prices for intermediate foods and feeds increased more than they had in December. The index for intermediate goods other than foods and energy was unchanged for the second consecutive month. (See table B.)

Prices for intermediate energy goods declined 3.8 percent in January subsequent to a 2.5-percent advance in the prior month. The index for diesel fuel fell 13.2 percent following an 8.9-percent rise in December. Prices for gasoline, jet fuels, liquefied petroleum gas, commercial natural gas, and home heating oil also moved down in January

after increasing a month earlier. The index for natural gas to electric utilities decreased more than it had in December. Alternatively, prices for commercial electric power rose 0.4 percent in January compared with a 0.7-percent decline in the previous month. The industrial electric power index also turned up after a December decline. (See table 2.)

Prices for materials for durable manufacturing moved down 0.6 percent in January following a 0.2-percent decrease in December. The index for cold rolled steel sheet and strip fell 0.4 percent after advancing 3.6 percent in the prior month. Prices for hot rolled steel sheet and strip and for prepared paint also turned down in January. The index for copper and brass mill shapes declined more than it had in December. By contrast, prices for semifinished steel mill products edged up 0.2 percent compared with a 6.5-percent decrease in the previous month. The index for softwood lumber also turned up in January. Prices for hot rolled steel bars, plates, and structural shapes and for thermoplastic resins declined less than they had a month earlier, while the index for aluminum mill shapes rose more than it had in December.

Prices for materials for nondurable manufacturing inched down 0.1 percent in January following a 0.5-percent decrease in the prior month. The index for plastic resins and materials moved down 0.4 percent subsequent to a 2.7-percent drop a month earlier. Prices for finished fabrics also declined less than they had in December. The indexes for medicinal and botanical chemicals, synthetic rubber, and paint materials turned up in January after decreasing in the previous month. Woodpulp prices rose more than they had in the prior month.

By contrast, the industrial chemicals index decreased 1.1 percent after advancing 0.8 percent in December. Prices for inedible fats and oils and for paper also turned down in January.

The index for materials and components for construction edged up 0.2 percent in January following a 0.1-percent decline in the preceding month. Prices for softwood lumber turned up 5.7 percent after decreasing 0.5 percent in December. The indexes for asphalt felts and coatings and for concrete products advanced more than they had in the previous month. Prices for air conditioning and refrigeration equipment increased in January after no change a month earlier, while the index for gypsum products fell less than it had in December. Alternatively, prices for nonferrous wire and cable moved down 4.6 percent following a 2.6-percent decrease in the prior month. The index for plastic construction products also declined more than it had in December, and prices for mineral wool for structural insulation turned down in January.

The increase in the index for intermediate foods and feeds accelerated to 1.9 percent in January from 1.5 percent a month earlier. Prices for confectionery materials rose 12.5 percent compared with a 0.1-percent decline in December. Similarly, the indexes for beef and veal, pork, and for refined sugar and byproducts also turned up in January after falling a month earlier. Prices for fluid milk products advanced more than they had in the prior month. By contrast, the prepared animal feeds index moved up 1.2 percent in January following a 4.0-percent gain in the previous month. Prices for processed young chickens and for shortening and cooking oils also increased less than they had in December.

Crude goods

The Producer Price Index for Crude Materials for Further Processing declined 6.3 percent in January following a 2.8-percent advance in December. This downturn is attributable to prices for crude energy materials, which fell after rising in the previous month. Alternatively, the crude foodstuffs and feedstuffs index increased in January following no change in the preceding month, and prices for basic industrial materials rose more than they had a month earlier. (See table B.)

The crude energy materials index decreased 16.2 percent subsequent to a 5.6-percent advance in December. Prices for natural gas dropped 22.4 percent following a 6.8-percent increase in the prior month. Crude petroleum prices turned down 9.2 percent after rising 5.0 percent a month earlier. The index for coal declined 2.4 percent in January after edging up 0.4 percent in December. (See table 2.)

Prices for crude foodstuffs and feedstuffs increased 2.1 percent following no change in the preceding month. Slaughter cattle prices rose 3.5 percent after inching down 0.2 percent in December. The indexes for slaughter broilers and fryers and for slaughter turkeys also turned up in January after decreasing a month earlier. The indexes for fluid milk and unprocessed finfish advanced more than they had in the prior month. Alternatively, prices for fresh fruits and melons fell 13.4 percent following a 26.3-percent jump in December. The index for fresh vegetables (except potatoes) also turned down after increasing in the previous month. The indexes for corn

and wheat declined more in January than they had a month earlier.

The basic industrial materials index moved up 1.6 percent following a 0.5-percent gain in the previous month. Price increases for iron and steel scrap accelerated to 11.8 percent in January from 3.8 percent in December. The indexes for wastepaper; construction sand, gravel, and crushed stone; and phosphates also advanced more than they had a month earlier. Iron ore prices fell less in January than in the prior month. Alternatively, aluminum base scrap prices fell 4.6 percent following a 1.5-percent rise in the prior month. The indexes for gold ores and for softwood logs, bolts, and timber also turned down after increasing in December. Copper base scrap prices decreased more in January than they had a month earlier.

Net output price indexes

Mining, Utilities, and Manufacturing Industries. The Producer Price Index for the Net Output of Total Mining, Utilities, and Manufacturing Industries decreased 0.6 percent in January. (Net output price indexes are not seasonally adjusted.) Leading this decline, prices received by petroleum and coal products manufacturers fell 6.4 percent. The industry indexes for oil and gas extraction, electric power generation, natural gas distribution, and mining support activities also moved down in January. Conversely, prices received by food producers increased 1.1 percent. The industry group indexes for transportation equipment, chemicals, and machinery manufacturing, as well as prices for electric power distribution, also rose in January.

Trade Industries. The Producer Price Index for the Net Output of Total Trade Industries advanced 1.4 percent in January. (Trade indexes measure changes in margins received by wholesalers and retailers.) Most of this increase is attributable to a 44.2-percent jump in margins received by gasoline stations. The margin indexes for merchant wholesalers of durable goods, grocery stores, health and personal care stores, automobile dealers, and for book, periodical, and music stores also rose in January. By contrast, margins received by miscellaneous general merchandise stores decreased 9.5 percent. The margin indexes for electronics and appliance stores, merchant wholesalers of nondurable goods, electronic shopping and mail order houses, and department stores also declined in January.

Transportation and Warehousing Industries. The Producer Price Index for the Net Output of Transportation and Warehousing Industries increased 2.3 percent in January. Leading this advance, prices received by the scheduled passenger air transportation industry rose 12.2 percent. The industry indexes for couriers, long-distance general freight trucking (by the truckload), local specialized freight trucking of new goods, used household and office goods moving, and local general freight trucking also moved up in January. Conversely, prices received by providers of inland water freight transportation services fell 5.0 percent. The industry indexes for pipeline transportation of crude oil, long distance general freight trucking (less than truckload), and airport space leasing for concessions also declined in January.

Traditional Services Industries. The Producer Price Index for the Net Output of Total Traditional Services Industries advanced 0.6 percent in January. Higher prices received by offices of lawyers, the commercial banking industry, general medical and surgical hospitals, offices of physicians

(excluding mental health), portfolio managers, and by direct health and medical insurance carriers outweighed lower prices received by non-casino hotels and motels, wired telecommunications carriers, and the passenger car rental industry.

Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2006 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 2002 through December 2006. Revised seasonally adjusted data for this period, as well as seasonal adjustment factors for commodity indexes to be used through December 2007, were released February 14, 2007. To obtain this information, contact the Division of Industrial Prices and Price Indexes,

Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705, or visit the Producer Price Index homepage at www.bls.gov/ppi.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2006, based on former and recalculated seasonal factors. These percent changes include final price data through August 2006 and may differ from values shown in tables A and B of this release, which include final price data through September 2006.

PPI Weights Updated

The Bureau of Labor Statistics has updated the value weights used to calculate Producer Price Indexes to more accurately reflect recent production and marketing patterns. The new weights, which were introduced in February 2007 with the release of January 2007 index data, are based on shipment values from the year 2002. These value weights come from the Census of Manufactures, the Census of Mining, the Census of Services, and the Census of Agriculture. PPI weights had been based on 1997 census shipment values since January 2002.

All indexes were affected by this weight update, including all industry net output indexes, as well as indexes calculated for traditional commodity groupings. In addition, weights were updated from the 1997 to the 2002 census for all stage-of-processing indexes, durability of product indexes, and special commodity-grouping indexes. This weight revision does not change the arithmetic reference base, in most cases

1982 = 100, of the PPI index system.

The PPI classification system and aggregation structure did not change due to these weight revisions. The weight update, however, did result in significant shifts in the relative importance of some industries and products, and these shifts will impact future aggregate indexes in a manner commensurate with the relative gains and losses in value weights from 1997 to 2002.

Relative importance figures as of December 2006, based on the 1997 and 2002 weighting schemes, were made available on February 14, 2007, two business days prior to the release of January 2007 PPI data. To obtain this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at *ppi-info@bls.gov* or (202) 691-7705, or visit the Producer Price Index homepage at www.bls.gov/ppi.

New Aggregate Net Output Indexes Available

Effective with this release, a new set of industry-based net output aggregate indexes are available. As with all net output aggregate indexes, component indexes are assigned weights which exclude shipments to other industries within the same aggregation. The new indexes, which appear in Table 4 of the PPI News Release and the *PPI Detailed Report*, are as follows:

- Total mining, utilities, and manufacturing industries
- Total trade industries
- Total wholesale trade industries
- Total retail trade industries
- Transportation and warehousing industries

- Transportation industries
- Delivery and warehouse industries
- Total traditional service industries
- Selected healthcare industries
- Information
- Other selected traditional service industries

To obtain information about these indexes, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705, or visit the Producer Price Index homepage at www.bls.gov/ppi.

Introduction of Industries

Effective with this release, the Producer Price Index (PPI) includes data for 3 newly introduced industries classified according to the North American Industry Classification System (NAICS). For further discussion of these newly introduced PPIs, or for information regarding specific index

additions, deletions, and recodes that are effective with the January 2007 data release, see the January 2007 issue of the *PPI Detailed Report*, visit www.bls.gov/ppi, or contact the PPI's Section of Index Analysis and Public Information at ppi-info@bls.gov or (202) 691-7705.

Producer Price Index Introduced for the Nonresidential Building Construction Sector—NAICS 236223

With the release of data for January 2007, the Bureau of Labor Statistics (BLS) expanded the Producer Price Index (PPI) by introducing an index measuring the changes in output prices for new office building construction. This index is classified under a PPI-specific 2002 North American Industry Classification System (NAICS) code, 236223. This index appears in table 5 of the *PPI Detailed Report* and is available online through the BLS website. This index series includes data back to June 2006.

The index for NAICS 236223, New Office Building Construction, is the third measure developed and published by PPI as part of its Nonresidential Building Construction (NRBC) initiative. In July 2005 PPI introduced an index for NAICS 236221, New Warehouse Building Construction, and in July 2006 an index for NAICS 236222, New School Building Construction, was introduced. Indexes created under the NRBC initiative yield a national weighted-average estimate of output price changes. The approach adopted by BLS is one that will be sustainable over time given the constraints imposed by factors such as the PPI's Laspeyres index framework and the fact that the PPI is a voluntary monthly survey completed by profit-maximizing firms.

BLS uses a method in which office building models are developed and specified to represent the offices being constructed in the marketplace. Multiple office models were developed to accommodate variations in building design. The

building models are described as a series of unique production elements or "assemblies" in BLS terminology. Each building assembly represents a building construction activity that can be fully defined as a unique portion of the total project. Each assembly is made up of unit-price components that define the specific type and quantity of materials, labor, and equipment necessary for the assembly's installation.

A professional cost-estimating firm developed the building models under BLS direction. To achieve an output price, BLS combines the detailed material and installation (labor and related equipment) cost data, which are updated quarterly by the cost-estimating firm, with margin (overhead and profit) data collected monthly by BLS directly from building construction contractors. BLS aggregates output price changes captured at the assembly level each month to represent the changes in output prices for the total structure. Therefore, the BLS output indexes attempt to measure changes in the input costs for these structures, along with changes in contractor markups.

For more information on the NRBC initiative and for more details on the methodology BLS is using to develop output price indexes for the nonresidential structures included in the initiative, please go to www.bls.gov/ppi/ppinrbc.htm.

New Producer Price Indexes for Management Consulting Services—NAICS 541610

As part of its ongoing effort to expand service sector coverage in the Producer Price Index (PPI), the Bureau of Labor Statistics (BLS) introduced new price indexes for Management Consulting Services—North American Industry Classification System (NAICS) 541610—in January 2007. Data for this index, which date back to June 2006, appear in table 5 of the *PPI Detailed Report* and are available online through the BLS website.

While virtually all other PPI industry indexes are published at the 6-digit NAICS code level, the PPI for Management Consulting Services corresponds to the 5-digit NAICS code 54161. In order to be consistent with PPI systems, code 54161 has been re-coded in BLS publications and databases with the PPI-constructed code 541610. The five 6-digit NAICS industries that comprise 54161 are included as product line detail under code 54160. These lines include:

- **Administrative Management and General Management Consulting Services**

The provision of operating advice and assistance to businesses and other organizations on administrative management issues, such as financial planning and budgeting, equity and asset management, records management, office planning, strategic and organizational planning, site selection, new business startup, and business process improvement.

- **Human Resources and Executive Search Consulting Services**

The provision of advice and assistance to businesses and other organizations in one or more of the following areas: (1) human resource and personnel policies, practices, and procedures; (2) employee benefits planning, communication and administration; (3) compensation systems planning; (4) wage and salary administration; and (5) executive search and recruitment.

- **Marketing Consulting Services**

The provision of operating advice and assistance to businesses and other

organizations on marketing issues, such as developing marketing objectives and policies, sales forecasting, new product development and pricing, licensing and franchise planning, and marketing planning and strategy.

- **Process, Physical Distribution, and Logistics Consulting Services**

The provision of operating advice and assistance to businesses and other organizations in areas such as: (1) manufacturing operations improvement; (2) productivity improvement; (3) production planning and control; (4) quality assurance and quality control; (5) inventory management; (6) distribution networks; (7) warehouse use, operations, and utilization; (8) transportation and shipment of goods and materials; and (9) materials management and handling.

- **Other Management Consulting Services**

The provision of all management consulting services not mentioned in the other categories. Telecommunications and utilities management consulting services are included in this service area.

Most consulting transactions are measured and tracked in the PPI with model prices. For each responding firm, a group of specific contracts are selected during the initiation period. These contracts specify the detailed services provided and establish benchmarks for weighting the rates of the different types of consultants that work on the projects. Respondents provide the rates for each of the professionals who bill for their time on each of these projects. A total charge is calculated by multiplying the hours that consultants work on the selected project by their rates.

Whenever possible, this total price is then adjusted by the firm's *realization rate* for the specific project. The realization rate is calculated by comparing the total amount of revenue actually received for the project to the amount that would have been received for the

project if all consultants had billed for all of their time at non-discounted rates. This is done because firms frequently provide discounts of varying amounts to different clients. The respondent estimates the realization rate they would earn if they were to work on the same contract that was selected in the initiation period during the current month.

In subsequent months, for each specific service selected, the respondent updates the hourly rate for each professional, the realization rate, and the estimated cost of all billed travel and business expenses. Since the services provided in the model are held constant over time, the number of hours worked by each professional will remain unchanged, unless the number of hours required to provide the service changes. If the number of hours required to provide the service changes, the number of hours in the model will be updated and the resulting change is shown as a price change.

In some instances, a contingency or success fee may be charged in addition to the project hourly rates. Contracts that include these fees call for a payment to be made if a project is determined to have achieved a pre-established

benchmark (for example, achieving a certain level of cost savings). In these cases, respondents are asked to approximate the dollar value of the contingency fees that they would earn if they were to achieve the stated benchmark on the given contract during each pricing period.

The exception to this model of pricing for management consulting services is in the executive search segment of Human Resources and Executive Search Consulting Services. Virtually all executive search consulting transactions are priced as a percentage of the total first year compensation of the placed executive. This percentage fee is frequently called a retainer. The collected price for these transactions is established based on actual contracts selected during the initiation period. In subsequent months, respondents are asked to estimate the value of the total compensation that the placed executives would earn if they were to be hired for similar roles by similar companies during the current month, and the percentage fee that the firm would charge for conducting the service. The price is calculated by multiplying these two figures together.

Producer Price Index Introduced for Blood and Organ Banks—NAICS 621991

To expand coverage of the service sector in the Producer Price Index (PPI), the Bureau of Labor Statistics (BLS) introduced new price indexes for Blood and Organ Banks—North American Industry Classification System (NAICS) 621991—in January 2007. Data for these indexes, which date back to June 2006, appear in table 5 of the *PPI Detailed Report* and are available online through the BLS website.

This industry is part of NAICS sector 62, Health Care and Social Assistance, and further classified in the subsector for Ambulatory Health Care Services, NAICS 621. Industries in this subsector provide health services directly or indirectly to ambulatory patients and usually do not provide inpatient services. Health practitioners in this subsector provide outpatient services, with the facilities and equipment usually not being the more significant part of the production process.

NAICS 621991 includes establishments primarily engaged in collecting, storing, and distributing blood and blood products and storing and distributing body organs. The types of establishments covered in this industry include:

- Blood banks
- Organ banks (also called Organ Procurement Organizations—OPOs)
- Tissue banks, including eye and sperm banks

Non-profit organizations are responsible for most of the revenue earned by blood banks. Independent blood banks and donations at hospitals make up the rest of the industry.

OPOs are non-profit and operate in service areas designated by the federal government. Service areas may include an entire state, several states, or only part of a state. There are 58 OPOs in the United States.

The services within NAICS 621991 for which indexes are available include:

- human red blood and whole blood services
- human blood plasma services
- human blood platelet and other blood services
- human organ, bone, tissue and other bank services

To measure changes in prices for human blood services, BLS asks companies to report the monthly price received per unit of human red blood and whole blood, human blood plasma, human blood platelet, and other blood services. Other blood services include the provision of white blood cells, the price of which is also measured per unit. The most important price-determining characteristic in the blood bank industry is the type of blood product provided. Included in the fees charged to hospitals are processing charges for the collection, testing, labeling, storing, and shipping of blood.

Blood products requiring more extensive testing or processing are more costly, resulting in higher prices.

Blood services begin at the donation site where blood is drawn or *apheresis* is used. Apheresis (or *pheresis* or *hemapheresis*) is a procedure in which blood is drawn from a donor and separated into components, some of which are retained, such as plasma, and the remainder is returned by transfusion to the donor. Extra blood is collected for testing at this point. Blood is tested for ABO group (blood type) and Rh factor (positive or negative). The Food and Drug Administration mandates certain screening tests for blood—including tests for Hepatitis B surface antigen (HBsAg), Hepatitis B core antibody (anti-HBc), Hepatitis C Virus (HCV) antibody (anti-HCV), Human Immunodeficiency Virus (HIV) types 1 and 2 (anti-HIV-1 and anti-HIV-2), Human T-Lymphotropic Virus (HTLV) types I and II (anti-HTLV-I and anti-HTLV-II), serologic test for syphilis, Nucleic Acid Amplification Testing (NAT) for HIV-1 and HCV, and NAT for West Nile Virus.

To measure changes in prices for human organs, BLS asks OPOs to report transaction prices per organ. The most important price-determining characteristic is the type of organ provided. The recovery of organs is a surgical procedure done in an operating room. The recovered organs are then transported to the various hospitals or transplant centers where the recipients are waiting. Organs may be transported by OPOs or tissue banks, or may be shipped by courier. OPO services are usually purchased by health care providers such as transplant centers, hospitals, and physicians, or by individuals.

To measure changes in prices for tissues, BLS asks tissue banks to report transaction prices per tissue. For tissue banks, the quantity and the form of the tissue provided is price determining. The recovery of tissues may be a surgical procedure done in an operating room or minor medical procedure performed at designated medical facilities. The recovered tissues are then transported to the various hospitals or transplant centers where the recipients are waiting. Tissue bank services are usually purchased by health care providers such as hospitals, physicians, dentists, or by individuals.

Blood banks, Organ Procurement Organizations (OPOs), and tissue banks may alter the services they provide at any time. These changes take the form of either additional tests or changes in processes. As these tests become available they may be mandated by trade associations or the government through the Food and Drug Administration (FDA). When mandated by trade associations, member banks would be required to perform the new test or lose membership in the association. When a new test or process is mandated by the FDA, all banks are required to perform the new measure.

For quality adjustment purposes in the PPI, tests and processes will be handled in different ways. Tests provide more information about the blood, organ, or tissue. For example, a new test could be initiated that is a more comprehensive test for HIV. Processes refer to physical

changes in a blood, organ, or tissue product (for example, leukoreduced blood is whole blood that has had the white blood cells (leukocytes) reduced to minimize transfusion reactions).

Price changes due to the addition or subtraction of tests—when more or less information is provided about the blood, organ, or tissue product—will not be quality adjusted in the PPI because this does not constitute a change in the purchased product. Any product not passing screening tests is

destroyed and it is never purchased.

Price changes due to changes in processes—that is, a physical change in a blood, organ, or tissue product—will be quality adjusted by the PPI. New blood products created due to a change in processing will usually be distinguished by the development of a new HCPCS code. When a new process has sufficiently penetrated the market, the PPI will gather cost data from reporting blood banks so that the quality adjustment can be completed.

¹ Industry and product class indexes may include products not shown separately.

² The indexes for September 2006 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

³ Not available.

⁴ Seasonal product—no price available this month.

⁵ The special index for 924126, in which prices reflect premiums only, contrasts with the index shown elsewhere in this table for NAICS 524126, where prices reflect premiums plus the amount of investment income earned on the invested portion of the premium. n.e.c. = Not elsewhere classified.

Note: NAICS 2002 replaced the SIC system beginning with the release of PPI data for January 2004. See <http://www.bls.gov/ppi/ppinaics.htm> for details.

¹ Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 2002 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor or capital costs, these indexes should not be regarded as

comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of *Producer Price Indexes*.

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (two-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (six-digit codes), and individual items (eight-digit codes). Nearly all eight-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly

encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result,

broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the [BLS Web site at www.bls.gov/opub/hom/homch14_itc.htm](http://www.bls.gov/opub/hom/homch14_itc.htm). Reprints are available on request.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, on the Web at www.bls.gov/ppi/ppiescalation.htm. Reprints are available on request.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide

variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 were subject to intervention in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2003.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (www.bls.gov/ppi). Scrolling down the page to the "Get Detailed PPI Statistics" header reveals the following methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can

modify the date range and output options after executing the query, using the reformat button above the data output table.

- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. The application guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations,ethical (prescription), not seasonally adjusted
wdusil38011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice
pcu325412325412A	Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix “hdu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, discontinued NAICS series</u>	<u>Provides data for</u>
ndu212231212231	Lead ore and zinc ore mining
ndu2122312122312	Lead and zinc concentrates
ndu212231212231214	Lead concentrates

- **Flat Files** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include the following:

	<u>Directory:</u>
NAICS series, current	/pub/time.series/pc
NAICS series, discontinued	/pub/time.series/nd
SIC series, discontinued	/pub/time.series/pd
Commodity series, current	/pub/time.series/wp
Commodity series, discontinued	/pub/time.series/wd
Special requests	/pub/special.requests/ppi
Latest news release	/pub/news.release/ppi.txt

The FTP site maintains files to help with searches and downloads. These files are centrally located in the [/pub/doc](#) directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data,

the program help file is **wp.txt**; for discontinued commodity series, **wd.txt**; for current industry-based PPI data based on NAICS, **pc.txt**; for industry-based SIC time series that have been discontinued, **pd.txt**; and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled **/pub/time.series/compressed/tape.format/** on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (www.bls.gov). Clicking on the “Get Detailed Statistics” link at the top of the homepage calls up a chart listing all available BLS programs. The following methods are available for retrieving PPI data: Most requested statistics, create

customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data also are accessible from this page, including economic news releases, series report, and economy at a glance.

Additional information

The PPI homepage (www.bls.gov/ppi) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or ppi-info@bls.gov.
