Producer Price Indexes – July 2013

The Producer Price Index for finished goods was unchanged in July, seasonally adjusted. Prices for finished goods moved up 0.8 percent in June and 0.5 percent in May. At the earlier stages of processing, prices received by manufacturers of intermediate goods also were unchanged in July, and the crude goods index rose 1.2 percent. On an unadjusted basis, prices for finished goods advanced 2.1 percent for the 12 months ended July 2013. (See table A.)

Stage-of-Processing Analysis

Finished goods

The index for finished goods was unchanged in July as a 0.1-percent rise in prices for finished goods less foods and energy was offset by a 0.2-percent decrease in the index for finished energy goods. Prices for finished consumer foods were unchanged.

Finished core: The index for finished goods less foods and energy edged up 0.1 percent in July, the ninth consecutive increase. The July advance was led by prices for pharmaceutical preparations, which rose 1.0 percent. Increases in the indexes for light motor trucks and for communication and related equipment also contributed to higher finished core prices. (See table 2.)

Finished energy: Prices for finished energy goods moved down 0.2 percent in July after climbing 2.9 percent a month earlier. This decline is mostly attributable to a 3.9-percent decrease in the index for residential natural gas. Lower prices for gasoline and finished lubricants also were factors in the decline in the index for finished energy goods.

Finished foods: Prices for finished consumer foods were unchanged in July following a 0.2-percent advance in June. In July, a 5.6-percent increase in the index for pork offset a 10.6-percent decline in prices for fresh vegetables, except potatoes.

Intermediate goods

The Producer Price Index for intermediate materials, supplies, and components was unchanged in July after rising 0.5 percent in June. In July, a 1.2-percent advance in prices for intermediate foods and feeds and a 0.3-percent increase in the index for intermediate energy goods offset a 0.3-percent decline in prices for intermediate materials less foods and energy. (See table B.)

Intermediate foods: Prices for intermediate foods and feeds rose 1.2 percent in July, the largest increase since a 2.5-percent jump in August 2012. The July advance is mostly attributable to a 4.9-percent rise in the index for prepared animal feeds. Higher prices for pork and for shortening and cooking oils also contributed to the increase in the intermediate foods and feeds index. (See table 2.)

Intermediate energy: The index for intermediate energy goods moved up 0.3 percent in July, the third straight increase. Accounting for most of the July advance, prices for diesel fuel jumped 5.6 percent.

Intermediate core: Prices for intermediate materials less foods and energy moved down 0.3 percent in July after a 0.1-percent increase in the previous month. More than half of the decrease can be traced to a 1.4-percent drop in the index for industrial chemicals. Lower prices for nonferrous metals and fertilizer materials also contributed to the decline in the intermediate core index.

Crude goods

The Producer Price Index for crude materials for further processing advanced 1.2 percent in July. For the 3-month period ended in July, prices for crude materials rose 3.5 percent after falling 2.3 percent from January to April. In July, the monthly increase in the crude goods index is attributable to prices for crude energy materials, which climbed 4.0 percent. By contrast, the indexes for crude foodstuffs and feedstuffs and for crude nonfood materials less energy declined 1.1 percent and 0.3 percent, respectively. (See table B.)

Crude energy: Prices for crude energy materials increased 4.0 percent in July. From April to July, the index for crude energy materials rose 9.5 percent subsequent to a 1.3-percent decline for the 3 months ended in April. In July, the monthly rise is mostly due to a 10.6-percent jump in crude petroleum prices. Higher prices for coal also contributed to the increase in the crude energy index. (See table 2.)

Crude foods: The index for crude foodstuffs and feedstuffs moved down 1.1 percent in July. From April to July, the index for crude foods rose 0.6 percent following a 2.9-percent decrease for the 3 months ended in April. Over seventy percent of the monthly decline in July is attributable to raw milk prices, which fell 5.9 percent. Lower prices for slaughter chickens also were a factor in the decrease in the crude foodstuffs and feedstuffs index.

Crude core: The index for crude nonfood materials less energy moved down 0.3 percent in July. For the 3 months ended in July, crude core prices fell 2.5 percent compared with a 2.2-percent decline from January to April. The monthly decrease in July is mostly the result of a 2.9-percent drop in the index for nonferrous metals. Lower prices for corn also contributed to the decline in the crude core index.

Services Analysis

Trade industries: The Producer Price Index for the net output of total trade industries edged up 0.1 percent in July following a 0.5-percent decrease in June. (Trade indexes measure changes in margins received by wholesalers and retailers.) Leading the advance, margins received by the industry for merchant wholesalers of durable goods rose 1.0 percent. Higher margins received by grocery stores and gasoline stations with convenience stores also contributed to the increase in the total trade industries index.

Transportation and warehousing industries: The Producer Price Index for the net output of transportation and warehousing industries was unchanged in July after rising 0.6 percent in June. In July, higher prices received by the scheduled air transportation industry group and the crude petroleum pipeline industry offset falling prices for freight transportation arrangement and for couriers and express delivery services.

Services less trade, transportation, and warehousing: The Producer Price Index for the net output of services less trade, transportation, and warehousing inched up 0.1 percent in July following a 0.4-percent rise in June. Leading the July advance, prices received by the industry for investment banking and securities dealing climbed 3.6 percent. Higher prices received by the accommodation industry group and by general medical and surgical hospitals also contributed to the advance in the index for services less trade, transportation, and warehousing.

Resampling of Industries

Effective with this report, the Producer Price Index (PPI) includes data for 33 resampled industries classified according to the 2012 North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

Producer Price Index to Transition from Stage-of-Processing to Final Demand-Intermediate Demand Aggregation System

Effective with the January 2014 PPI data release in February 2014, BLS will transition from the Stage of Processing (SOP) to the Final Demand-Intermediate Demand (FD-ID) aggregation system. This shift will result in significant changes to the PPI news release, as well as other documents available from PPI. The transition to the FD-ID system is the culmination of a long-standing PPI objective to improve the current SOP aggregation system by incorporating PPIs for services, construction, government purchases, and exports. In comparison to the SOP system, the FD-ID system more than doubles current PPI coverage of the United States economy to over 75 percent of in-scope domestic production. The FD-ID system was introduced as a set of experimental indexes in January 2011. Nearly all new FD-ID goods, services, and construction indexes provide historical data back to either November 2009 or April 2010, while the indexes for goods that correspond with the historical SOP indexes go back to the 1970s or earlier.

The FD-ID system will highlight the index for final demand, which measures price changes for goods, services, and construction sold to final demand: personal consumption, capital investment, government purchases, and exports. The composition of products in the final demand price index differs from that of the finished goods index in two major respects. First, it includes government purchases and exports. Second, it includes services and construction, which are not reflected in finished goods.

The FD-ID system also includes two separate parallel treatments of intermediate demand: price changes for goods, services, and construction sold to business as inputs to production. The first treatment, intermediate demand by commodity type, measures price changes based on similarity of product and includes aggregate indexes for processed goods for intermediate demand, unprocessed goods for intermediate demand, and services for intermediate demand.

The second treatment, intermediate demand by production flow, is a stage-based system of price indexes, where price changes for goods, services, and construction can be studied as they move through the production chain of the economy to final demand. This treatment includes four stages of intermediate demand, which were established to maximize forward flow of production through the economy, while minimizing backflow of production.

These FD-ID indexes are constructed using PPI commodity indexes for goods, services, and construction, where products are assigned to various categories according to buyer type and level of fabrication. A product purchased by different classes of buyers is assigned to multiple FD-ID aggregates, with unique weights allocated to each aggregate based on the product's value of shipments to each buyer type.

To assist with the transition to the FD-ID system, PPI will provide, on a monthly basis, a version of the PPI news release based on the FD-ID model, starting with the publication of July 2013 data in August. The document will be labeled "Experimental" through the December release in January 2014 and will be posted to the PPI Experimental Aggregation webpage about two weeks after each month's scheduled PPI release. That webpage**, http://www.bls.gov/ppi/experimentalaggregation.htm**, also contains detailed methodological information for the FD-ID aggregation system. With the publication of January 2014 data in February 2014, the FD-ID version of the PPI news release will become the official news release document of record.

Further information also is available from the PPI Section of Index Analysis and Public information, at **ppi-info@bls.gov** or (202) 691-7705.

1 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

2 The indexes for March 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3 Includes crude petroleum.

4 Excludes crude petroleum.

5 Percent of total finished goods.

6 Percent of total intermediate materials.

7 Formerly titled ″Crude materials for further processing, excluding crude foodstuffs and feedstuffs, plant and animal fibers, oilseeds, and leaf tobacco.″

8 Percent of total crude materials.

1 Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2 The indexes for March 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

2 Due to incomplete coverage of the services sector, some services indexes in this table reflect only a portion of their wherever-provided output. These indexes are flagged using the term "partial" at the end of their titles. For more information regarding wherever-provided services indexes, go to www.bls.gov/ppi/wepnotice.htm. This webpage includes methodology documentation, a table identifying missing coverage areas for those indexes with incomplete coverage, and a concordance table between wherever-provided services indexes and Census product codes.

1 Indexes in this table are derived from the primary product indexes in table 5 that are weighted using 2002 input/output relationships. These indexes only include inputs to construction which are produced by the mining and manufacturing sectors of the economy excluding capital equipment. Since they do not include labor and capital costs, these indexes should not be regarded as comprehensive measures of construction costs. See note on page 190 of the July 1986 issue of Producer Price Indexes.

2 The indexes for March 2013 have been recalculated to incorporate late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

1 Further information about these experimental producer price indexes is available online at http://www.bls.gov/ppi/experimentalaggregation.htm

2 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

3 The indexes for March 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

4 PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

5 Trade indexes measure changes in margins received by wholesalers and retailers.

6 Indexes in this table are seasonally adjusted using the indirect seasonal adjustment method. However, this index presently is constructed using only component indexes that are not seasonally adjusted. Therefore, other than potential differences in index levels and related rounding differences in percentage changes, the unadjusted and seasonally adjusted versions of this index currently are indentical.

7 The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on- premises and off-premises consumption.

8 Distributive services include transportation, warehousing, and trade of goods.

1 Further information about these experimental producer price indexes is available online at http://www.bls.gov/ppi/experimentalaggregation.htm

2 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

3 The indexes for March 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

4 Indexes in this table are seasonally adjusted using the indirect seasonal adjustment method. However, this index presently is constructed using only component indexes that are not seasonally adjusted. Therefore, other than potential differences in index levels and related rounding differences in percentage changes, the unadjusted and seasonally adjusted versions of this index currently are identical.

Technical Note

Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 9,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the construction, trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

Commodity Indexes

The commodity classification structure of the PPI organizes goods and services by similarity of material composition or end use, disregarding their industry of origin. Table 6 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major commodity groupings (two-digit commodity codes), subgroups (three-digit codes), product classes (four-digit codes), subproduct classes (five- and six-digit codes), item groupings (seven-digit codes) and individual items (eight-, nine-, and ten-digit codes).

Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), and more detailed subproducts (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted via mail, fax, and the Internet.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 2007 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2007 through December 2011, PPI weights were derived from 2002 shipment values. Industry indexes now are calculated under the 2012 NAICS structure utilizing 2007 value of shipment weights and 2002

net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is comprised of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct for this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in the *BLS Handbook of Methods* (July 2010). This chapter can be downloaded from the BLS Web site at **www.bls.gov/opub/hom/homch14.htm**.

Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of finished goods have risen from $100 in 1982 to $105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

Index point change

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation and Producer Price Indexes: A Guide for Contracting Parties,* BLS Report 807, September 1991, on the Web at **www.bls.gov/ppi/ppiescalation.htm**.

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-

processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of almost 300 seasonally adjusted series, only 27 were subject to intervention in 2009.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (July 2010) and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 2.1 million instances of PPI series being downloaded from the Internet during the 12 months ended December 31, 2008.

Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address (**www.bls.gov/ppi**). Clicking on the "PPI Databases" link reveals the following methods of data retrieval:

- ***Top Picks*** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods).Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.

- ***One-Screen Data Search*** *and* ***Multi-Screen Data Search*** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification system by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Users can modify the date range and output options after executing the query using the reformat button above the data output table.

- ***Series Report*** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at a time.

  There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a "u" (not seasonally adjusted) or an "s" (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

EXAMPLES

For commodity and stage-of-processing indexes, series identifiers combine a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) with a commodity code.

Commodity code	*Provides data for:*
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpusop3000	Finished goods, not seasonally adjusted

For discontinued commodity indexes, series identifiers combine a "wdu" prefix (not seasonally adjusted) or a "wds" prefix (seasonally adjusted) with a commodity code.

Commodity code	*Provides data for:*
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

Current price indexes grouped by industry according to NAICS have series identifiers that begin with the prefix "pcu." After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code, current NAICS series	*Provides data for:*
pcu325---325---	Chemical manufacturing, not seasonally adjusted
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice
pcu325412325412A	Pharmaceutical preparation manufacturing, pharmaceuticals acting on the respiratory system

Discontinued industry-product codes based on SIC combine a "pdu" prefix and "#" between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS.)

Industry-product code, discontinued SIC series	*Provides data for:*
pdu28__#	Chemicals and allied products, not seasonally adjusted
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted
pdu3711#111	Passenger cars

Price indexes for discontinued series grouped by industry according to NAICS have identifiers that begin with the prefix "ndu." After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level industry group codes.

Industry-product code, discontinued NAICS series	*Provides data for*
ndu212231212231	Lead ore and zinc ore mining
ndu2122312122312	Lead and zinc concentrates
ndu212231212231214	Lead concentrates

- ***Text Files (FTP)*** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP sites can be accessed at **ftp://ftp.bls.gov** or directly from the links on the "PPI Databases" page or the PPI homepage. Data and documentation available for download include the following:

	Directory:
Industry Data	**/pub/time.series/pc**
Industry Data - Discontinued (NAICS basis)	**/pub/time.series/nd**
(SIC basis)	**/pub/time.series/pd**
Commodity Data	**/pub/time.series/wp**
Commodity Data - Discontinued Series	**/pub/time.series/wd**
Special requests	**/pub/special.requests/ppi**

The FTP site maintains files to help with searches and downloads. These files are centrally located in the **/pub/doc** directory. Within this directory, the **overview.txt** file contains an overview relating to all BLS data available through the FTP site. For current commodity-based PPI data, the program help file is **wp.txt;** for discontinued commodity series, **wd.txt;** for current industry-based PPI data based on NAICS, **pc.txt;** for industry-based SIC time series that have been discontinued, **pd.txt;** and for industry-based NAICS series that have been discontinued, **nd.txt**.

Users who prefer downloading PPI datasets as individual ZIP files should go to the directory labeled **/pub/time.series/compressed/tape.format/** on the FTP site. This directory includes six PPI-specific ZIP files, one for each of the PPI databases—WP, WD, PC, ND, and PD—and a ZIP file for the annual 5-year revision to historical seasonal PPIs.

Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (**www.bls.gov**). Clicking on the "Databases & Tools" tab at the top of the homepage calls up a listing all available BLS programs.

Additional information

The PPI homepage (**www.bls.gov/ppi**) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The "Tables Created by BLS" section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.
